Ratings Analysis:

The Rating Agencies and Their Credit Ratings Herwig Langohr, Patricia Langohr, 2010-04-01 Credit rating agencies play a critical role in capital markets guiding the asset allocation of institutional investors as private capital moves freely around the world in search of the best trade off between risk and return However they have also been strongly criticised for failing to spot the Asian crisis in the early 1990s the Enron WorldCom and Parmalat collapses in the early 2000s and finally for their ratings of subprime related structured finance instruments and their role in the current financial crisis This book is a guide to ratings the ratings industry and the mechanics and economics of obtaining a rating It sheds light on the role that the agencies play in the international financial markets It avoids the sensationalist approach often associated with studies of rating scandals and the financial crisis and instead provides an objective and critical analysis of the business of ratings The book will be of practical use to any individual who has to deal with ratings and the ratings industry in their day to day job

Reviews Rating agencies fulfil an important role in the capital markets but given their power they are frequently the object of criticism Some of it is justified but most of it portrays a lack of understanding of their business In their book *The Rating Agencies and their Credit Ratings* Herwig and Patricia Langohr provide an excellent economic background to the role of rating agencies and also a thorough understanding of their business and the problems they face I recommend this book to all those who have an interest in this somewhat arcane but extremely important area Robin Monro Davies Former CEO Fitch Ratings At a time of unprecedented public and political scrutiny of the effectiveness and indeed the basic business model of the Credit Rating industry and heightened concerns regarding the transparency and accountability of the leading agencies this book provides a commendably comprehensive overview and should provide invaluable assistance in the ongoing debate Rupert Atkinson Managing Director Head of Credit Advisory Group Morgan Stanley and member of the SIFMA Rating Agency Task Force The Langohrs have provided useful information in a field where one frequently finds only opinions or misconceptions They supply a firm base from which to understand changes now underway A well read copy of this monograph should be close to the desk of every investor issuer and financial regulator legislator or commentator John Grout Policy and Technical Director The Association of Corporate Treasurers

Performance Management T. V. Rao, Nandini Chawla, 2024-03-14 This book attempts to shift focus from performance appraisals to performance management incorporating performance planning analysis and development as critical components of it The performance management system PMS is a future driven exercise rather than merely a past reviewing exercise Performance management is treated as a year round practice and not an appraisal process conducted once a quarter or annually Moreover it is now considered to be everyone's responsibility and not merely that of HR or the upper management This book advocates the structuring of PMSs and their implementation It incorporates the most modern 360 degree feedback systems and shows the ways and means of integrating it into PMS Arguments are offered to use rating less appraisals and or a combination of appraisals with 360

degree feedback It defines performance management to mean continuous improvements in performance of individuals their teams departments and corporations It also outlines that planning analysis review coaching and capability building are essential building blocks for good performance management Concise lucid and engaging this volume would be useful to the students researchers and faculty of human resource management organizational behaviour and applied psychology It would also be an invaluable guidebook for practicing business executives and HR professionals to help them implement the performance management system for effective talent management leading to increased productivity Rating Politics Zsófia Barta, Alison Johnston, 2023 This book explores how countries political and policy choices affect the credit ratings that they receive The authors use statistical analysis of ratings interviews with sovereign rating analysts and a close reading of official communications of rating agencies to show that ratings penalize center left governments and policies **Rating the rating agencies** United States. Visual Perception of Emotional and Conversational Facial Expressions Kathrin Kaulard,2015-05-11 One of the defining attributes of the human species is sophisticated communication for which facial expressions are crucial Traditional research has so far mainly investigated a minority of 6 basic emotional expressions displayed as pictures Despite the important insights of this approach its ecological validity is limited facial movements express more than emotions and facial expressions are more than just pictures The objective of the present thesis is therefore to improve the understanding of facial expression recognition by investigating the internal representations of a large range of facial expressions displayed both as static pictures and as dynamic videos To this end it was necessary to develop and validate a new facial expression database which includes 20 000 stimuli of 55 expressions study 1 Perceptual representations of the six basic emotional expressions were found previously to rely on evaluation of valence and arousal study 2 showed that this evaluation generalises to many more expressions particularly when displayed as videos While it is widely accepted that knowledge influences perception how these are linked is largely unknown study 3 investigated this question by asking how knowledge about facial expressions instantiated as conceptual representations relates to perceptual representations of these expressions A strong link was found which changed with the kind of expressions and the type of display In probably the most extensive behavioural studies with regards to the number of facial expressions used to date this thesis suggests that there are commonalities but also differences in processing of emotional and of other types of facial expressions Thus to understand facial expression processing one needs to consider more than the 6 basic emotional expressions These findings outline first steps towards a new domain in facial expression research which has implications for a number of research and application fields where facial expressions play a role ranging from social developmental and clinical psychology to computer vision and affective computing
