Curricula and Instructional Procedures for Severely Handicapped Students

Doug Guess and Mary Jo Noonan

Educational instruction among severely handicapped students is an effort barely 15 years old. During this brief history, curriculum development has followed several paths in attempting to identify content and methodology that will meet the needs of a population having severe skill deficits, maladaptive behaviors, and slow rates of achievement. After reviewing and analyzing the major curricula and instructional procedures that have evolved from various theoretical positions, we will give some suggestions for redirections in the field.

THE DEVELOPMENTAL APPROACH

Traditionally, curricula for the severely handicapped have been developmental — designed to replicate the normal sequence of development among handicapped students. Justification for the developmental approach rests on at least three assumptions: 1) normal development constitutes the most *logical* ordering of behaviors in a curriculum; 2) many behaviors within normal development are *prerequisite* behaviors; and 3) behaviors acquired at a particular age by a normal child are *appropriate* objectives for a severely handicapped student at the same level of development (Baldwin, 1976; Haring & Bricker, 1976; Stephens, 1977). On these premises, a multitude of chronologically sequenced behavior scales have been put forth as curricula for the severely handicapped. These curricula describe the "what to teach" and the order in which it should be taught.

Developmental Scales

Normal development serves as the outline of content in the developmental curriculum. Content is sequenced within behavior domains (e.g., gross motor, fine motor, language, social, and self-help) that function as both an assessment and the objectives of the curriculum. Because the assessment and objectives are one and the same, the curricula have been referred to as "assessment-linked" (Bricker, Bricker, Jacino, & Dennison, 1976; Gentry & Adams, 1978).

Doug Guess is a professor and Mary Jo Noonan a doctoral candidate in the Department of Special Education, University of Kansas.

Exceptional Children Integrating Research and Teaching provides a comprehensive introduction to the constantly changing area of special education The book is research based and its title reflects our opinion regarding the important link between research and classroom practice There is one feature of **Exceptional Children Integrating Research and Teaching** that warrants attention and perhaps justification it was written specifically to address the graduate student or sophisticated undergraduate student market As such the book is written at a higher level and with a greater concept density than typical introductory special education texts We feel that this type of book is very much needed and will be received favorably by the special education community There are also several unique features of **Exceptional Children Integrating Research and Teaching** that we feel will be quite valuable First we have emphasized the area of teaching practices and not simply included basic facts about definitions characteristics and causes Although some introductory texts include information about teaching considerations that area is not discussed as in depth as it is in our text We feel that it is important that readers not only understand the educational needs of exceptional children but also can identify the best educational practices to meet those needs
