W. C. McKern and the Midwestern Taxonomic Method R. Lee Lyman, Michael J. O'Brien, 2003 Explores W C McKern's use of Linnaean taxonomy as the model for development of a pottery classification system By the early 20th century North American archaeologists had found evidence of a plethora of prehistoric cultures displaying disparate geographic and chronological distributions But there were no standards or algorithms for specifying when a culture was distinct or identical to another in a nearby or distant region Will Carleton McKern of the Milwaukee Public Museum addressed this fundamental problem of cultural classification beginning in 1929 He modeled his solution known as the Midwestern Taxonomic Method on the Linnaean biological taxonomy because he wanted the ability to draw historical and cultural relationships among cultures McKern was assisted during development of the method by Carl E Guthe Thorne Deuel James B Griffin and William Ritchie This book studies the 1930s correspondence between McKern and his contemporaries as they hashed out the method's nuances It compares the several different versions of the method and examines the Linnaean biological taxonomy as it was understood and used at the time McKern adapted it to archaeological problems Finally this volume reveals how and why the method failed to provide the analytical solution envisioned by McKern and his colleagues and how it influenced the later development of Americanist archaeology
