Introduction

It is important to note that Jo Boaler is a writer and educator who has received many prizes and awards. At the same time, the woman leads a movement that aims to change the way teachers and students think about mathematics and perceive it. Thus, during her speech at TEDx, she talked about the experiment she conducted at Stanford. Moreover, the speaker immediately announced that her students cried in order to interest people to listen and capture their attention. Hence, the experiment was performed with students who spent a lot of time studying algebra and really tried to improve their knowledge. However, the innovation was that Jo Boaler did not use standard tests to check their knowledge, but showed them a virtual picture with squares and assigned tasks.

Discussion

Interestingly, the students' opinions were different, they believed that the squares grow horizontally, vertically, or proportionally. However, the speaker notes that two people in the group cried because they realized that the simple principle that explains the algebraic progression. Moreover, the tears were caused by the fact that these people spent many hours studying higher mathematics using standard methods, but most of them could not explain the arrangement of squares in the picture.

Then, the woman began to share her experience of studying at school, where children constantly learn new symbols and formulas, which makes them tired and afraid. Therefore, most of the students do not have enough knowledge of mathematics, because they consider this subject extremely difficult and boring. Instead, as a solution to this problem, Jo Boaler proposes to apply knowledge about the brain to make it easier to learn mathematics. Therefore, the speaker demonstrates a picture of the human brain and shows that two of the five brain pathways are visual. Thus, she showed that the brain can more easily perceive information that is difficult for it, which is
