Shock Effect 11:

External Shocks, Policies, and Tail-Shifts in Real Exchange Rates Mr. Nicolas E Magud, Nicolas Magud, Samuel Pienknagura, 2023-06-23 We use panel quantile regressions to study extreme rather than average movements in the distribution of the real effective exchange rate REER of small open economies We document that global uncertainty VIX and global financial conditions U S monetary policy shocks have a strong impact on the distribution of the REER changes with larger impacts in the tails of the distribution and especially in economies with shallower FX markets lower central bank credibility and higher credit risk i e weaker macro fundamentals Foreign exchange intervention FXI partially offsets the impact of these shocks especially in the left tail large depreciations and particularly in economies with weaker fundamentals but more importantly when FXI is used sporadically Thus our results highlight the importance of deepening FX markets improving central bank credibility and strengthening macro fundamentals against the potential dynamic trade offs of overreliance on a policy that would exacerbate the previously mentioned frictions While our results point to low effectiveness of capital flow management in preventing large REER movements they seem to enable more impactful foreign exchange intervention in the immediate aftermath of shocks

Macroeconomic and Sectoral Effects of Terms-of-Trade Shocks International Monetary Fund, 1999-10-01 This paper investigates the impact of long run terms of trade shocks Analytically we show that if capital goods are largely importable or the labor supply is sufficiently elastic then natural resource booms increase aggregate investment and worsen the current account but Dutch Disease effects are weak We then examine 18 oil exporting developing countries during 1965 89 Favorable terms of trade shocks increase investment and especially government consumption but reduce medium term savings hence the current account deteriorates Nontradable output increases in response to real appreciations but Dutch Disease effects are strikingly absent Investment consumption and nontradable output respond more to a terms of trade decline than to an increase
