Scientific Computing On Itanium-based Systems:

Scientific Computing on Itanium-based Systems Marius Cornea, John Harrison, Ping Tak Peter Tang, 2002 Covering key and unique architectural features of the Itanium processor that make it the platform of choice for high quality numerical software this reference provides numerous examples of typical floating point computations *Itanium Architecture for Programmers* James S. Evans, Gregory L. Trimper, 2003 Step by step guide to assembly language for the 64 bit Itanium processors with extensive examples Details of Explicitly Parallel Instruction Computing EPIC Instruction set addressing register stack engine predication I O procedure calls floating point operations and more Learn how to comprehend and optimize open source Intel and HP UX compiler output Understand the full power of 64 bit Itanium EPIC processors Itaniumreg Architecture for Programmers is a comprehensive introduction to the breakthrough capabilities of the new 64 bit Itanium architecture Using standard command line tools and extensive examples the authors illuminate the Itanium design within the broader context of contemporary computer architecture via a step by step investigation of Itanium assembly language Coverage includes The potential of Explicitly Parallel Instruction Computing EPIC Itanium instruction formats and addressing modes Innovations such as the register stack engine RSE and extensive predication Procedure calls and procedure calling mechanisms Floating point operations I O techniques from simple debugging to the use of files Optimization of output from open source Intel and HP UX compilers An essential resource for both computing professionals and students of architecture or assembly language Itanium Architecture for Programmers includes extensive printed and Web based references plus many numeric essay and programming exercises for each chapter **Formal Methods for Hardware Verification** Marco Bernardo, Alessandro Cimatti, 2006-05-15 This book presents 8 papers accompanying the lectures of leading researchers given at the 6th edition of the International School on Formal Methods for the Design of Computer Communication and Software Systems SFM 2006 SFM 2006 was devoted to formal techniques for hardware verification and covers several aspects of the hardware design process including hardware design languages and simulation property specification formalisms automatic test pattern generation symbolic trajectory evaluation and more *High Performance Computing in Science and Engineering, Garching/Munich 2009* Siegfried Wagner, Matthias Steinmetz, Arndt Bode, Markus Michael Müller, 2010-08-12 The Leibniz Supercomputing Centre LRZ and the Bavarian Competence Network for Technical and Scientific High Performance Computing KONWIHR publish in the present book results of numerical simulations facilitated by the High Performance Computer System in Bavaria HLRB II within the last two years The papers were presented at the Fourth Joint HLRB and KONWIHR Review and Status Workshop in Garching on 8th and 9th December 2009 and were selected from all progress reports of projects that use the HLRB II Similar to the workshop two years ago the majority of the contributed papers belong to the area of computational fluid dynamics CFD condensed matter physics astrophysics chemistry computer sciences and high energy physics We note a considerable increase of the user community in

some areas Compared to 2007 the number of papers increased from 6 to 12 in condensed matter physics and from 2 to 5 in high energy physics Bio sciences contributed only one paper in 2007 but four papers in 2009 This indicates that the area of application of supercomputers is continuously growing and entering new elds of research The year 2007 saw two major events of particular importance for the LRZ First after a substantial upgrade with dual core processors the SGI Altix 4700 superc puter reached a peak performance of more than 62 Tera op s And second the n pro t organization Gauss Centre for Supercomputing e V GCS was founded on April 13th

Embedded Cryptographic Hardware Nadia Nedjah,Luiza de Macedo Mourelle,2005 Data security is an important requirement for almost all if not all information oriented applications such as e commerce digital signature secure Internet etc All these services use encrypted data Cryptography is a milliner science that was the key to the secret of ancient Rome and a fundamental piece in the Second World War Today it is a star in the computation world Several operating systems data base systems or simple filling systems provide the user with cryptographic functions that allow controlled data scrambling Modern cryptology which is the basis of information security techniques started in the late 1970 s and developed in the 1980 s As communication networks were spreading deep into society the need for secure communication greatly promoted cryptographic research The need for fast but secure cryptographic systems is growing bigger Therefore dedicated hardware for cryptography is becoming a key issue for designers With the spread of reconfigurable hardware such as FPGAs hardware implementations of cryptographic algorithms became cost effective The focus of this book is on all aspects of cryptographic hardware and embedded systems This includes design implementation and security of such systems The content of this book is divided into four main parts each of which is organised in three chapters with the exception of the last one
