*Fifth Generation Warfare* Armin Krishnan, 2024-03-11 This book outlines the concept of Fifth Generation Warfare 5GW and demonstrates its relevance for understanding contemporary conflicts Non kinetic modes of attack and war waged by groups or non state actors at the societal level has been termed 5GW This book discusses the theory of generational warfare and explores the key ideas of 5GW such as secrecy the manipulation of proxies the manipulation of identity and culture including disinformation and big data and the use of psychological warfare These techniques are used to achieve strategic objectives such as inducing desired behaviour and controlling human terrain without resorting to overt war or overt violence The text expands the debate on 5GW by exploring emerging technologies and how they could be used for maliciously shaping human society and even for maliciously changing the genetic makeup of a population for the purpose of unprecedented social control The work closes with comments on the possibility of a Sixth Generation of Warfare which targets technical systems to possibly collapse a society through strategic sabotage Overall the book demonstrates the relevance of 5GW for understanding contemporary conflicts from the Arab Spring to the war in Ukraine in terms of the need for dominating the human domain This book will be of interest to students

**Changing War** Gary Sheffield, Peter Gray, 2013-10-24 In 1918 the British Expeditionary Force BEF played a critical role in defeating the German army and thus winning the First World War This Hundred Days campaign August to November 1918 was the greatest series of land victories in British military history 1918 also saw the creation of the Royal Air Force the world's first independent air service from the Royal Flying Corps and the Royal Naval Air Service Until recently British histories of the First World War have tended to concentrate on the earlier battles of 1916 and 1917 and often underplayed this vitally important period Changing War fills this significant gap in our knowledge by providing in depth examinations of key aspects of the operations of the British Army the Royal Air Force and its antecedents in the climactic year of the First World War Written by a group of established historians and emerging scholars it sheds light not only on 1918 but on the revolutionary changes in warfare that took place at that time

**US Intervention Policy and Army Innovation** Richard Lock-Pullan, 2004-08-02 US Intervention Policy and Army Innovation examines how the US Army rebuilt itself after the Vietnam War and how this has affected US intervention policy from the victory of the Gulf War to the failure of Somalia the Bosnian and Kosovo interventions and the use of force post 9 11 Richard Lock Pullan analyzes the changes in US military intervention strategy by examining two separate issues the nature of the US Army as it rebuilt itself after the Vietnam War and the attempts by the US to establish criteria for future military interventions He first argues that US strategy traditionally relied upon national mobilization to co ordinate political aims and military means he subsequently analyzes how this changed to a formula of establishing militarily achievable political objectives prior to the use of force Drawing on a vast body of material and on strategic culture and military innovation literature Lock Pullan demonstrates that the strategic lessons were a product of the rebuilding of the Army's identity as it became a professional all volunteer force

and that the Army's new doctrine developed a new way of war for the nation embodied in the AirLand Battle doctrine which changed the approach to strategy This book finally gives a practical analysis of how the interventions in Panama and the Gulf War vindicated this approach and brought a revived confidence in the use of force while more recent campaigns in Somalia Kosovo and Bosnia exposed its weaknesses and the limiting nature of the Army's thinking The legacy of the Army's innovation is examined in the new strategic environment post 9 11 with the operations in Afghanistan and Iraq

Indian and American Perspectives on Technological Developments in the Maritime Domain and Their Strategic Implications in the Indian Ocean Region Vice Admiral Pradeep Kaushiva,Commander Kamlesh K Agnihotri,2013-04-15 The maritime domain hosting the highways of global prosperity through trade industrial raw material and energy links rates high in its potential for conflict As the global pendulum of economic vibrancy swings eastwards the Indian Ocean Region IOR has been receiving increasing attention from all actors state as well as non state ones and now presents itself in sharp focus as one of the volatile seascapes on this earth The navies operating in the region will therefore need to depend on high technology and associated doctrines and procedures so as to effectively deal with the wide spectrum of challenges therein It will also become incumbent upon such littoral states as can afford the high cost of technology to catch up so as to maintain their relevance in the great game being played out in their very own backyard The United States as a leader in inventing and exploiting technology sets its own benchmarks in internalization of advanced technologies to undertake maritime missions at and from the sea in support of its military operations ashore China on the other hand has

been striving towards achieving asymmetric war fighting capabilities supported by other developing technologies as well as core capabilities like the Beidou position fixing system which would be central to network centric operations including missile guidance systems As the IOR increasingly transforms into an arena of extra regional power play the implications of technologically enabled confrontations and their impact on resident states are poised to weigh in on a scale never imagined before There is thus a greater need for India to gain in depth knowledge of and develop a perspective on advanced technology sensors weapons supporting infrastructures doctrines and futuristic concepts in the maritime domain and their potential as strategic game changers in the IOR This book aims to foster greater understanding of the challenges facing the IOR and also look at how the technological advances in the maritime domain may possibly handle such challenges It should provide useful resource material to those investigating the impact of technology on meeting the maritime challenges in the IOR

**Killer Robots** Armin Krishnan, 2016-04-22

Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law
