Sir George Head

Rare Flesh:

Rare Flesh David E. Armstrong, Clive Barker, 2003 In the dark recesses of the human imagination lies an erotic potential that is rarely explored Rare Flesh dares to venture into this taboo territory pairing Armstrong's stunning male nudes with provocative poetry and prose by Clive Barker Fans of Barker's best selling novels and films from Weaveworld to Hellraiser are already familiar with his unique brand of eroticism and they will be eager to see it brought to life visually for the first time here Distinguished from other male nude photography books Rare Flesh presents a series of photo essays that each explores a different fantasy scenario that could have sprung from a Barker novel Dozens of models of varying body types and backgrounds were chosen and each was encouraged to act out his own personal dreamscape working with the photographer The images fashioned with the latest digital technology often play with the viewer's perceptions as many of the models are covered entirely in black body paint or shot against solid color backgrounds The results transform the body and tease the viewer showing us the male form as we've never seen it before This dynamic work is an intensely collaborative effort between Armstrong and Barker who are life partners as the text delves into themes of love betrayal loneliness and redemption

Plant and Human Health, Volume 1 Munir Ozturk,Khalid Rehman Hakeem,2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1 4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from natural products is not without its problems Frequent challenges encountered include the procurement of raw materials the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor Volume 1 highlights how humans from specific areas or cultures use indigenous plants Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically it focuess on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture
