The Poverty of Economics Manuel Sanchis i Marco, 2024-09-19 This book improves the alignment of economics with the idea of justice the first virtue of any social

institution according to Rawls To this aim it provides the analytical framework necessary to ensure a just economy While today's notion of economics favours the economics of extortion this book proposes a model that transcends Lionel Robbins canonical relationship between ends and means as it proposes a broader notion of rationality incorporating the range of human attributes In contrast to Robbins economic rationality economic choices must be based on adequate and good reasons as Rescher claims because both the means and the ends require rational deliberation As a result the book challenges Robbins hope of turning general concepts like scarcity costs etc into universal economic principles guiding human behavior in a vacuum It disputes the idea that through the application of the abstract formulation of economic statements unconnected to reality economics can be rationalized in a morally neutral space based on empty rationality By contrasting the three rival versions of economics formalism axiomatic empiricism technocratic consequential and institutionalism axio ideological the book shows that it is not possible to switch between them as they refer to segmented mental universes of abstraction
