Models of Scientific Development and the Case of Nuclear Magnetic Resonance Henk Zandvoort, 2012-12-06 From the nineteen sixties onwards a branch of philosophy of science has come to development called history oriented philosophy of science This development constitutes a reaction on the then prevailing logical empiricist conception of scientific knowledge The latter was increasingly seen as suffering from insurmountable internal problems like e.g. the problems with the particular observational theoretical distinction on which it drew In addition the logical empiricists general approach was increasingly criticized for two external shortcomings Firstly the examples of scientific knowledge that the logical empiricists were focusing on were considered as too simplistic to be informative on the nature of real life science Secondly it was felt that the attention of these philosophers of science was restricted to the static aspects of scientific knowledge while neglecting its developmental aspects History oriented philosophy of science has taken up the challenge implicit in the latter two criticisms i.e. to develop accounts of science that would be more adequate for understanding the development of real life science One of the more successful products of this branch of philosophy of science is Lakatos's theory of scientific development sometimes called the methodology of scientific research programmes This theory conceives science as consisting of so called research programmes developing in time and competing with each other over the issue which one generates the best explanations of the phenomena that they address *E-Business.
