Ras Oncogenes:

ras Oncogenes D. Spandidos, 2013-06-29 Proceedings of the workshop held Nov 1988 Ras genes constitute an important family among the fifty oncogenes which have been discovered so far and they contribute significantly to the human tumor burden since around 70% of human tumors have an increased level of ras gene product and 40% carry a mutation. **Oncogenes** Geoffrey M. Cooper, 1995 The second edition of this authoritative text details major advances and developments in the field such as the identification of many new tumor suppressor genes and the striking progress in understanding signal transduction pathways leading to cell proliferation. **Oncogenes** Second Edition addresses the needs of advanced undergraduates, graduate students, medical students, physicians, and scientists by examining the current state of oncogene study and where future research may lead. **Oncogenes and Cancer** Stuart A. Aaronson, 1987-12 Discoveries that a small subset of cellular genes, proto-oncogenes, are frequent targets of carcinogenic insults or chance that convert them to oncogenes have opened new areas of approach to understanding and eventually controlling the events leading to cancer. New technology has made it possible not only to identify genes involved in the etiology of cancer but to dissect their molecular composition. This symposium brought together scientists from areas of carcinogenesis and molecular biology to review the state of the art in this field. The papers presented in this proceedings volume can be grouped into four broad areas: the mechanisms of oncogene activation and associations of oncogenes with tumors; the mechanisms of oncogene action; the physiology of proto-oncogenes; and the discovery and characterization of new oncogenes. **Oncogenes and Tumor Suppressor Genes in Human Malignancies** Christopher Benz, E.T. Liu, 2012-12-06 The first edition of *Oncogenes* 1989 focused on several of the better known transforming mechanisms and surveyed a spectrum of solid tumors and hematologic malignancies. Several of the nearly 50 known oncogenes most relevant to human disease were examined. In contrast, this volume presents a very different profile and balance of subject material that reflects the rapidly changing field of molecular oncology and its newly emerging concepts. Among the most important discoveries of the past 4 years are the identification of nearly a dozen different tumor suppressor genes and the finding of an entirely new class of cancer-causing gene, bcl-2, that acts by inhibiting cell death rather than stimulating cell proliferation. This edition begins by reviewing selected malignancies in which our earlier search for clinically relevant oncogenes has led to more focused studies on gain of function and loss of function genetic abnormalities as well as autocrine and paracrine growth factor loops known to regulate tumor physiology and malignant cell behavior. Curiously, many of these genetic and functional abnormalities are shared by several different tumor types and are not uniformly present in all tumors of the same type. This observation brings up molecular questions about the tissue-specific determinants that underlie individual cancers and also gives added impetus to the suggestion that molecular abnormalities referred to as tumor markers be included among the histopathologic features used for clinical diagnosis and management. *Oncogenes* Kathy B. Burck, Edison T. Liu, James W. Larrick, 2012-12-06 Cancer viruses have

played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelist Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his plat form having been the chemical characterization of the tobacco mosaic virus as a pure protein correction ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses It was problematic whether viruses played an etiological role in more than a handful of human cancers

Oncogenes C.C. Benz,E.T. Liu,2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer geni tourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Hormones Growth Factors & Oncogenes Enrique Pimentel,1987-06-30 This text examines the hormones and peptide growth factors involved in the regulation of metabolism growth and differentiation in metazoan organisms and proto oncogene expression Investigates protein products of some proto oncogenes for involvement in the transductional and post transductional and mechanisms of hormones and peptide growth factors

Oncogenes and Retroviruses Peter K. Vogt,2012-12-06 The newest volume in the Current Topics in Microbiology and Immunology series edited by Dr Vogt and dealing with oncogenes and retroviruses contains four review articles by international authorities in the field These articles presenting the latest research results continue the tradition of excellence for which the series is so well known

Elements of Human Cancer Geoffrey M. Cooper,1992 This best selling volume provides a broad overview of cancer from the basic biology and causes of human cancer through detailed discussion of the major types of cancer A concluding chapter summarizes progress and discusses

current and future directions in cancer research and treatment *The Superfamily of ras-Related Genes* Demetrios A. Spandidos, 2013-03-08 since the earliest results on the linkage between ras activation and cell transformation appeared a vast amount of additional information has been generated which emphasizes the importance of ras related genes in membrane trafficking cell proliferation differentiation and cancer These advances led to the development of new strategies for the diagnosis prognosis and prevention of cancer Ras related genes appear to be central to the mechanism of transformation by other oncogenes and therefore constitute a focal point upon which attempts to intervene in the process of carcinogenesis will be concentrated The present volume contains the contributions to the NATO Advanced Research Workshop on the The Superfamily of ras Related Genes held in Agia Pelagia Heraklion Crete Greece May 1991 At this meeting the leading researchers in this field came together to discuss the most recent progress in analysis of biological function of the ras related genes As an organizer I feel that the Workshop was a success and would like to thank all the participants and the contributors to this volume I thank the NATO Scientific Affairs Division Brussels the Greek Ministry of Industry Energy and Technology the International Center for Cancer Research the National Hellenic Research Foundation and the Medical School University of Crete for sponsoring the Meeting Oncogene and Transgenics Correlates of Cancer Risk Assessments Constantine Zervos, 2012-12-06 The data the information and even the overarching knowledge necessary for risk assessments of economically important environmental carcinogens come for the most part from the applied biological disciplines e g toxicology epidemiology biostatistics etc The more fundamental biological disciplines e g biochemistry cell biology molecular biology molecular genetics of cancer etc have enormous but unrealized potential to improve current cancer risk assessment methods The objective of this advanced research workshop ARW was to advance the state of the art of cancer risk assessment methods by identifying potential short and long term contributions to such methods from the more fundamental disciplines Attention was paid to short and long term contributions from research advances in the biochemistry and physiology of oncogenes oncogenes research and in the construction and utilization of transgenic animals transgenics research In the last 20 years researchers in the fundamental biological disciplines i e biochemists geneticists molecular and cell biologists etc have inter alia advanced spectacularly our understanding of the nature of neoplastic diseases Their phenomenal progress is the combined result of both advances and refinements of the techniques available to them and of new fundamental discoveries Among the latter the most significant are the discoveries of oncogenes and of the feasibility of creating transgenic animals i e of transferring well defined and expressible genes from the cells of one species of organisms to the embryonic cells of another Environmental Health Perspectives , 1993 **The Pathobiology of Neoplasia** A.E. Sirica, 2012-12-06 This book is directed primarily to advanced graduate and medical students postdoctoral trainees and established investigators having basic research interests in neoplasia Its content is based in part on the lecture outlines and selected histopathology laboratory components of an advanced course entitled The Pathobiology of Experimental Animal and

Human Neoplasia developed by me for the Experimental Pathology Curriculum of the Department of Pathology at the Medical College of Virginia In this regard an effort has been made to integrate pathology with carcinogenesis genetics biochemistry and cellular and molecular biology in order to present a comprehensive and current view of the neoplastic process For focus emphasis is mainly being placed on the neoplastic cells themselves and not on associated host mediated responses It is hoped that this book will accomplish its purpose of providing students and researchers who already possess strong but diverse basic science backgrounds with unifying concepts in tumor pathobiology so as to stimulate new research aimed at furthering our understanding of neoplastic disease I wish to express my appreciation and heartfelt thanks to the authors whose individual ranges of expertise and research experience clearly bring to their respective chapters unique perspectives that easily transcend any redundancy that may be present In addition I am grateful to Drs George Vennart Saul Kay and Fred Meier and to Ms Connie Wilkerson of the Department of Pathology at MCV for their helpful comments and their review of some of the material

Epidemiology and Quantitation of Environmental Risk in Humans from Radiation and Other Agents A. Castellani, 2013-04-17 The identification and quantitation of environmental risk in humans is one of the main problems to be solved in order to improve the protection of individuals and of human populations against physical and chemical pollutants Epidemiology plays a central role in the evaluation of health risk directly in human populations In this volume are collected 33 lectures presented at the AS course on Epidemiology and quantitation of environmental risk in humans from radiation and other agents potential and limitations sponsored by NATO and Italian Association of Radiobiology and organized by ENEA The course has been devoted to a number of aspects of environmental risk analysis and evaluation based on epidemiological investigation Basic epidemiological concepts and methods have been reviewed Fundamentals of dosimetry and microdosimetry were presented in relation to the contribution of epidemiology in defining the dose effect relationships for radiation carcinogenesis and its relation with age sex and ethnicity The mechanisms of carcinogenesis as a multi stage process were illustrated One of the main topics was cancer epidemiology and its correlation with occupational and non occupational exposure to radiation diagnostic and therapeutic irradiation cancer proneness hereditary and familial diseases abnormal response to carcinogens environmental pollution in air and water exposure to radon in mines and in building material atomic bomb explosion chemotherapy dioxin and related compounds

Cellular and Molecular Biology of Mammary Cancer E. Anderson, G. Heppner, W. Kidwell, Daniel Medina, 2012-12-06 The idea for this book arose during the 1985 Gordon Conference on Mammary Gland Biology New developments in the methodology of cell biology and the explosive growth of molecular biology had begun to impact upon our understanding of mammary gland growth and function It seemed a propitious time for summarizing the current status of knowledge of the cell and molecular biology of mammary cancer and for attempting to outline future areas of concern and interest The reviews presented here were completed by the Fall of 1986 Although new insights will surely continue to emerge it is hoped that the material in this volume will form not only a current

update but a basic core of information for future experiments We have not attempted to cover all areas of mammary gland transformation Those areas where recent detailed reviews are already available have been omitted Also the areas of normal gland development cell ultrastructure hormone responsiveness chemotherapy and clinical aspects of mammary cancer have not been included Instead we have selected those areas where the development of new methodology reagents and results have led to new ideas about mammary gland function and development as they are related to neoplasia

Retroviruses and Disease Hidesaburo Hanafusa, 2012-12-02 Retroviruses and Disease presents a relevant summary of the state of knowledge in both human nonhuman retroviruses It highlights significant concepts regarding their commonalities and differences in terms of retroviral systems A section of this book covers the pathogenic human retroviruses and focuses on two These are HTLV 1 the first human retrovirus that was isolated and HIV the cause of a potent immunological disorder The life cycle of replication competent retroviruses including the murine leukemia viruses and its functions is discussed in Chapters 1 and 2 The focus of the third chapter is the transformation of Rous sarcoma virus Meanwhile Chapter 4 discusses the multiple stages in avian leukosis virus induced B cell lymphoma Oncogenes the molecular basis of human cancer are also covered in this book Another virus also discussed in this book is the human T cell leukemia virus The book is a good reference for students teachers specialists scientists and researchers in microbiology

Oncogene Proteins Artur H. Malloy, 2008 Oncogene proteins are proteins coded by oncogenes They include proteins resulting from the fusion of an oncogene and another gene oncogene proteins fusion An oncogene is a modified gene or a set of nucleotides that codes for a protein and is believed to cause cancer This book brings together the latest research in this field from around the world

Molecular Carcinogenesis and the Molecular Biology of Human Cancer David Warshawsky, Joseph R. Landolph Jr., 2005-10-31 To gain a complete overview of what is presently known about molecular carcinogenesis would prove to be a very daunting task for those not already steeped in this complex subject Providing an in depth summary of the molecular aspects of carcinogenesis this text comprehensively covers chemical radiation and viral carcinogenesis from animal and human test data to metabolism and DNA binding It covers organic and metal carcinogenesis related to lung breast prostate skin liver colon brain and thyroid cancers The book explores the human implications of data regarding oncogenesis of transgenic and knockout mice and rats It also covers the genomics and proteomics of chemoprevention risk and exposure assessments and regulation of carcinogens

Molecular Carcinogenesis and the Molecular Biology of Human Cancer is an ideal text for graduate courses in cancer

The Search for New Anticancer Drugs Michael Waring, B.A. Ponder, 1992-11-30 Most of the anti cancer drugs in use today were discovered by happy accident rather than design yet the rational design of better anti cancer drugs remains a cherished goal and one of the most important challenges facing medical science This book represents a compilation of views and progress reports which illustrate the diversity of approaches to the problem Recent research has confirmed the belief that critical genetic changes are at work in cancer cells The genome then DNA in biochemical terms surely represents a critical target for

specific chemotherapy of cancer and several chapters address the issue of attacking DNA gene targetting and the like Others deal with principles of rational design exploitation of novel modalities and targets or the nuts and bolts of antitumour drug testing While no attempt has been made to provide a comprehensive coverage of this wide ranging and vitally important subject the present volume in the series will provide much food for thought **Journal of the National Cancer Institute**,1990
