The Accountant's Tale Andrew P.

Porter, 2021-06-08 Three problems in the life of the church 1 For the past millennium theologians have done a brisk trade in

proofs arguments for the so called existence of God the validity of the Christian faith and so on I think this is a mistake

Christianity is a choice 2 Typical Christian theology begins with Jesus rather than with the Common Documents the

documents shared in common by Christianity and rabbinic Judaism This is Marcionite Theology so called for a second century

figure who wanted to delete the Common Documents from the Bible Many problems in theology become much more tractable

if the Common Documents the Exodus focally are treated as a model rather than as a mere prologue to the New Testament 3

There are problems with God interfering with nature and they have become worse with modern science God interfering with

nature doesn't just injure the sciences it also generates serious pathologies in theology The theme is choices made by the

church and the book is called *The Accountant's Tale* because somebody once asked an accountant What is two times two and

got the answer What do you want it to be

Rhyme and Reason Juan Uriagereka, 2000

This unusual book takes the form of a dialogue between a linguist and another scientist This unusual book takes the form of a

dialogue between a linguist and another scientist The dialogue takes place over six days with each day devoted to a

particular topic and the ensuing digressions The role of the linguist is to present the fundamentals of the minimalist program

of contemporary generative grammar Although the linguist serves essentially as a voice for Noam Chomsky's ideas he is not

intended to be a portrait of Chomsky himself The other scientist functions as a kind of devil's advocate making the arguments

that linguists tend to face from those in the harder sciences The author does far more than simply present the minimalist program He conducts a running argument over the status of theoretical linguistics as a natural science He raises the general issues of how we conceive words phrases and transformations and what these processes tell us about the human mind He also attempts to reconcile generative grammar with the punctuated equilibrium version of evolutionary theory In his foreword Massimo Piatelli Palmarini says The vast number of readers who have been enthralled by Goedel Escher Bach may well like also this syntactic companion a sort of Chomsky Fibonacci Bach

Realizing Reason Danielle Macbeth, 2014-03-27 Realizing Reason pursues three interrelated themes First it traces the essential moments in the historical unfolding from the ancient Greeks through Descartes Kant and developments in the nineteenth century to the present that culminates in the realization of pure reason as a power of knowing Second it provides a cogent account of mathematical practice as a mode of inquiry into objective truth And finally it develops and defends a new conception of our being in the world one that builds on and transforms the now standard conception according to which our experience of reality arises out of brain activity due in part to merely causal impacts on our sense organs Danielle Macbeth shows that to achieve an adequate understanding of the striving for truth in the exact sciences we must overcome this standard conception and that the way to do that is through a more adequate understanding of the nature of mathematical practice and the profound transformations it has undergone over the course of its history the history through which reason is first realized as a power of knowing Because we can understand mathematical practice only if we attend to the systems of written signs within which to do mathematics Macbeth provides an account of the nature and role of written notations specifically of the principal systems that have been developed within which to reason in mathematics Euclidean diagrams the symbolic language of arithmetic and algebra and Frege's concept script Begriffsschrift
