*Scientific Computing on Vector Computers* Willi Schönauer, 1987 The goal of this volume is to gradually guide the reader from his usual base of general purpose computer knowledge to the highly specialized knowledge necessary for the efficient use of vector computers The basic rules for the selection of optimal data structures and algorithms for vector computers are presented The properties of the hardware and software of the following vector computers are discussed in the context of measurements CRAY 1 CRAY X MP CRAY 2 CYBER 205 ETA 10 Fujitsu VP 200 IBM VF and CONVEX C1 The FIDISOL program package developed by the author's research group is presented as an example of the full vectorization The advantages and the deficiencies of the most relevant vector computers are stressed Related questions of a large general purpose software package for vector computers are also discussed

*The Science of Computer Benchmarking* Roger W. Hockney, 1996-01-01 This book provides an introduction to computer benchmarking Hockney includes material concerned with the definition of performance parameters and metrics and defines a set of suitable metrics with which to measure performance and units with which to express them He also presents new ideas resulting from the application of dimensional analysis to the field of computer benchmarking This results in the definition of a dimensionless universal scaling diagram that completely describes the scaling properties of a class of computer benchmarks on a single diagram for all problem sizes and all computers describable by a defined set of hardware parameters

**Scientific Computing on Supercomputers II** J.T. Devreese, 2012-12-06 The International Workshop on The Use of Supercomputers in Theoretical Science took place on November 29 and 30 1989 at the University of Antwerp UIA Antwerpen Belgium It was the fifth in a series of workshops the first of which took place in 1984 The principal aim of these workshops is to present the state of the art in scientific large scale and high speed computation Computational science has developed into a third methodology equally important now as its theoretical and experimental companions Gradually academic researchers acquired access to a variety of supercomputers and as a consequence computational science has become a major tool for their work It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS and the Ministry of Scientific Affairs for sponsoring the workshop It was organized both in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers and the

Gouvernemental Program in Information Technology We also very much would like to thank the University of Antwerp Universitaire Instelling Antwerpen UIA for financial and material support Special thanks are due to Mrs H Evans for the typing and editing of the manuscripts and for the preparation of the author and subject index Scientific Computing on Supercomputers J.T. Devreese, P.E. Van Camp, 2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences Regrettably access to supercomputers remains limited for academic researchers Nonetheless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection Scientific Computing on Supercomputers III J.T. Van Camp, 2013-06-29 The International Workshop on The Use of Supercomputers in Theoretical Science took place on January 24 and 25 1991 at the University of Antwerp UIA Antwerpen Belgium It was the sixth in a series of workshops the first of which took place in 1984 The principal aim of these workshops is to present the state of the art in scientific large scale and high speed computation Computational science has developed into a third methodology equally important now as its theoretical and experimental companions Gradually academic researchers acquired access to a variety of supercomputers and as a consequence computational science has become a major tool for their work It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS and the Ministry of Scientific Affairs for sponsoring the workshop It was organized both in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers and the Gouvernemental Program in Information Technology We also very much would like to thank the University of Antwerp Universitaire Instelling Antwerpen UIA for financial and material support Special thanks are due to Mrs H Evans for the typing and editing of the manuscripts and for the preparation of the author and subject indexes J T Devreese P E Van Camp University of Antwerp July 1991 v CONTENTS High Performance Numerically Intensive Applications on Distributed Memory Parallel Computers F W Wray Abstract *Advances in Software Tools for Scientific Computing* Hans P. Langtangen, Are M. Bruaset, Ewald Quak, 2012-12-06 To make full use of the ever increasing hardware capabilities of modern computers it is

necessary to speedily enhance the performance and reliability of the software as well and often without having a suitable mathematical theory readily available In the handling of more and more complex real life numerical problems in all sorts of applications a modern object oriented design and implementation of software tools has become a crucial component The considerable challenges posed by the demand for efficient object oriented software in all areas of scientific computing make it necessary to exchange ideas and experiences from as many different sources as possible Motivated by the success of the first meeting of this kind in Norway in 1996 we decided to organize another International Workshop on Modern Software Tools for Scientific Computing often referred to as SciTools 98 This workshop took place in Oslo Norway September 14 16 1998 The objective was again to provide an open forum for exchange and discussion of modern state of the art software techniques applied to challenging numerical problems The organization was undertaken jointly by the research institute SINTEF Applied Mathematics the Departments of Mathematics and Informatics at the University of Oslo and the company Numerical Objects AS

**A Journey through the History of Numerical Linear Algebra** Claude Brezinski, Gérard Meurant, Michela Redivo-Zaglia, 2022-12-06 This expansive volume describes the history of numerical methods proposed for solving linear algebra problems from antiquity to the present day The authors focus on methods for linear systems of equations and eigenvalue problems and describe the interplay between numerical methods and the computing tools available at the time The second part of the book consists of 78 biographies of important contributors to the field A Journey through the History of Numerical Linear Algebra will be of special interest to applied mathematicians especially researchers in numerical linear algebra people involved in scientific computing and historians of mathematics

*Computer Solution of Large Linear Systems* Gerard Meurant, 1999-06-16 This book deals with numerical methods for solving large sparse linear systems of equations particularly those arising from the discretization of partial differential equations It covers both direct and iterative methods Direct methods which are considered are variants of Gaussian elimination and fast solvers for separable partial differential equations in rectangular domains The book reviews the classical iterative methods like Jacobi Gauss Seidel and alternating directions algorithms A particular emphasis is put on the conjugate gradient as well as conjugate gradient like methods for non symmetric problems Most efficient preconditioners used to speed up convergence are studied A chapter is devoted to the multigrid method and the book ends with domain decomposition algorithms that are well suited for solving linear systems on parallel computers
