Sharks: Conservation, Governance and Management Erika J. Techera, Natalie Klein, 2014-06-05 The key aim of this book is to explore the global conservation and management of sharks There has been a rapid decline in populations of many shark species while new science has emerged of the critical role they play in marine ecosystems However the authors show that conservation law and policy have been slow to develop with only a small number of iconic species being protected worldwide The increase in fishing impact primarily through shark finning and by catch has led to shark conservation receiving greater international attention in recent years The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management Recent trends are analysed including shark finning bans that have been put in place in several countries the widening number of nations establishing shark sanctuaries and the growth of shark based tourism The efficacy of current listing processes for endangered species and fisheries regulations is also examined Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed Contributors include leading authorities from

universities and conservation organizations in North America Europe and Australia A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter disciplinary research and management approaches that are necessary to address the decline in sharks *DKfindout! Sharks: A History of Fear in Australia Callum Denness, 2019-09-24 For as long as people have lived in Australia, the shark has loomed large in our fears. From the Noongar people of Western Australia, who stayed out of the water for fear of being taken, to media hysteria about attacks and even sightings today, sharks occupy the dark recesses of our national psyche, unlike any other predator. They challenge the very sense of ourselves as Australians, a people who hug the coastline and love the freedom of the surf. And the dispute between whether to kill or protect sharks cuts to the political core of our nation, yet another divide between the right and the left. There is no denying that shark attacks have been increasing in recent years, and so have our fears. Where do we go from here? How worried should we be? Journalist Callum Denness deep-dives into the history of our relationship with sharks and circles our fear by talking to activists, marine biologists, politicians, surfers, survivors, and those who've lost loved ones. Compelling and challenging, this is the clearest picture yet of whether or not we can co-exist with sharks. Don't get back into the water until you read *Sharks: A History of Fear in Australia*.
