Narcotics Narinder Rawal,Dennis W. Coombs,2012-12-06 One of the most exciting developments in medicine in this century
 has been the discovery of opioid receptors and their pharmacology The breadth of know edge derived from such discovery
 has truly changed the practice of medicine today The acceptance by the clinicians of the research data obtained by the basic
 scientist on spinal opioids is truly amazing The clinical sequelae of the discovery of opioid receptors has been the
 development of the technique of intraspinal administration of opioids In the last decade much has been written about
 indications effects and side effects of intraspinal opioids The technique has become commonplace for cancer and
 postoperative pain However no standards of care and management of patients with spinally administered opioids have been
 developed We need these standards to be developed and universally followed The monograph was conceived to update

clinicians on the applied pharmacology of spinal opioids We were fortunate to have Drs N Rawal and D Coombs agree to edit this monograph They have been able to assemble world renowned experts as contributing authors It is our hope that the contents of this book will be stimulating informative and useful to the reader PREFACE Much has been written about the subject of spinal opioid analgesia including several notable reviews We were stimulated to assemble this particular volume in this important series on pain management initiated by Dr Raj for a number of reasons *What's New in Anesthesiology* T.H. Stanley, 2012-12-06 Theodore H Stanley M D What's New in Anesthesiology in 1988 contains the Refresher Course manuscripts of the presentations of the 33rd Annual Postgraduate Course in Anesthesiology which took place at the Marriott Hotel Convention Center in Salt Lake City Utah February 19-23 1988 The chapters reflect new data ideas and concepts within the general framework of most recent developments in evaluation and monitoring cardiac function before during and after surgery new anesthetics and their actions on the heart and peripheral vasculature and other organ systems metabolism and elimination of anesthetics and anesthetic adjuvants and recent developments in the anesthetic management of patients with congenital heart disease renal and pulmonary dysfunction and diabetes insipidus In addition there are chapters on new developments in obstetrics regional anesthesia and anesthetic management of the newborn The purposes of the textbook are to 1 act as a reference for the anesthesiologists attending the meeting and 2 serve as a vehicle to bring many of the latest concepts in anesthesiology to others within a short time of the formal presentation Each chapter is a brief but sharply focused glimpse of the interests in anesthesia expressed at the conference This book and its chapters should not be considered complete treatises on the subjects addressed but rather attempts to summarize the most salient points This textbook is the sixth in a continuing series documenting the proceedings of the Postgraduate Course in Salt Lake City
