The Primary Way Chung-ying Cheng, 2020-09-01 In *The Primary Way* the distinguished scholar of Chinese philosophy Chung ying Cheng synthesizes his lifetime of work on the Yijing also known as the I Ching or Book of Changes Cheng offers a systematic engagement with the classic Chinese text as a philosophy that is still valuable and relevant today In contemporary philosophical terms Cheng has developed the ontological hermeneutics of the Yijing as well as its philosophical methodology of symbolic reference in a holistic and onto generative system of trigrams and hexagrams The book is organized around eight themes that illuminate Cheng s interpretation of the Yijing as a philosophy for creative human action and transformation He demonstrates how the philosophy of change in the Yijing embodies early Chinese ontology cosmology epistemology and virtue ethics in the interpretation of divinatory judgments Cheng s work shows how the philosophy of change contains a vision of humanity as creatively related to heaven and earth and how it gives positive meaning to any change as part of a ceaseless creativity With this understanding it enables humanity to develop its potential as a partner of heaven and earth

A Concordance to the Poems of Robert Browning , *A Commentary Upon Browning's The Ring and the Book* Arthur Kemball Cook, 1920 **Symons's Meteorological Magazine** , 1911 Intelligent Design using Solar-Climatic Vision Samimi, Mojtaba, Nasrollahi, Farshad, 2014-07-22 Thanks to the availability of energy materials and technologies the level of comfort in buildings is increasing around the world However today we are also facing buildings and cities that are responsible for a high percentage of global energy consumption Pollution heat island effect climate change and global warming are just a few of the challenges that the human race as well as other living matter on earth will have to deal with in future Moreover as time goes by we may not necessarily live in healthier conditions with better life styles Within a limited period this global and complex situation will need thorough integrated and local surgery This book is designed to draw greater attention to the sun and how a solar climatic vision can influence and improve architectural design and urban planning It may not have been discovered yet how small our planet is and how big the effect of a simple decision can be but it is nevertheless important to be reminded of the sun not only as a powerful and perpetual actor in our dynamic atmosphere but also as a basis for figuring out a variety of adaptive solutions that must be identified and followed In addition to the changes made by architects clients and builders as well as planners municipalities and all other persons who make decisions on plans the role of those who live inside buildings and cities not as users but as producers and maintainers also bear a certain degree of responsibility Therefore the optimization of new constructions the modification of existing buildings and urban fabric should be considered on a global scale in regard to the sun as well as our future needs The aim should be to improve energy efficiency health comfort and safety in all living spaces whether indoors or outdoors In this respect the analysis of the current situation forecasting future scenarios and the development of intelligent alternatives are fundamental steps In terms of energy efficiency daylight provision and internal comfort the use of advanced building materials and

technologies as well as simulation tools can improve the building envelope and its performance. However, it is important to understand when, where, and how they should best be applied to achieve an intelligent form as well as a responsive layout with a high level of performance for other essential aspects too, e.g., structure, view, operation. Although today many consider solar architecture the attaching of solar thermal collectors and PVs to building roofs and facades, this is only one of the complex tasks which should be integrated in the design. In fact, solar architecture incorporates all the complexities of architecture on different scales. Besides, it has to respond accurately to certain issues resulting from the currently low price of other energy sources in many locations. In addition to the reduction of payments, other valuable improvements associated with solar climatic considerations in the design should be clarified and compared. During the design process, an optimization, i.e., re-arrangement, re-orientation, re-sizing of different elements, namely solar surfaces, i.e., transparent, opaque surfaces, shading, reflecting devices, collectors, building volumes, and trees, does not necessarily increase the construction costs but can help identify deficient or over-designed elements. Alongside improving the energy efficiency aspects of individual buildings, a solar climatic vision in planning can lead to other qualities for the benefit of small and large scale living spaces, whether indoors or outdoors. Around the world, we must be prepared for more shocking news and annual records if many continue to build buildings, whether cheap or expensive, with little attention to the sun. In neighborhoods on an urban scale, the insufficient analysis and inaccurate decisions regarding building volumes and orientation can affect the potentials and performance of both internal and external spaces in terms of energy production, energy demand, daylight, health, comfort, and safety for long periods of time. This book includes a decade of SOLARCHVISION practices on how architectural design and urban planning can be adapted by the constant path and variable effects of the sun in each location. Sharing such a vision can help architects, urban planners, and clients to make more accurate decisions concerning energy and climate-related matters. After presenting fundamental diagrams in different cities around the world, e.g., the sun paths, solar radiation, and temperature models, the role of an intelligent design for the building skin is described and analyzed in terms of finding a good relation between outside and inside, as well as the direct and indirect collection of solar energy on different building surfaces. This research can bring about new appearances and structures for the creation of smart buildings and responsive cities. Aufgrund der Verfügbarkeit von Energie, Materialien und Technologien erhöht sich der Wohnkomfort in Gebäuden weltweit. Jedoch stehen wir auch vor dem Problem, dass Gebäude und Städte für einen hohen Anteil des weltweiten Energieverbrauchs verantwortlich sind. Umweltverschmutzung, Wärmeinseleffekte, Klimawandel und globale Erwärmung sind nur einige der vielen Herausforderungen, mit denen die menschliche Rasse ebenso sowie alles weitere Leben auf der Erde in Zukunft umgehen muss. In absehbarer Zeit wird diese komplexe globale Situation grundlegende ganzheitliche und rechtliche Eingriffe erfordern. Dieses Buch richtet die Aufmerksamkeit auf die Sonne und dadurch auch darauf, wie ein solarklimatisches Konzept die Architektur und Stadtplanung beeinflussen und verbessern kann. Es ist vielleicht noch nicht entdeckt worden, wie klein unser

Planet doch eigentlich ist und wie groß der Einfluss einer einfachen Entscheidung sein kann aber vor allem ist es wichtig dass die Sonne eine wichtige und immer wachsende Rolle in unserer dynamischen Atmosphäre spielt und dies als Grundlage bei der Suche von Lösungsmöglichkeiten erkannt und angewandt wird Neben Architekten Kunden und Bauherren sowie Planern Kommunen und allen anderen Personen die Entscheidungen über die Planung treffen spielen die in den Gebäuden und Städten Lebenden auch eine Rolle nicht als Nutzer sondern als Erzeuger und Betreuer und auch sie haben eine gewisse Verantwortung Daher sollten alle Optimierungen neuer Bauten Modifikationen von Bestandsgebäuden und Stadtstrukturen auf globaler Ebene Bezug auf die Sonne und auf zukünftige Bedürfnisse nehmen Das Ziel sollte es sein die Energieeffizienz Gesundheit Komfort und Sicherheit in allen Lebensräumen ob drinnen oder draußen zu verbessern In dieser Hinsicht sind die Analyse der aktuellen Situation die Prognose zukünftiger Szenarien und die Entwicklung intelligenter Alternativen grundlegende Schritte Der Einsatz von modernen Baustoffen und Technologien sowie Simulationswerkzeugen kann die Energieeffizienz und Leistungsfähigkeit eines Gebäudes verbessern Es ist jedoch wichtig zu verstehen wann wo und wie sie am besten in der architektonischen Gestaltung angewendet werden können um ein ansprechendes Layout mit einer hohen Leistung für eine Vielzahl von architektonischen Aspekten zu erreichen und in Bezug auf Energieeffizienz Tageslichtversorgung und internen Komfort ein optimales Ergebnis zu erzielen Obwohl heute viele schon das Anbringen von Solar Kollektoren und PV Modulen auf Gebäuden und Fassaden als Solararchitektur betrachten ist dies nur eine der komplexen Aufgaben in diesem Feld der Architektur Tatsächlich beinhaltet die Solararchitektur die gesamte Komplexität der Architektur auf unterschiedlichen Ebenen Außerdem hat sie sehr genau auf bestimmte Sachverhalte zu reagieren welche aus den vielerorts aktuell geringen Energiekosten anderer Energiequellen resultieren Neben der Reduzierung von Baukosten sollten andere wertvolle Verbesserungen resultierend aus solar klimatischen Überlegungen im Entwurf hervorgehoben und verglichen werden In der Tat kann eine Optimierung verschiedener Elemente während des Design Prozesses wie z B Solarflächen Baukörpern und Räumen nicht notwendigerweise die Baukosten steigern jedoch dabei helfen unnötige oder überdimensionierte Elemente zu identifizieren Neben der Verbesserung der Energieeffizienz Aspekte einzelner Gebäude kann eine zuverlässige integrierte solarklimatische Planung zu weiteren Qualitäten der Lebensräume führen überall auf der Welt müssen wir uns auf mehr und mehr schockierende Nachrichten und jährliche Rekordwerte vorbereiten wenn weiterhin viele Gebäude mit wenig Aufmerksamkeit auf die Sonne gebaut werden In Stadtteilen auf urbaner Stadtebene kann die unzureichende Analyse und unklare Entscheidungen über Baukörper und Orientierung die Potenziale und Leistung interner und externer Räume im Bezug auf Energieproduktion Energiebedarf Tageslicht Gesundheit Komfort und Sicherheit auf lange Zeit beeinflussen Dieses Buch enthält ein Jahrzehnt SOLARCHVISION Praktiken darüber wie die Architektur und Stadtplanung mit dem konstanten Weg und den variablen Auswirkungen der Sonne an jedem Standort angepasst werden kann Das Teilen dieser Vision kann Architekten Stadtplanern und Kunden helfen zielgenauere Entscheidungen über energie und

Confronting the Sacred: Durkheim vindicated through philosophical analysis, ethnography, archaeology, long-range linguistics, and comparative mythology Wim van Binsbergen, 2018-05-06
With Elementary Forms of Religious Life 1912 the sociologist
mile Durkheim formulated the most influential social science theory of religion to date
Pivotal are the paired concepts sacred
profane the notion of collective representations and the hypothesis that through such religious symbols society compels its
members to venerate herself i e to submit to the social as an irreducible instance in its own right
Having grappled with this Durkheimian inheritance for half a century the anthropologist of religion and intercultural philosopher Wim van Binsbergen
in this book traces his own steps in confront_ing Durkheim s sacred through theoretical criticism through ethnographic
application to popular Islam in the segmentary social organisation of the highlands of Northwestern Tunisia and by state of
the art long range methods of linguistic and comparative mythological analysis
Thus much to his surprise he demonstrates the continued validity of Durkheim s insights in religion
