Family and Population Changes in Singapore Wei-Jun Jean Yeung, Shu Hu, 2018-04-17 This book depicts the evolution of Singapore's family and population landscape in the last half a century, the related public policies and future challenges. Since the country gained independence in 1965, family and population policies have been integral to her nation building strategies. The chapters discuss the changes in population compositions, family structures, relations and values among major ethnic groups. They also discuss policies for vulnerable populations such as female headed households, cross cultural families, same sex partnering, the elderly and low income families.

Low and Lower Fertility Ronald R. Rindfuss, Minja Kim Choe, 2015-10-12 This volume examines two distinct low fertility scenarios that have emerged in economically advanced countries since the turn of the 20th century: one in which fertility is at or near replacement level and the other where fertility is well below replacement. It explores the way various institutions, histories and cultures influence fertility in a diverse range of countries in Asia, Europe, North America and Australia. The book features invited papers from the Conference on Low Fertility, Population Aging and Population Policy held December 2013 and co-sponsored by the East West Center and the Korea Institute for Health and Social Affairs (KIHASA). It first presents an overview of the demographic and policy implications of the two low fertility scenarios. Next, the book explores five countries currently experiencing low fertility rates: China, Hong Kong, Japan, Singapore and South Korea. It then examines three countries that have close to replacement level fertility: Australia, the Netherlands and the United States. Each country is featured in a separate chapter written by a demographer with expert knowledge in the area. Very low fertility is linked to a number of conditions countries face, including a declining population size. At the same time, low fertility and its effect on the age structure threatens social welfare policies. This book goes beyond the technical to examine the core institutional, policy and cultural factors behind this increasingly important issue. It helps readers to make cross country comparisons and gain insight into how diverse institutions, policies and culture shape fertility levels and patterns.

The Oxford Handbook of Asian Business Systems Michael A. Witt, Gordon Redding, 2014-01-30 Much of the existing literature within the varieties of capitalism VOC and comparative business systems fields of research is heavily focused on Europe Japan and the Anglo Saxon nations As a result the field has yet to produce a detailed empirical picture of the institutional structures of most Asian nations and to explore to what extent existing theory applies to the Asian context The Oxford Handbook of Asian Business Systems aims to address this imbalance by exploring the shape and consequences of institutional variations across the political economies of different societies within Asia Drawing on the deep knowledge of 32 leading experts this book presents an empirical comparative institutional analysis of 13 major Asian business systems between India and Japan To aid comparison each country chapter follows the same consistent outline Complementing the country chapters are eleven contributions examining major themes across the region in comparative perspective and linking the empirical picture to existing theory on these themes A further three chapters provide perspectives on the influence of history and institutional change The concluding chapters spell out the implications of all these chapters for scholars in the field and for business practitioners in Asia The Handbook is a major reference work for scholars researching the causes of

Long-Term Care around the World Jonathan Gruber, Kathleen McGarry, 2025-05-14 A comparative analysis of both formal and informal long term care in ten of the world's wealthiest countries Nations throughout the world are in the midst of an enormous demographic transition with life expectancy increasing and fertility falling leading to a rapidly aging population and critical implications for long term care around the world This volume documents and compares long term care programs in ten wealthy countries Analyses of survey data and government statistics show that the costs of long term care are beyond the financial means of a large fraction of the elderly population in most countries particularly the oldest and most disabled As a result public systems bear most of the cost of formal long term care such as care in an institution or paid home care Most countries spend more on nursing homes than on home care but this relationship varies widely as does the mix of care needs and resources used to define eligibility for public funding At the same time most care is provided informally through family or unpaid caregivers The costs of informal care including the foregone earnings of caregivers are estimated to account for at least one third of all long term care spending in every country Thus any estimate of the social costs of long term care must account for the implicit costs of informal care
