## **Shorebirds Of Australia:**

Shorebirds of Australia Andrew Geering, Lindsay Agnew, Sandra Harding, 2007-06-19 Winner of the 2008 Whitley Award for Field Guide Shorebirds of Australia brings together the latest information about the evolution ecology and behaviour of shorebirds and how they are distributed in Australia Complete with colour photographs and up to date distribution maps it provides descriptions and tips to assist with the identification of all species of shorebird in Australia which comprise about 10 per cent of Australia s total avifauna In addition to information about their habitats the most significant threats to their existence are mentioned as well as actions in place to help conserve these birds The book is a valuable reference for a broad range of people from birdwatchers and field naturalists to professional ornithologists and land managers entrusted with the responsibility of protecting Australia s natural resources especially its wetlands and coastal regions

**Shorebirds of Australia** Andrew Geering, Lindsay Agnew, Sandra Harding, 2007 Brings together the latest information about the behavior and biology of waders and how they are distributed on the Australian coast Describes and illustrates more than 50 species and provides an essential resource for ornithologists and professionals making decisions about conservation and land use practices

**Shorebirds in Australia** Brett A. Lane, Jeff Davies, 1987 *Waders* David Hollands, Clive Minton, 2012 This book provides a comprehensive account of all the 80 Australian species Many make huge and hazardous migrations to and from distant parts of the Northern Hemisphere Many take on colourful plumage for breeding while others retain their full beauty throughout the year

The Action Plan for Australian Birds 2010 Stephen Garnett, Judit Szabo, Guy Dutson, 2011-09-14 The Action Plan for Australian Birds 2010 is the third in a series of action plans that have been produced at the start of each decade The book analyses the International Union for Conservation of Nature IUCN status of all the species and subspecies of Australia s birds including those of the offshore territories For each bird the size and trend in their population and distribution has been analysed using the latest iteration of IUCN Red List Criteria to determine their risk of extinction The book also provides an account of all those species and subspecies that are or are likely to be extinct Each categorisation is justified on the basis of the latest research including much unpublished material that has been made available during workshops conducted with leading ornithologists and conservation biologists around the country as well as phone interviews and correspondence The result is the most authoritative account yet of the status of Australia s birds In this completely revised edition each account covers not only the 2010 status but provides a retrospective assessment of the status in 1990 and 2000 based on current knowledge taxonomic revisions and changes to the IUCN criteria and then reasons why the status of some taxa has changed over the last two decades Maps have been created specifically for the Action Plan based on vetted data drawn from the records of Birds Australia its members and its partners in many government departments The book contains some surprises some alarming some encouraging The status of some birds has improved over the last two decades as a result of dedicated conservation management Some may not have changed status but at least they are holding

their own. Many, however, are continuing to decline and a distressing number are new to the list. There is also an increasing number of birds for which captive insurance populations need not only to be considered as a future option but actively pursued before it is too late. But this is not a book of lost causes. It is a call for action to keep the extraordinary biodiversity we have inherited and pass the legacy to our children. Every one of Australia's threatened taxa can be saved. This book describes the populations of species at greatest risk and outlines ways we can turn them around.

2012 Whitley Award Commendation for Zoological Resource      *Shorebirds in Australia* Brett A. Lane, Jeff Davies, 1987      *Australian Saltmarsh Ecology* Neil Saintilan, 2009

Australian Saltmarsh Ecology presents the first comprehensive review of the ecology and management of Australian saltmarshes. The past 10 years in particular have seen a sustained research effort into this previously poorly understood and neglected resource. In ten chapters contributed by experts in each discipline, the book outlines what is known of the biogeography and geomorphology of Australian saltmarshes, their fish and invertebrate ecology, the use of Australian saltmarshes by birds and insectivorous bats, and the particular challenges of management including the control of mosquito pests and the issue of sea level rise. It provides a powerful argument that coastal saltmarsh is a unique and critical habitat vulnerable to the combined impacts of coastal development and sea level rise.

*Climate Change Adaptation Plan for Australian Birds* Stephen Garnett, Donald Franklin, 2014-05-30

This is the first climate change adaptation plan produced for a national faunal group anywhere in the world. It outlines the nature of threats related to climate change for the Australian bird taxa most likely to be affected by climate change and provides recommendations on what might be done to assist them and approximate costs of doing so. It also features an analysis of how climate change will affect all Australian birds, explains why some species are likely to be more exposed or sensitive to it than others, and explores the theory and practice of conservation management under the realities of a changing climate. Species profiles include maps showing current core habitat and modelled climatic suitability based on historical records, as well as maps showing projected climatic suitability in 2085 in relation to current core habitat.

Climate Change Adaptation Plan for Australian Birds is an important reference for policy makers, conservation scientists, land managers, climate change adaptation biologists, as well as bird watchers and advocacy groups.

*Finding Australian Birds* Tim Dolby, Rohan Clarke, 2014-05-28

From the eastern rainforests to central deserts, Australia is home to some 900 species of birds. This book covers over 400 Australian bird watching sites conveniently grouped into the best birding areas from one end of the country to the other. This includes areas such as Kakadu in the Top End and rocky gorges in the central deserts of the Northern Territory, the Great Barrier Reef in Queensland rainforests distributed along the eastern Australian seaboard, some of the world's tallest forests in Tasmania, the Flinders Ranges and deserts along the iconic Strzelecki and Birdsville Tracks in South Australia, and the mallee temperate woodlands and spectacular coastlines in both Victoria and south west Western Australia. Each chapter begins with a brief description of the

location followed by a section on where to find the birds which describes specific birdwatching sites within the location's boundaries and information on accommodation and facilities The book also provides a comprehensive Bird Finding Guide listing all of Australia's birds with details on their abundance and where exactly to see them Of value to both Australian birdwatchers and international visitors this book will assist novices birders of intermediate skill and keen twitchers to find any Australian species

**Emerging Infectious Diseases** ,2010 **The Action Plan for Australian Birds 2020** Stephen T. Garnett,G Barry Baker,2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019-20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated
