Magic for Non-Magicians Shari Lewis,1977-04-01 *Magic for Non-Magicians* Shari Lewis,Abraham B. Hurwitz,Kymberly Hunt,Behnke, Leo,1977 *Magic in Theory* Peter Lamont,Professor Richard Richard Wiseman,2005-10-28 A useful manual for any magician or curious spectator who wonders why the tricks seem so real this guide examines the psychological aspects of a magician s work Exploring the ways in which human psychology plays into the methods of conjuring rather than focusing on the individual tricks alone this explanation of the general principles of magic includes chapters on the use of misdirection sleight of hand and reconstruction provides a better understanding of this ancient art and offers a section on psychics that warns of their deceptive magic skills **Transcendental Magic: The Rise of the New Magicians** David Sinclair,2022-01-29 When the transcendental magicians appeared the traditional magicians had no idea what to make of them The newcomers said they knew the true basis of magic Magic real magic is all about the power of the mind Not the conscious mind but the unconscious mind The source of magic is the mind we know nothing about the hidden mind the secret mind the second mind the occult mind Humanity hasn t even begun to grasp the power of the unconscious But the transcendental magicians made the unconscious the transcendental unconscious the focus of their search for the powers that transform the world Transcendental magic marries psychology physics metaphysics and mathematics Magic is literally built into the fiber and fabric of existence All you need to do is work out the magic code Then you can hack reality and achieve your dreams The new magicians have come forth Transcendental magic is the most powerful magic of all The Magic Wars are about to begin [Do You Believe In Magic? \(A Wild Thing Book\)](#) Laura Krantz,2024-10-08 Inspired by her popular Wild Thing podcast journalist Laura Krantz incorporates the scientific method and her journalistic skills to determine if magic might be real in Do You Believe in Magic Magic spells and curses hexes and potions superstition and rituals We ve all heard stories of alchemists attempting to turn abundant lead into precious rare gold Or of poor unfortunate souls asking potion masters to brew up unappetizing concoctions that will help them find love And of course we re familiar with curses muttering magical words for the purposes of exacting revenge on an enemy or protecting a hidden treasure Who wouldn t like the idea of special powers or control over the natural world It seems pretty fun even if it s just the stuff of fantasy books and movies But a lot of what we call magic has grounding in real practices In fact magic is at the root of many scientific fields from chemistry to botany to astronomy and has been an important part of human culture for thousands of years Do You Believe in Magic takes readers through a world where magic and science collide What do they have in common Where do they differ What role has magic played in our history and the history of science Why is magic still significant even when it doesn t seem to line up with reality And is it possible to be scientifically minded and still believe in magic Readers are encouraged to weigh the facts and go beyond their gut assumptions to stretch their imaginations and think about why magic and science might be two sides of the same coin Includes color illustrations an at home science magic

experiment glossary bibliography and index A Wild Thing series The Search for Sasquatch Is There Anybody Out There Do You Believe in Magic Magic and Magicians in the Greco-Roman World Matthew W Dickie,Matthew W. Dickie,2003-09-02 This study is the first to assemble the evidence for the existence of sorcerors in the ancient world it also addresses the question of their identity and social origins The resulting investigation takes us to the underside of Greek and Roman society into a world of wandering holy men and women conjurors and wonder workers and into the lives of prostitutes procuresses charioteers and theatrical performers This fascinating reconstruction of the careers of witches and sorcerors allows us to see into previously inaccessible areas of Greco Roman life Compelling for both its detail and clarity and with an extraordinarily revealing breadth of evidence employed it will be an essential resource for anyone studying ancient magic **The Psychology of Magic and the Magic of Psychology** Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences

Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception Magic and Illusion in the Movies George Higham,2024-11-13

From top hats to top secrets this book is a celebration of illusion technology and mechanisms of trickery through a genre crossing selection of films Heroes villains spies con men and madmen magicians all have utilized complex constructs and trickery in thrilling cinematic adventures from the earliest days of cinema to the present Current blockbusters such as Spider Man Far from Home and the Mission Impossible series feature amazing acts of deception often appearing far fetched that are in fact surprisingly close to today s technology Along with the James Bond saga classics such as The Wizard of Oz Nightmare Alley and The Sting are joined by a host of other movies superficially seeming to be very different yet proving there is more than meets the eye A Worldbuilder's Guide to Societies Brent A. Stypczynski,2023-09-25 In fantastic worlds like Gondor Westeros Ankh Morpork Waterdeep and Hogsmeade the societies that inhabit them play important roles in capturing the feel of their settings Societies create characters and plots provide space for action and reflect history Building vibrant and interesting societies is a core element of worldbuilding in the fantasy genres This guide walks the reader through different aspects of societies to help construct fictional worlds with greater ease Examples of societies built by numerous authors in the fantasy urban modern fantasy and paranormal romance genres are interwoven to illustrate concepts Throughout this book is descriptive and suggestive rather than prescriptive and is intended to inform as well as inspire the worldbuilder
