**The Historical Development of West Germany's New Left after 1968** Matthias Dapprich, 2018-03-14 There is a gap in the existing literature as to why the New Left in West Germany entered a phase of rapid decline by the end of the 1970s The overarching aim of this thesis is to offer a politico theoretical explanation for the historical development of the New Left and why the red decade

between 1967 and 1976/77 ended so abruptly. Within this context the thesis will focus on the Maoist K Gruppen and particular emphasis will be placed on the Marxistische Gruppe which defied the general decline of West Germany's New Left and developed into its largest organisation during the 1980s. Furthermore the Red Cells movement will be analysed from which both currents emerged in the wake of the student movement. In conclusion this thesis will reveal that the influence of politico-theoretical aspects on the historical development of the New Left has been given too little consideration and that the New Left's fate cannot be adequately explained by external factors but demands the consideration of the very development of theories and the practical conclusions organisations reached regarding their social, economic and cultural circumstances. This work will be the first to provide an insight into the potential of such a theoretical explanation for an understanding of the specific developments of the post 1968 West German New Left.

**The Palgrave Encyclopedia of the Possible** Vlad Petre Glăveanu, 2023-01-25 The Palgrave Encyclopedia of the Possible represents a comprehensive resource for researchers and practitioners interested in an emerging multidisciplinary area within psychology and the social sciences: the study of how we engage with and cultivate the possible within self, society and culture. Far from being opposed either to the actual or the real, the possible engages with concrete facts and experiences with the result of transforming them. This encyclopedia examines the notion of the possible and the concepts associated with it from standpoints within psychology, philosophy, sociology, neuroscience and logic as well as multidisciplinary fields of research including anticipation studies, future studies, complexity theory and creativity research. Presenting multiple perspectives on the possible, the authors consider the distinct social, cultural and psychological processes e.g. imagination, counterfactual thinking, wonder, play, inspiration and many others that define our engagement with new possibilities in domains as diverse as the arts, design and business.

Reader's Guide to the Social Sciences Jonathan Michie, 2014-02-03 This 2 volume work includes approximately 1,200 entries in A-Z order, critically reviewing the literature on specific topics from abortion to world systems theory. The Psychological Development of Girls and Women Sheila Greene, 2014-11-27 Choice Recommended Read This thoroughly revised new edition updates Sheila Greene's original transformative account of the psychological development of girls and women and the central role of time in shaping human experience. Greene critically reviews traditional and contemporary theoretical approaches ranging from orthodox psychoanalysis to relational and post-modern theories and argues that even those that claim to focus on development have presented a view of women's lives as fixed and determined by their nature or their past. These theories she believes should be rejected because of their inherent lack of validity and their frequently oppressive implications for women. Essential but often neglected insights from the more compelling developmental and feminist theories are woven together within a theoretical framework that emphasizes temporality, emergence and human agency. The result is a liberating

theory of women's psychological development as constantly emerging and changing in time rather than as static and fixed by their nature socio cultural context and personal history Updated for a new generation of readers The Psychological Development of Girls and Women will continue to be essential reading for students and researchers in the psychology of women developmental psychology and women's studies

**Student Engagement in Neoliberal Times** Nick Zepke, 2016-12-14 This book investigates origins meanings uses and effects of student engagement in higher education and addresses three core questions 1 Why is student engagement so visible in higher education today 2 What are its dominant characteristics 3 What is missing in the popular view of student engagement These questions pave the way for a fresh approach to student engagement The book argues that an elective affinity between student engagement and policies embedded in neoliberalism the dominant ideology of the early 21st century enables student engagement to transcend diverse intellectual and practice contexts This affinity encourages quality learning and teaching that enables student to succeed in their studies and future careers The book shows that focusing on neoliberal objectives for learning and teaching limits the potential of student engagement in higher education This conclusion leads to a critical and practical social ecological perspective that approaches engagement more as a pathway to social justice than as a list of techniques This book is a work of critical scholarship backed by empirical research It questions accepted theories and practices and offers fresh insights into student engagement in higher education including how engagement could promote social justice

**Psychology's Misuse of Statistics and Persistent Dismissal of its Critics** James T. Lamiell, 2019-03-27 This book is a strenuous critique of the misinterpretation of statistical knowledge of populations in mainstream psychology exploring the implications of assuming that those statistics constitute scientific knowledge of individuals It investigates the essential nature and historical roots of this interpretive practice and documents the lack of change in mainstream thinking despite previous critiques of the practice The author contends that prevailing interpretive traditions result in bad science in that invalid claims are made to knowledge of individuals He also discusses the socio ethical problems resulting from this misinterpretation of statistics where psychological practitioners unjustifiably endorse interventions in the lives of individuals Lamiell urges psychologists to abandon the aggregate statistical methods which he argues have transformed the field into psycho demography and to embrace instead alternative research methods that are logically suited to gaining scientific knowledge about the psychological functioning of individuals This book concludes by highlighting some of the currently available methodological alternatives as well as discussing some enduring conceptual impediments to the serious consideration of those alternatives
