Ship Motion Control Autopilots With Rudder Roll Stabilisation And Combined Rudderfin Stabilisers:

Ship Motion Control Tristan Perez, 2006-03-30 engineers into a single volume whilst concentrating on two important research control design problems autopilots with rudder roll stabilization and fin and combined rudder fin stabilization He has been guided by some of the leading marine control academics in particular Mogens Blanke and Thor Fossen indeed Chapters 3 and 4 on kinematics and kinetics of ship motion are jointly authored with Professor Fossen There are some 240 cited references an invaluable resource for interested readers The volume is likely to appeal to a wide range of readers who will each be able to extract something different from the various parts of the monograph Part I has some four chapters on the modelling fundamentals including kinematics dynamics and actuators Part II is a very useful survey of the ship roll stabilization problem and how ship roll performance is measured and assessed This clearly motivates the human necessity for roll reduction and roll stabilization Parts III and IV move on to the control systems aspects of the various stabilization designs Valuable material here includes a study of system performance limitations as caused by the presence of non minimum phase characteristics and actuator saturation Chapter 10 has an interesting historical review of these marine control problems stretching back some thirty years into the 1970s

the multivariate autoregressive model with exogenous variables ARX model and the radial bases function net type coefficients ARX model The noise contribution analysis can then be performed through the estimated autoregressive AR model and various types of autopilot systems can be designed through the state space representation of the models The marine autopilot systems addressed in this book include optimal controllers for course keeping motion rolling reduction controllers with rudder motion engine governor controllers noise adaptive autopilots route tracking controllers by direct steering and the reference course setting approach The methods presented here are exemplified with real data analysis and experiments on real ships This book is highly recommended to readers who are interested in designing optimal or adaptive controllers not only of ships but also of any other complicated systems under noisy disturbance conditions **Control**
