**Biological Magnetic Resonance** Lawrence Berliner, Jacques Reuben, 2012-12-06 We are again proud to present an excellent volume of contemporary topics in NMR and EPR to the biological community The philosophy behind the volume and the presentation of each chapter remains at the high level reflected in our earlier volumes to be current pedagogical and critical The first chapters as always address a subject related to in vivo biology Gabby Elgavish addresses NMR spectroscopy of the intact heart Iain Campbell and colleagues present a state of the art description of NMR methods for probing enzyme kinetics in intact cells and tissues Klaus Mobius and Wolfgang Lubitz have produced a thorough review of the principles and applications of ENDOR spectroscopy in photobiology and biochemistry including discussions of liquid and solid state ENDOR as well as CIDEF enhanced ENDOR The final chapter by Hans Vogel and Sture Forsen addresses a contemporary problem in inorganic biochemistry namely cation binding to calcium binding proteins We are pleased to announce that a special forthcoming volume will be devoted entirely to the subject of Spin Labeling Theory and Applications 3rd compendium A substantial degree of progress has occurred in this important area of ESR in biology since the last treatise on the subject in 1979 Lastly we acknowledge our colleagues in the field who continue to support this excellent series both as subscribers and contributors We pledge to continue servicing the community as long as the need exists

**Biological Magnetic Resonance** Lawrence J. Berliner, Jacques Reuben, 2012-12-06 We are pleased to present Volume 9 of our highly successful series which now celebrates 12 years of providing the magnetic resonance community with topical authoritative chapters on new aspects of biological magnetic resonance As always we try to present a diversity of topic coverage in each volume ranging from applications of in vivo magnetic resonance to more fundamental aspects of electron spin resonance and nuclear magnetic resonance Philip Yeagle presents an eagerly awaited chapter on <sup>31</sup>P NMR studies of membranes and membrane protein interactions Alan Marshall has contributed two chapters to the volume one with Jiejun Wu describes magnetic resonance studies of 5S RNA as probes of its structure and conformation the second

**Biological Magnetic Resonance** Lawrence J. Berliner, 2012-12-06 We are pleased to present this second volume of a

series that has already received much interest. The application of magnetic resonance methods to the study of actual biological systems as contrasted to cell free samples although not entirely novel as demonstrated by Civan and Shporer in Volume I has taken on new dimensions with the use of phosphorus 31 and carbon 13 NMR in studying cells tissues and organelles. The applications of 31 P NMR to such systems is reviewed in this volume while carbon 13 will be covered in a later one. The use of nitroxide spin labels has grown to the point where it now may be considered a common biological technique. The synthesis and applications of a new class of nitroxides is described in this volume. ESR spectroscopy of paramagnetic ions is a powerful approach to studying molecular and structural details as the chapter by Boas Pilbrow and Smith on the ESR of copper in Volume 1 has shown. In this volume the ESR of molybdenum and iron is treated in a comparable fashion. In the first volume some aspects of 1 H NMR spectroscopy of certain classes of In this volume the high resolu biological macromolecules were discussed tion multinuclear NMR spectra of peptides including the physiologically significant peptide hormones are reviewed. Magnetic Resonance in Biology and Medicine Girjesh Govil, Chunni Lal Khetrpal, Anil Saran, 1985. Nmr and Living Systems David G. Gadian, 1983. Biological Magnetic Resonance Lawrence Berliner, 2012-12-06. We have now reached our sixth volume in a series which has somewhat unintentionally become an annual event. While we still intend to produce a volume only if a suitable number of excellent chapters in the forefront of biological magnetic resonance are available our philosophy is to present a pedagogical yet critical description and review of selected topics in mag netic resonance of current interest to the community of biomedical scien tists. This volume fulfills our goals well. As always we open the volume with a chapter which directly addresses an in vivo biological problem. Phil Bolton s presentation of new techniques in measuring 31 P NMR in cells. Lenkinski s chapter on the theory and applications of lanthanides in protein studies covers the details highlights and pitfalls of analysis of these com plexes in biochemical NMR. Reed and Markham summarize the interpreta tion of EPR spectra of manganese in terms of structure and function of proteins and enzymes. Dalton and colleagues describe the applications to biological problems of the relatively new capability of time domain ESR. Finally we are pleased to offer a departure from mainstream magnetic resonance with the comprehensive and stimulating chapter by Gus Maki on the theory instrumentation and applications of optically detected magnetic resonance.

**Nuclear Magnetic Resonance of Biological Macromolecules, Part B**, 2001-07-12. This volume and its companion Volume 338 supplement Volumes 176 177 239 and 261. Chapters are written with a hands on perspective. That is practical applications with critical evaluations of methodologies and experimental considerations needed to design execute and interpret NMR experiments pertinent to biological molecules. **NMR in Biological Systems** K.V.R. Chary, Girjesh Govil, 2008-04-01. During teaching NMR to students and researchers we felt the need for a text book which can cover modern trends in the application of NMR to biological systems. This book caters to the needs of i graduate students who mostly learn such techniques from senior post docs in the laboratory ii those who are not experts in NMR but wish to understand if a

particular problem in animal plant medical and pharmaceutical sciences can be answered by NMR and iii those who are experts in chemistry and biochemistry and wish to know how NMR can provide them information on structural or functional aspect of proteins nucleic acids cells and tissues human and plant organs and other biological materials This book builds a means of knowledge transfer between the beginners and the experts in NMR as applied to all aspects of life sciences

**Biological Magnetic Resonance** Lawrence Berliner, 1978-11-01 Biological magnetic resonance NMR and EPR is a rapidly expanding area of research with much activity in most universities and research institutions International conferences are held biennially with an increasing number of participants With the introduction of sophisticated and continuously improving instrumentation biological magnetic resonance is approaching the state of a common physical method in biochemical biomedical and biological research The lack of monographs on the subject had been conspicuous for a long time This gap started to close only recently However because of the rapid expansion and intensive research many texts are dated by the time of their appearance Therefore we have undertaken the editing of a series that is intended to provide the practicing chemist biochemist or biologist with the advances and progress in selected contemporary topics In seeking to make the series as authoritative as possible we have invited authors who have not only made significant contributions but who are also currently active in their fields We hope that their expertise as well as their first hand experience as reflected in the chapters of this volume will be of benefit to the reader inter alia in planning his own experiments and in critically evaluating the current literature

**Advances in Biological and Medical Physics** John H. Lawrence, Cornelius A. Tobias, 2013-10-22 Advances in Biological and Medical Physics Volume V provides an overview of the state of knowledge in biological and medical physics The book opens with a discussion of electron spin resonance and nuclear magnetic resonance and their applications to biology This is followed by separate chapters on action spectroscopy the genetics of somatic mammalian cells partial cell irradiation electrical properties of tissue and cell suspensions quantum effects in human vision and television techniques in biology and medicine Subsequent chapters deal with studies on the use of antibodies as carriers of radioactivity for therapy studies on the fundamentals of cholesterol metabolism performed with cholesterol labeled with tritium examples of low level counting problems which have been successfully solved and the radioactivity of the human body

**Biological Magnetic Resonance** Lawrence Berliner, Pierre-Marie Robitaille, 1999-01-31 This volume constitutes a compilation of the latest experiments and theories on a rapidly evolving and maturing field in MRI MRS which is the use of the stable isotope  $^{13}\text{C}$  The  $^{13}\text{C}$  is used to probe the chemistry mechanism and function in living systems All the chapters are written by experts in the field who discuss topics such as Tracer Theory and the Suitability of  $^{13}\text{C}$  NMR Applications of  $^{13}\text{C}$  to Studies of Human Brain Metabolism etc

**Physics in Biology and Medicine** Paul Davidovits, 2012-12-31 Physics in Biology and Medicine Fourth Edition covers topics in physics as they apply to the life sciences specifically medicine physiology nursing and other applied health fields This is a concise introductory paperback

that provides practical techniques for applying knowledge of physics to the study of living systems and presents material in a straightforward manner requiring very little background in physics or biology Applicable courses are Biophysics and Applied Physics This new edition discusses biological systems that can be analyzed quantitatively and how advances in the life sciences have been aided by the knowledge of physical or engineering analysis techniques The volume is organized into 18 chapters encompassing thermodynamics electricity optics sound solid mechanics fluid mechanics and atomic and nuclear physics Each chapter provides a brief review of the background physics before focusing on the applications of physics to biology and medicine Topics range from the role of diffusion in the functioning of cells to the effect of surface tension on the growth of plants in soil and the conduction of impulses along the nervous system Each section contains problems that explore and expand some of the concepts The text includes many figures examples and illustrative problems and appendices which provide convenient access to the most important concepts of mechanics electricity and optics in the body Physics in Biology and Medicine will be a valuable resource for students and professors of physics biology and medicine as well as for applied health workers Provides practical techniques for applying knowledge of physics to the study of living systems Presents material in a straight forward manner requiring very little background in physics or biology Includes many figures examples and illustrative problems and appendices which provide convenient access to the most important concepts of mechanics electricity and optics in the body
