Shock Waves Zonglin Jiang, 2010-05-30 The 24th International Symposium on Shock Waves ISSW24 was held at the Beijing Friendship Hotel during July 11-16, 2004 in Beijing. It was a great pleasure for the Local Organizing Committee to organize the ISSW in China for the first time because forty-seven years have passed since the First Shock Tube Symposium was held in 1957 at Albuquerque. The ISSW24 had to be postponed for one year because of the SARS outbreak in Beijing shortly before the Symposium was scheduled to be held in 2003, but it has achieved success due to the continuous support and kind understanding from all the delegates. It is very heart-warming to have had such an experience and I am very happy to have served as chairman for the Symposium. I would like to thank all for the contributions and help that they have given us over the past three years without which we would not have had the Symposium. A total of 460 abstracts were submitted to the ISSW24. Each of the abstracts was evaluated by three members of the Scientific Review Committee and the decision on acceptance was made based on the reviewers' reports. 195 oral papers, including 9 plenary lectures, were accepted to be presented in three parallel sessions and 135 poster papers in three dedicated poster sessions. Topics discussed in these papers cover all aspects of shock wave research.

Refrigeration Systems and Applications Ciro Aprea, Angelo Maiorino, Adrián Mota Babiloni, 2019-12-06 The Special Issue *Refrigeration Systems and Applications* aims to encourage researchers to address the concerns associated with climate change and the sustainability of artificial cold production systems and to further the transition to the more sustainable technologies and methodologies of tomorrow through theoretical, experimental, and review research on the different applications of refrigeration and associated topics.

Elastomeric Polymers with High Rate Sensitivity Roshdy George S Barsoum, 2015-07-01 Recent investigations into blast-resistant properties of polyureas and other multi-phase polymeric elastomers indicate that they can dissipate broad bands of frequencies such as those encountered in blast events. In this unique book *Elastomeric Polymers with High Rate Sensitivity*, Dr. Roshdy Barsoum and expert contributors bring together the cutting-edge testing methodologies, material properties, and critical design data for engineers seeking to deploy this technology. Where conventional methods of resisting blast shockwaves and penetration are expensive, time-consuming, and impractical, high-strain-rate elastomeric polymers (HSREP) can be cheaper, quicker, and more easily applied to new and old materials alike. This book aids both military and civilian engineers in a range of applications from buildings and tunnels to lightweight armor ships and aircraft. The book features constitutive models for software developers designing with these advanced polymers as well as a discussion of the mechanisms of interaction between high-strain-rate polymers and other materials. It also thoroughly covers HSREP engineering methods to achieve other unique properties such as fireproofing. Material properties and design data included to enable engineers to successfully deploy this technology. Cheaper, quicker, and more easily implemented than traditional methods of increasing blast and ballistic performance. A how-to guide to the engineering of high-strain-rate elastomeric polymers to achieve other useful
