Rancho La Brea Death Trap Treasure Trove:

Rancho La Brea John M. Harris, 2001 *Los Angeles's La Brea Tar Pits and Hancock Park* Cathy McNassor, 2011 Ever since the first popular article on the Rancho La Brea Tar Pits was published in Sunset magazine in 1908 this amazing Ice Age fossil site has captivated the imaginations of countless people from all over the world This death trap of the ages and its population of saber toothed cats dire wolves and other extinct animals now displayed in the stunning George C Page Museum continues to be one of the most popular tourist attractions in Los Angeles George Allan Hancock donated the 26 acre site to the County of Los Angeles in 1924 to preserve this scientific treasure trove for research and the enjoyment of future generations *Vanished Giants* Anthony J. Stuart, 2021-01-28 Featuring numerous illustrations this book explores the many lessons to be learned from Pleistocene megafauna including the role of humans in their extinction their disappearance at the start of the Sixth Extinction and what they might teach us about contemporary conservation crises Long after the extinction of dinosaurs when humans were still in the Stone Age woolly rhinos mammoths mastodons sabertooth cats giant ground sloths and many other spectacular large animals that are no longer with us roamed the Earth These animals are regarded as Pleistocene megafauna named for the geological era in which they lived also known as the Ice Age In *Vanished Giants* The Lost World of the Ice Age paleontologist Anthony J Stuart explores the lives and environments of these animals moving between six continents and several key islands Stuart examines the animals themselves via what we've learned from fossil remains and he describes the landscapes climates vegetation ecological interactions and other aspects of the animals existence Illustrated throughout *Vanished Giants* also offers a picture of the world as it was tens of thousands of years ago when these giants still existed Unlike the case of the dinosaurs there was no asteroid strike to blame for the end of their world Instead it appears that the giants of the Ice Age were driven to extinction by climate change human activities especially hunting or both Drawing on the latest evidence provided by radiocarbon dating Stuart discusses these possibilities The extinction of Ice Age megafauna can be seen as the beginning of the so called Sixth Extinction which is happening right now This has important implications for understanding the likely fate of present day animals in the face of contemporary climate change and vastly increasing human populations **Sacred Sites** Susan Sontree, 2020-06 A history that is equal parts science and mythology *Sacred Sites* offers a rare and poetic vision of a world composed of dynamic natural forces and mythic characters The result is a singular and memorable account of the evolution of the Southern California landscape reflecting the riches of both Native knowledge and Western scientific thought Beginning with Western science poet Susan Sontree carries readers from the Big Bang to the present as she describes the origins of the universe the shifting of tectonic plates and an evolving array of plants and animals that give Southern California its unique features today She tells of the migration of humans into the region where they settled and how they lived Complementing this narrative and reflecting Native peoples view of their own history and way of life Sontree recounts the creation myths and songs that tell the story of

the First People and of unforgettable shamans and heroes Featuring contemporary photographs of rarely seen landmarks along with meticulous research Sacred Sites provides unusual insight into how natural history and mythology and scientific and intuitive thinking combine to create an ever deepening sense of a place and its people The Saber-Toothed Tiger Josée Perrine,2010-03-11 Violence against women in their own homes at the hands of their husbands was not treated as a crime in the United States until the early 1990s At that time laws were passed with the intention of not only protecting women but also to eliminate domestic violence altogether through prosecution of abusers and mandated counseling for offenders Therapists were trained to re educate men who batter women and safe shelters and temporary protection orders were provided to help women leave their abusers Despite almost two decades of legal intervention and education domestic violence continues and services are now directed at ever younger victims some as early as middle school It is clear that laws and shelters are not enough This book at last answers the question Why does she stay The other half of the equation the underlying reason that keeps women in abusive relationships is finally addressed and defined There is only one reason why they staythe symbolic Saber Toothed Tiger This book is a long needed explanation for the continuing trauma of domestic terrorism and it offers the solution to both victims and the therapists who help them Skeleton Keys Brian Switek,2019 In this natural and cultural history of bone Brian Switek explains where our skeletons came from what they do inside us and what others can learn about us when these wondrous assemblies of mineral and protein are all we ve left behind He makes a compelling case for getting better acquainted with our skeletons in all their surprising roles Bridging the worlds of paleontology anthropology medicine and forensics Skeleton Keys illuminates the complex life of bones inside our bodies and out I Feel Earthquakes More Often Than They Happen Amy Wilentz,2006-08-22 From one of our most astute contemporary writers Amy Wilentz comes an irreverent inventive portrait of the state of California and its unlikely governor Arnold Schwarzenegger The prizewinning author a lifelong easterner and an outsider in the West takes the reader on a picaresque journey from exclusive Hollywood soirees to a fantasy city in the Mojave desert from the La Brea Tar Pits to celebrity besotted Sacramento from the tents of Skid Row to surf drunk Malibu from a snowbird retreat near Mexico to the hippie preserve of tide beaten Big Sur along the way offering up sharp observations on politics fund raising the water supply the Beach Boys earthquake preparedness home economics catastrophism movie star politicians political movie stars Charlie Manson and location scouts who want to rent your house in order to make television commercials for bathroom wall cleansers or Swedish banks Wilentz moved to Los Angeles from a Manhattan wounded by September 11 only to discover a paradise marred by fire flood and mudslides In what seemed like a joke to her a Democratic governor nicknamed Gummy was about to be ousted by an Austrian muscleman in a bizarre election promoted by a millionaire whose business was car alarms Intrigued she set out to find the essence of the quirky trailblazing state During her travels she spots celebrities but can t quite place them drops in on famous salons with habitu s like Warren Beatty and Arianna Huffington and visits the neglected

office of one very special 9 000 year old woman Plunging into the traffic of California Wilentz noodles out meaning in some of the least likely of places she sees the political in the personal and the personal in the political By now an expert on tremors real and imagined she offers readers on both coasts insights into where California stands today and America as well

Ecosystems of California Harold Mooney,Erika Zavaleta,2016-01-19 This long anticipated reference and sourcebook for California s remarkable ecological abundance provides an integrated assessment of each major ecosystem type its distribution structure function and management A comprehensive synthesis of our knowledge about this biologically diverse state Ecosystems of California covers the state from oceans to mountaintops using multiple lenses past and present flora and fauna aquatic and terrestrial natural and managed Each chapter evaluates natural processes for a specific ecosystem describes drivers of change and discusses how that ecosystem may be altered in the future This book also explores the drivers of California s ecological patterns and the history of the state s various ecosystems outlining how the challenges of climate change and invasive species and opportunities for regulation and stewardship could potentially affect the state s ecosystems The text explicitly incorporates both human impacts and conservation and restoration efforts and shows how ecosystems support human well being Edited by two esteemed ecosystem ecologists and with overviews by leading experts on each ecosystem this definitive work will be indispensable for natural resource management and conservation professionals as well as for undergraduate or graduate students of California s environment and curious naturalists **Tiger**

Bone & Rhino Horn Richard Ellis,2013-02-22 In parts of Korea and China moon bears black but for the crescent shaped patch of white on their chests are captured in the wild and brought to bear farms where they are imprisoned in squeeze cages and a steel catheter is inserted into their gall bladders The dripping bile is collected as a cure for ailments ranging from an upset stomach to skin burns The bear may live as long as fifteen years in this state Rhinos are being illegally poached for their horns as are tigers for their bones thought to improve virility Booming economies and growing wealth in parts of Asia are increasing demand for these precious medicinals Already endangered species are being sacrificed for temporary treatments for nausea and erectile dysfunction Richard Ellis one of the world s foremost experts in wildlife extinction brings his alarm to the pages of Tiger Bone Rhino Horn in the hope that through an exposure of this drug trade something can be done to save the animals most direly threatened Trade in animal parts for traditional Chinese medicine is a leading cause of species endangerment in Asia and poaching is increasing at an alarming rate Most of traditional Chinese medicine relies on herbs and other plants and is not a cause for concern Ellis illuminates those aspects of traditional medicine but as wildlife habitats are shrinking for the hunted large species the situation is becoming ever more critical One hundred years ago there were probably 100 000 tigers in India South China Sumatra Bali Java and the Russian Far East The South Chinese Caspian Balinese and Javan species are extinct There are now fewer than 5 000 tigers in all of India and the numbers are dropping fast There are five species of rhinoceros three in Asia and two in Africa and all have been hunted to

near extinction so their horns can be ground into powder not for aphrodisiacs as commonly thought but for ailments ranging from arthritis to depression In 1930 there were 80 000 black rhinos in Africa Now there are fewer than 2 500 Tigers bears and rhinos are not the only animals pursued for the sake of alleviating human ills the list includes musk deer sharks saiga antelope seahorses porcupines monkeys beavers and sea lions but the dwindling numbers of those rare species call us to attention Ellis tells us what has been done successfully and contemplates what can and must be done to save these animals or sadly our children will witness the extinction of tigers rhinos and moon bears in their lifetime Radiocarbon Dating R.E. Taylor, Ofer Bar-Yosef, 2016-06-03 This volume is a major revision and expansion of Taylor s seminal book Radiocarbon Dating An Archaeological Perspective It covers the major advances and accomplishments of the 14C method in archaeology and analyzes factors that affect the accuracy and precision of 14C based age estimates In addition to reviewing the basic principles of the method it examines 14C dating anomalies and means to resolve them and considers the critical application of 14C data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology This volume again a benchmark for 14C dating critically reflects on the method and data that underpins in so many cases the validity of the chronologies used to understand the prehistoric archaeological record **Landscape Architecture** ,2004 Biogeochemistry and the Environment Michael O'Neal Campbell, 2023-12-14 Biogeochemistry may be defined as the science that combines biological and chemical perspectives for the examination of the Earth s surface including the relations between the biosphere lithosphere atmosphere and hydrosphere Biogeochemistry is a comparatively recently developed science that incorporates scientific knowledge and findings research methodologies and models linking the biological chemical and earth sciences Therefore while it is a definitive science with a strong theoretical core it is also dynamically and broadly interlinked with other sciences This book examines the complex science of biogeochemistry from a novel perspective examining its comparatively recent development while also emphasizing its interlinked relationship with the earth sciences including the complementary science of geochemistry the geographical sciences biogeography oceanography geomatics earth systems science the biological sciences ecology wildlife studies biological aspects of environmental sciences and the chemical sciences including environmental chemistry and pollution The book covers cutting edge topics on the science of biogeochemistry examining its development structure interdisciplinary multidisciplinary and transdisciplinary relations and the future of the current complex knowledge systems especially in the context of technological developments and the computer and data fields **Spring 2004 Field Conference** National Association of Geoscience Teachers. forever during the relatively recent geological past Each entry provides a concise discussion of the history of the animal how and where it lived and how it became extinct as well as the scientific discovery and analysis of the creature In addition this work examines what led to extinction from the role of cyclical swings in the Earth s climate to the spread of humans and their activities Many scientists believe that we are in the middle of a mass extinction right now caused by the human undermining of the earth s complex systems that support life Understanding what caused the extinction of animals in the past may help us understand and prevent the extinction of species in the future Extinct Animals examines the biology and history of some of the most interesting creatures that have ever lived including The American Terror Bird which probably became extinct over 1 million years ago who were massive predators some of which were almost 10 feet tall the Rocky Mountain Locust last seen in 1902 formed the most immense animal aggregations ever known with swarms estimated to include over 10 trillion insects the Giant Ground Sloth which was as large as an elephant and the Neandertals the first Europeans which co existed with prehistoric Homo sapiens Extinct Animals includes illustrations many created for the work that help the reader visualize the extinct creature and each entry concludes with a list of resources for those who wish to do further research

Lo scheletro nell'armadio Brian Switek,2020-02-13 Pensate alle vostre ossa al delicato meccanismo del gomito alla robusta spina dorsale che ci imparenta con ogni vertebrato mai vissuto al modo in cui l articolazione della spalla ruota e ci permette movimenti impensabili per altri animali Non possiamo vederle ma queste strutture celate dalla pelle e avvolte dai muscoli custodiscono la nostra storia individuale i segreti dell evoluzione e l immaginario religioso e culturale di ogni popolo vivente o estinto Lo scheletro nell armadio ci racconta tutto delle nostre ossa di come ci accomunino agli altri esseri viventi di come ancora oggi nel nostro scheletro si trovino tracce dei primi ominidi di protomammiferi vissuti all ombra dei dinosauri di pesci preistorici dalle cui pinne si sono evolute le nostre mani e di minuscoli organismi dei mari primordiali Di come abbiamo modellato il nostro mondo gli strumenti che usiamo le citt in cui viviamo in base a quello che le nostre articolazioni possono o non possono fare Di come le nostre ossa solo in apparenza rigide continuino a rinnovarsi e a crescere durante tutta la vita tenendo traccia dei traumi sofferti dei cibi di cui ci siamo nutriti e delle esperienze che abbiamo vissuto Di come da antichi resti e sepolture abbiamo potuto ricostruire la storia di uomini e donne per troppo tempo dimenticati di re battaglie popoli e intere culture Di come scheletri e teschi nonostante siano stati spesso scelti come simboli di morte e caducit paradossalmente siano la parte di noi che durer pi a lungo e continuer a parlare della nostra vicenda umana In queste pagine Brian Switek spazia dalla biologia cellulare al culto delle reliquie dall artrite dei dinosauri alle collezioni anatomiche di musei e universit e ai metodi non troppo etici con cui sono state assemblate e ci rivela come i pi grandi segreti siano celati proprio dentro di noi
