Ramsey Methods In Analysis Advanced Courses In Mathematics Crm Barcelona:

Ramsey Methods in Analysis Spiros A. Argyros, Stevo Todorčević, 2006-03-30 This book contains two sets of notes prepared for the Advanced Course on Ramsey Methods in Analysis given at the Centre de Recerca Matemàtica in January 2004 as part of its year long research programme on Set Theory and its Applications The common goal of the two sets of notes is to help young mathematicians enter a very active area of research lying on the borderline between analysis and combinatorics The solution of the distortion problem for the Hilbert space the unconditional basic sequence problem for Banach spaces and the Banach homogeneous space problem are samples of the most important recent advances in this area and our two sets of notes will give some account of this But our main goal was to try to expose the general principles and methods that lie hidden behind and are most likely useful for further developments The goal of the first set of notes is to describe a general method of building norms with desired properties a method that is clearly relevant when testing any sort of intuition about the infinite dimensional geometry of Banach spaces The goal of the second set of notes is to expose Ramsey theoretic methods relevant for describing the rough structure present in this sort of geometry We would like to thank the coordinator of the Advanced Course Joan Barria and the director of the CRM Manuel Castellet for giving us this challenging but rewarding opportunity

Part A Saturated and Conditional Structures in Banach Spaces Spiros A. Argyros, Stevo Todorčević, 2005-05-19 This book contains two sets of notes prepared for the Advanced Course on Ramsey Methods in Analysis given at the Centre de Recerca Matemàtica in January 2004 as part of its year long research programme on Set Theory and its Applications The common goal of the two sets of notes is to help young mathematicians enter a very active area of research lying on the borderline between analysis and combinatorics The solution of the distortion problem for the Hilbert space the unconditional basic sequence problem for Banach spaces and the Banach homogeneous space problem are samples of the most important recent advances in this area and our two sets of notes will give some account of this But our main goal was to try to expose the general principles and methods that lie hidden behind and are most likely useful for further developments The goal of the first set of notes is to describe a general method of building norms with desired properties a method that is clearly relevant when testing any sort of intuition about the infinite dimensional geometry of Banach spaces The goal of the second set of notes is to expose Ramsey theoretic methods relevant for describing the rough structure present in this sort of geometry We would like to thank the coordinator of the Advanced Course Joan Barria and the director of the CRM Manuel Castellet for giving us this challenging but rewarding opportunity

Part A Saturated and Conditional Structures in Banach Spaces Spiros A. Argyros, Stevo Todorčević, 2005 We also apply the Nash Williams theory of fronts and barriers in the study of Cezaro summability and unconditionality present in basic sequences inside a given Banach space We further provide a detailed exposition of the block Ramsey theory and its recent deep adjustments relevant to the Banach space theory due to Gowers **BOOK JACKET**

Banach Spaces and their Applications in Analysis Beata Randrianantoanina, Narcisse Randrianantoanina, 2011-12-22 In recent years there has been a surge of profound new developments in various aspects of analysis whose connecting thread is the use of Banach space methods. Indeed many problems seemingly far from the classical geometry of Banach spaces have been solved using Banach space techniques. This volume contains papers by participants of the conference Banach Spaces and their Applications in Analysis held in May 2006 at Miami University in Oxford Ohio in honor of Nigel Kalton's 60th birthday. In addition to research articles contributed by participants the volume includes invited expository articles by principal speakers of the conference who are leaders in their areas. These articles present overviews of new developments in each of the conference's main areas of emphasis namely nonlinear theory isomorphic theory of Banach spaces including connections with combinatorics and set theory algebraic and homological methods in Banach spaces approximation theory and algorithms in Banach spaces. This volume also contains an expository article about the deep and broad mathematical work of Nigel Kalton written by his long time collaborator Gilles Godefroy. Godefroy's article and in fact the entire volume illustrates the power and versatility of applications of Banach space methods and underlying connections between seemingly distant areas of analysis.

Applications of Model Theory to Functional Analysis Jose Iovino, 2014-11-19 The first self contained introduction to techniques of model theory this 2002 text presents material still not readily available elsewhere including Krivine's theorem and the Krivine Maurey theorem on stable Banach spaces.

Combinatorial Set Theory Lorenz J. Halbeisen, 2011-11-24 This book provides a self contained introduction to modern set theory and also opens up some more advanced areas of current research in this field. The first part offers an overview of classical set theory wherein the focus lies on the axiom of choice and Ramsey theory. In the second part the sophisticated technique of forcing originally developed by Paul Cohen is explained in great detail. With this technique one can show that certain statements like the continuum hypothesis are neither provable nor disprovable from the axioms of set theory. In the last part some topics of classical set theory are revisited and further developed in the light of forcing. The notes at the end of each chapter put the results in a historical context and the numerous related results and the extensive list of references lead the reader to the frontier of research. This book will appeal to all mathematicians interested in the foundations of mathematics but will be of particular use to graduates in this field.

Sets and Extensions in the Twentieth Century, 2012-01-24 Set theory is an autonomous and sophisticated field of mathematics that is extremely successful at analyzing mathematical propositions and gauging their consistency strength. It is as a field of mathematics that both proceeds with its own internal questions and is capable of contextualizing over a broad range which makes set theory an intriguing and highly distinctive subject. This handbook covers the rich history of scientific turning points in set theory providing fresh insights and points of view. Written by leading researchers in the field both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates graduate students and researchers in mathematics the history of philosophy and any discipline such as
