Magic Cancer Bullet How A Tiny Orange Pill Is Rewriting Medical History:

Magic Cancer Bullet Daniel Vasella, Robert Slater, 2003-06-03 History of the breakthrough of the cancer pill Gleevec

The Already Dead Eric Cazdyn, 2012-04-16 This book considers how a culture of crisis management what Cazdyn calls the new chronic has come to dominate all aspects of contemporary life from biomedicine to economics to politics Drawing from his own experiences battling leukemia and the subsequent effects of his illness on the process of becoming a Canadian citizen Cazdyn unravels the logic of the new chronic where people find themselves suspended in a space between life and death

The Truth in Small Doses Clifton Leaf, 2014-08-05 A decade ago Leaf a cancer survivor himself began to investigate why we had made such limited progress fighting this terrifying disease The result is a gripping narrative that reveals why the public's immense investment in research has been badly misspent why scientists seldom collaborate and share their data why new drugs are so expensive yet routinely fail and why our best hope for progress brilliant young scientists are now abandoning the search for a cure

Ways of Regulating Drugs in the 19th and 20th Centuries V. Hess, 2012-12-03 This collection takes the perspective that the historiography of science technology and medicine needs a broader approach toward regulation The authors explore the distinct social worlds involved in regulation the forms of evidence and expertise mobilized and means of intervention chosen to tame drugs in factories consulting rooms and courts

The Truth About the Drug Companies Marcia Angell, 2005-08-09 During her two decades at The New England Journal of Medicine Dr Marcia Angell had a front row seat on the appalling spectacle of the pharmaceutical industry She watched drug companies stray from their original mission of discovering and manufacturing useful drugs and instead become vast marketing machines with unprecedented control over their own fortunes She saw them gain nearly limitless influence over medical research education and how doctors do their jobs She sympathized as the American public particularly the elderly struggled and increasingly failed to meet spiraling prescription drug prices Now in this bold hard hitting new book Dr Angell exposes the shocking truth of what the pharmaceutical industry has become and argues for essential long overdue change Currently Americans spend a staggering 200 billion each year on prescription drugs As Dr Angell powerfully demonstrates claims that high drug prices are necessary to fund research and development are unfounded The truth is that drug companies funnel the bulk of their resources into the marketing of products of dubious benefit Meanwhile as profits soar the companies brazenly use their wealth and power to push their agenda through Congress the FDA and academic medical centers Zeroing in on hugely successful drugs like AZT the first drug to treat HIV AIDS Taxol the best selling cancer drug in history and the blockbuster allergy drug Claritin Dr Angell demonstrates exactly how new products are brought to market Drug companies she shows routinely rely on publicly funded institutions for their basic research they rig clinical trials to make their products look better than they are and they use their legions of lawyers to stretch out government granted exclusive marketing rights for years They also flood the market with copycat drugs that cost a lot more than the drugs they

mimic but are no more effective The American pharmaceutical industry needs to be saved mainly from itself and Dr Angell proposes a program of vital reforms which includes restoring impartiality to clinical research and severing the ties between drug companies and medical education Written with fierce passion and substantiated with in depth research The Truth About the Drug Companies is a searing indictment of an industry that has spun out of control *Cancer on Trial* Peter Keating, Alberto Cambrosio, 2014-04-18 There were no medical oncologists until a few decades ago In the early 1960s not only were there no such specialists many practitioners regarded the treatment of terminally ill cancer patients with heroic courses of chemotherapy as highly questionable Physicians loath to assign patients randomly to competing treatments also expressed their outright opposition to the randomized clinical trials that were then relatively rare And yet today these trials form the basis of medical oncology How did such a spectacular change occur How did medical oncology move from a non entity and in some regards a reviled practice to the central position it now occupies in modern medicine *Cancer on Trial* answers these questions by exploring how practitioners established a new style of practice at the center of which lies the cancer clinical trial **Personalised cancer medicine** Anne Kerr, Choon Key Chekar, Emily Ross, Julia Swallow, Sarah Cunningham-Burley, 2021-01-19 This electronic version has been made available under a Creative Commons BY NC ND open access license What does it mean to personalise cancer medicine Drawing on an ethnographic study with cancer patients carers and practitioners in the UK this book traces their efforts to access and interpret novel genomic tests information and treatments as they craft personal and collective futures Exploring multiple experiences of new diagnostic tests research programmes and trials advocacy and experimental therapies the authors chart the different kinds of care and work involved in efforts to personalise cancer medicine as well as the ways in which benefits and opportunities are unevenly realised and distributed Comparing these experiences with policy and professional accounts of the big future of personalised healthcare the authors show how hope and care are multi faceted contingent and at times frustrated in the everyday complexities of living and working with cancer *Making Sense* Sophie Mützel, 2022-12-06 Breast cancer is one of the most commonly diagnosed cancers and a leading cause of death for women worldwide With advances in molecular engineering in the 1980s hopes began to rise that a non toxic and non invasive treatment for breast cancer could be developed These hopes were stoked by the researchers biotech companies and analysts who worked to make sense of the uncertainties during product development In *Making Sense* Sophie Mützel traces this emergence of innovative breast cancer therapeutics from the late 1980s up to 2010 through the lens of the narratives of the involved actors Combining theories of economic and cultural sociology Mützel shows how stories are integral for the emergence of new markets stories of the future create a market of expectations prior to any existing products stories also help to create categories on what such a new market and its products are about *Making Sense* uses thousands of press statements media reports scientific reports and financial and industry analyses and combines qualitative and large scale computational text analyses to illustrate these mechanisms presenting a

fresh view of how life prolonging innovations can be turned into market products **The Emperor of All Maladies** Siddhartha Mukherjee, 2011-08-09 This edition includes a new interview with the author P 4 of cover The Evolution of Drug Discovery Enrique Ravina, 2011-04-18 The discovery and use of medicines is just as fascinating a human scientific endeavor as space flight or the tracing of human evolution It is also the everyday task of hundreds of thousands of pharmacists pharmaceutical chemists and researchers worldwide Based on his profound knowledge of past and present paradigms in the development of medicines Enrique Ravina takes the reader from the very beginnings of pharmacology to the multibillion dollar business it represents today Recounting the often spectacular successes and failures of innovative drugs as well as the people who discovered them he brings abstract science to life in anecdotal form For anyone with a more than superficial interest in the science of drugs and all those interested in knowing how drugs have been developed how they have reached us and became part of our daily life This book is beautifully illustrated containing many rare and historical photographs of drugs and their discoverers and abounds with references to the primary literature listing seminal publications alongside more modern reviews for readers seeking further details With a Foreword by Hugo Kubinyi **3D Cell-Based Biosensors in Drug Discovery Programs** William S. Kisaalita, 2010-06-22 Advances in genomics and combinatorial chemistry during the past two decades inspired innovative technologies and changes in the discovery and pre clinical development paradigm with the goal of accelerating the process of bringing therapeutic drugs to market Written by William Kisaalita one of the foremost experts in this field **3D Cell Based Bio Cancer Patients, Cancer Pathways C.** Timmermann, E. Toon, 2012-10-10 Eleven essays by historians and sociologists examine cancer research and treatment as everyday practice in post war Europe and North America These are not stories of inevitable medical progress and obstacles overcome but of historical contingencies cultural differences hope and often disappointed expectations Lung Cancer and Mesothelioma Howard A. Gutman, 2011-06-17 Lung Cancer and Mesothelioma is a comprehensive reference for lung cancer patients and their families The book reviews chemotherapy radiation surgery gene therapy cancer stages and many other critical topics Written in a detailed but understandable fashion Learn how chemotherapy works why non small cell and small cell cancer are categorized separately and how the new gene work The book review many recent studies and covers Iressa and other new drugs The appendix contains detailed ratings of over 600 hospitals across the United States **The Momentum Effect ePub** Jean Claud Larreche, 2013-10-03 One of the most frequent challenges that managers and executives face today is How do I keep on growing and at the same time make a profit Based on the author s extensive research on over 350 Fortune 1000 Firms The Momentum Effect proves that the old method of spending big on marketing and slashing the manufacturing costs doesn t work anymore Instead it provides new evidence to show that in order to achieve profitable growth you have to create new value for customers through innovation ingenuity and most importantly by seeing things from a customer perspective This strategy generates a positive reinforcing momentum which leads to further

growth Why limit your business growth With Momentum you won't have to *Inside the FDA* Fran Hawthorne, 2010-12-13

The forces that shape America's most powerful consumer agency Because of the importance of what it regulates the FDA comes under tremendous political industry and consumer pressure But the pressure goes far beyond the ordinary lobbying of Washington trade groups Its mandate one quarter of the national economy brings the FDA into the middle of some of the most important and contentious issues of modern society From designer babies and abortion to the price of prescription drugs and the role of government itself *Inside the FDA* takes readers on an intriguing journey into the world of today's most powerful consumer agency In a time when companies continue to accuse the FDA of nitpicking and needlessly delaying needed new drugs and consumers are convinced that the agency bends to industry pressure by rushing unsafe drugs to market *Inside the FDA* digs deep to reveal the truth Through scores of interviews and real world stories Hawthorne also shows how and why the agency makes some of its most controversial decisions as well as how its recent reaction to certain issues including the revolutionary cancer drug Erbitux stem cell research and bioengineering of food may jeopardize its ability to keep up with future scientific developments *Inside the FDA* takes a closer look at the practices people and politics of this crucial watchdog in light of the competing pressures and trends of modern society revealing what the FDA is supposed to do what it actually does and fails to do who it influences and how it could better fulfill its mandate The decisions that the FDA makes are literally life and death *Inside the FDA* provides a sophisticated account of how this vitally important agency struggles to balance bureaucracy and politics with its overriding mission to promote the country's health **Laughing Gas, Viagra, and Lipitor** Jie Jack Li, 2006-09-07 This is a book on the history of drug discovery that highlights the intellectual splendor of discoverers as well as the human frailty associated with them **Tyranny of the Gene** James Tabery, 2023-08-15 A revelatory account of how power politics and greed have placed the unfulfilled promise of personalized medicine at the center of American medicine The United States is embarking on a medical revolution Supporters of personalized or precision medicine the tailoring of health care to our genomes have promised to usher in a new era of miracle cures Advocates of this gene guided health care practice foresee a future where skyrocketing costs can be curbed by customization and unjust disparities are vanquished by biomedical breakthroughs Progress however has come slowly and with a price too high for the average citizen In *Tyranny of the Gene* James Tabery exposes the origin story of personalized medicine essentially a marketing idea dreamed up by pharmaceutical executives and traces its path from the Human Genome Project to the present revealing how politicians influential federal scientists biotech companies and drug giants all rallied behind the genetic hype The result is a medical revolution that privileges the few at the expense of health care that benefits us all Now American health care driven by the commercialization of biomedical research is shifting focus away from the study of the social and environmental determinants of health such as access to fresh and nutritious food exposure to toxic chemicals and stress caused by financial insecurity Instead it is increasingly investing in miracle pills for leukemia that would

bankrupt most users genetic studies of minoritized populations that ignore structural racism and walk dangerously close to eugenic conclusions and oncology centers that advertise the perfect gene drug match igniting a patient's hope and often dashing it later Tyranny of the Gene sounds a warning cry about the current trajectory of health care and charts a path to a more equitable alternative

Sympathy for the Devil Gary Acton, 2013-06-13 Gary Acton is a London oncologist and his book offers a unique insight into the chaotically unpredictable world of cancer medicine and the biotechnology industry Sympathy For The Devil is the account of one company struggling to survive as all their experimental cancer drugs fail Now they only have one left Battling for their existence turns into a race against time in an adventure taking them from New York to New Delhi This is a tragicomic true story frequently bordering on the surreal It reveals for the first time the extraordinary world inhabited by the people involved in cancer drug development It's a place where money medicine and magic all collide You need the luck of the Devil to survive A similar set of ethics comes in handy too One in three of us will contract cancer and need treatment This book opens a door on where those drugs come from A successful new cancer agent costs 100 million and takes ten years to develop And yet despite all that time and effort to get it right only a tiny fraction make it to the clinic This book examines what's going wrong and why so many drugs don't survive that arduous journey Biotechnology today has become a cancer casino with success or failure determined as much by a throw of the dice as design or decision Sympathy For The Devil reveals the disturbing implications of this for all of us now and into the future
