Alameda, 2005-11-02 Modern hydrology is more interdisciplinary than ever Staggering amounts and varieties of information pour in from GIS and remote sensing systems every day and this information must be collected interpreted and shared efficiently *Hydroinformatics Data Integrative Approaches in Computation Analysis and Modeling* introduces the tools approach Overexploitation and Contamination of Shared Groundwater Resources Christophe J.G. Darnault, 2008-02-02 Forty percent of the world's population depends upon increasingly scarce and shared water resources This situation is critical at both international and national levels not only for socio economic development but also for the regional stability The intensive use of groundwater for irrigation and water supply is adding pressures to scarce water resources and the environment through overexploitation and contamination which result in situations that may lead to conflicts The book from the NATO ASI on Overexploitation and Contamination of Shared Groundwater Resources Management Bio technological and Political Approaches to Avoid Conflicts is written by authors from different disciplines and regions of the world The aim of the book is to contribute to the knowledge of shared groundwater resources management to avoid conflicts by considering multi disciplinary approaches based on

effective and equitable water sharing for all water users through cooperation and within a compassionate ecological framework along with the need for sustainable resources development and the quest for environmental and human security. The scope of the book covers the hydrogeological environmental bio technological and management aspects of shared groundwater resources integrating social economic and political dimensions as well as legal and educational perspectives.

Groundwater Hydrology of Springs Neven Kresic, Zoran Stevanovic, 2009-08-29 Groundwater Hydrology of Water Resource Series. Water is an essential environmental resource and one that needs to be properly managed. As the world places more emphasis on sustainable water supplies, the demand for expertise in hydrology and water resources continues to increase. This series is intended for professional engineers who seek a firm foundation in hydrology and an ability to apply this knowledge to solve problems in water resource management. Future books in the series are Groundwater Hydrology of Springs 2009, Groundwater Hydrology of River Basins 2009, Groundwater Hydrology of Aquifers 2010, and Groundwater Hydrology of Wetlands 2010. First utilized as a primary source of drinking water in the ancient world, springs continue to supply many of the world's cities with water. In recent years, their long-term sustainability is under pressure due to an increased demand from groundwater users. Edited by two world-renowned hydrologists, *Groundwater Hydrology of Springs: Theory, Management, and Sustainability* will provide civil and environmental engineers with a comprehensive reference for managing and sustaining the water quality of springs. With contributions from experts from around the world, this book covers many of the world's largest springs, providing a unique global perspective on how engineers around the world are utilizing engineering principles for coping with problems such as mismanagement, overexploitation, and their impacts on both water quantity and quality. The book will be divided into two parts: part one will explain the theory and principles of hydrology as they apply to springs, while part two will provide a rare look into the engineering practices used to manage some of the most important springs from around the world. Description of the spring and the aquifer feeding it; Latest groundwater and contaminant transport models; Description of sources of aquifer use; Understanding of contamination and/or possible contamination; A plan for management and sustainability. **Flood Forecasting Using Artificial Neural Networks** P

Varoonchotikul, 2003-01-01. Flood disasters continue to occur in many countries in the world and cause tremendous casualties and property damage. To mitigate the effects of floods, a range of structural and non-structural measures have been employed, including dykes, channelling, flood proofing, property land use regulation, and flood warning schemes. Such schemes can include the use of Artificial Neural Networks (ANN) for modelling the rainfall run-off process, as it is a quick and flexible approach which gives very promising results. However, the inability of ANN to extrapolate beyond the limits of the training range is a serious limitation of the method, and this book examines ways of side-stepping or solving this complex issue.

**Artificial Neural Networks in Hydrology** R.S. Govindaraju, A.R. Rao, 2013-03-09. R. S. GOVINDARAJU and ARAMACHANDRA RAO, School of Civil Engineering, Purdue University, West Lafayette, IN, USA. Background and Motivation

The basic notion of artificial neural networks ANNs as we understand them today was perhaps first formalized by McCulloch and Pitts 1943 in their model of an artificial neuron Research in this field remained somewhat dormant in the early years perhaps because of the limited capabilities of this method and because there was no clear indication of its potential uses However interest in this area picked up momentum in a dramatic fashion with the works of Hopfield 1982 and Rumelhart et al 1986 Not only did these studies place artificial neural networks on a firmer mathematical footing but also opened the door to a host of potential applications for this computational tool Consequently neural network computing has progressed rapidly along all fronts theoretical development of different learning algorithms computing capabilities and applications to diverse areas from neurophysiology to the stock market Initial studies on artificial neural networks were prompted by a desire to have computers mimic human learning As a result the jargon associated with the technical literature on this subject is replete with expressions such as excitation and inhibition of neurons strength of synaptic connections learning rates training and network experience ANNs have also been referred to as neurocomputers by people who want to preserve this analogy **Applied**

**Hydrological Models for Environmental Management** Mikhail V. Bolgov,Lars Gottschalk,Irina Krasovskaia,Robert J. Moore,2012-12-06 This book contains a selection of papers from a NATO Advanced Research Workshop entitled Stochastic models of hydrological processes and their applications to problems of environmental preservation convened in Moscow over the period 23-27 November 1998 The Workshop was unique in providing the first opportunity for over a decade for countries of the Russian Federation to interact with other countries across the world to discuss hydrological science issues relevant to environmental management The contrasting schools of thought within the Russian Federation and with other countries proved a fascinating and valuable experience for those fortunate enough to attend The scientific content of the Workshop was motivated by a number of concerns Water is a key natural resource whose modelling and management is made complex by its inherent spatial unevenness and time variability Traditional methods for investigating hydrological processes in nature employ stochastic modelling and forecasting However these are not well developed with regard to i representing the characteristics of hydrological regimes and ii investigating the influence of water factors on processes which arise in biological systems and those involving hydrochemical geophysical and other processes

*Introduction to Geostatistics* P. K. Kitanidis,1997-05-13 Engineers and applied geophysicists routinely encounter interpolation and estimation problems when analysing data from field observations Introduction to Geostatistics presents practical techniques for the estimation of spatial functions from sparse data The author s unique approach is a synthesis of classic and geostatistical methods with a focus on the most practical linear minimum variance estimation methods and includes suggestions on how to test and extend the applicability of such methods The author includes many useful methods often not covered in other geostatistics books such as estimating variogram parameters evaluating the need for a variable mean parameter estimation and model testing in complex cases e g anisotropy variable mean and multiple variables and using information from deterministic mathematical models Well illustrated with exercises and worked examples taken from hydrogeology Introduction to Geostatistics assumes no background in statistics and is suitable for graduate level courses in earth sciences hydrology and environmental engineering and also for self study
