Maize Improvement Shabir Hussain Wani, Zahoor Ahmad Dar, Gyanendra Pratap Singh, 2023-03-10 Maize is one of the most generally grown cereal crops at global level followed by wheat and rice Maize is the major crop in China both in terms of yield and acreage In 2012 worldwide maize production was about 840 million tons Maize has long been a staple food of most of the global population particularly in South America and Africa and a key nutrient resource for animal feed and for food industrial materials Maize belts vary from the latitude 58 north to the latitude 40 south and maize ripens every month of the year Abiotic and biotic stresses are common in maize belts worldwide Abiotic stresses chiefly drought salinity and extreme temperatures together with biotic stresses primarily fungi viruses and pests

negatively affect maize growth development production and productivity In the recent past intense droughts waterlogging and extreme temperatures have relentlessly affected maize growth and yield In China 60% of the maize planting area is prone to drought and the resultant yield loss is 20% 30% per year in India 25% 30% of the maize yield is lost as a result of waterlogging each year The biotic stresses on maize are chiefly pathogens fungal bacterial and viral and the consequential syndromes like ear stalk rot rough dwarf disease and northern leaf blight are widespread and result in grave damage Roughly 10% of the global maize yield is lost each year as a result of biotic stresses For example the European corn borer ECB *Ostrinia nubilalis* H bner causes yield losses of up to 2000 million dollars annually in the USA alone in the northern regions of China the maize yield loss reaches 50% during years when maize badly affected by northern leaf blight In addition abiotic and biotic stresses time and again are present at the same time and rigorously influence maize production To fulfill requirements of each maize growing situation and to tackle the above mentions stresses in an effective way sensibly designed multidisciplinary strategy for developing suitable varieties for each of these stresses has been attempted during the last decade Genomics is a field of supreme significance for elucidating the genetic architecture of complex quantitative traits and characterizing germplasm collections to achieve precise and specific manipulation of desirable alleles genes Advances in genotyping technologies and high throughput phenomics approaches have resulted in accelerated crop improvement like genomic selection speed breeding particularly in maize Molecular breeding tools like collaborating all omics has led to the development of maize genotypes having higher yields improved quality and resilience to biotic and abiotic stresses Through this book we bring into one volume the various important aspects of maize improvement and the recent technological advances in development of maize genotypes with high yield high quality and resilience to biotic and abiotic stresses

The Maize Genome Jeffrey Bennetzen, Sherry Flint-Garcia, Candice Hirsch, Roberto Tuberosa, 2018-11-24 This book discusses advances in our understanding of the structure and function of the maize genome since publication of the original B73 reference genome in 2009 and the progress in translating this knowledge into basic biology and trait improvement Maize is an extremely important crop providing a large proportion of the world s human caloric intake and animal feed and serving as a model species for basic and applied research The exceptionally high level of genetic diversity within maize presents opportunities and challenges in all aspects of maize genetics from sequencing and genotyping to linking genotypes to phenotypes Topics covered in this timely book range from i genome sequencing and genotyping techniques ii genome features such as centromeres and epigenetic regulation iii tools and resources available for trait genomics to iv applications of allele mining and genomics assisted breeding This book is a valuable resource for researchers and students interested in maize genetics and genomics

Biotechnological and genomic approaches for enhancing agronomic performance of crops Sreepriya Pramod, Ramsey Steven Lewis, Reyazul Rouf Mir, Himabindu Kudapa, 2023-04-05

Ngecha Carolyn P. Edwards, Beatrice Blyth Whiting, 2004-01-01 Ngecha is the monumental and intimate study of modernization and

nationalization in rural Africa in the early years following Kenyan independence in 1963 as experienced by the people of Ngecha a village outside Nairobi From 1968 to 1973 Ngecha was a research site of the Child Development Research Unit a team that brought together Kenyan and non Kenyan social scientists under the leadership of John Whiting and Beatrice Blyth Whiting The study documents how families adapted to changing opportunities and conditions as their former colony became a modern nation and the key role that women played as agents of change as they became small scale cash crop farmers and entrepreneurs Mothers modified the culture of their parents to meet the evolving national economy and they participated in the shift from an agrarian to a wage economy in ways that transformed their workloads and perceptions of isolation and individualism within and between households thereby challenging traditional family based morals and obligations Their children in turn experienced evolving educational practices and achievement expectations The elders faced new situations as well as new modes of treatment Completing this valuable record of a nation in transition are the long term reassessments of the observations and conclusions of the research team and a description of Ngecha today as viewed by Kenyans who participated in the original study
