Analysis, Approximation, Optimization: Computation and Applications Marija P. Stanić, Miloljub Albijanić, Dragan Djurčić, Miodrag M. Spalević, 2025-07-14. This contributed volume is dedicated to Academician Gradimir V. Milovanović on his 75th birthday and contains recent results in the fields of approximation theory, numerical analysis, mathematical analysis, optimization theory, and various applications of an interdisciplinary character. Most of these results were presented in person during an International Conference Analysis Approximations and Applications AAA2023 organized by the Faculty of Science, University of Kragujevac in Vrnjačka Banja, Serbia, June 21-24, 2023. This book is intended for researchers and students of mathematics and other computational and applied sciences. This book provides surveys of state-of-the-art results in the fields of Extremal Problems, Optimization, and Calculus of Variations, Orthogonal Systems and Quadrature Formulas, Differential and Integral Equations, Integral Transforms, and Operator Calculus, Analytic Number Theory, and Special Functions, Real and Complex Functions, Sequences, Series, Approximations and Expansions, Functional Analysis, Operator Theory, Fixed Point Theory, and Iterative Processes, as well as in Miscellaneous Applications.

Diophantine Approximation and Dirichlet Series Hervé Queffélec, Martine Queffélec, 2021-01-27. The second edition of the book includes a new chapter on the study of composition operators on the Hardy space and their complete characterization by Gordon and Hedenmalm. The book is devoted to Diophantine approximation, the analytic theory of Dirichlet series, and their composition operators and connections between these two domains which often occur through the Kronecker approximation theorem and the Bohr lift. The book initially discusses Harmonic analysis including a sharp form of the uncertainty principle, Ergodic theory, and Diophantine approximation basics on continued fractions, expansions, and the mixing property of the Gauss map, and goes on to present the general theory of Dirichlet series with classes of examples connected to continued fractions, Bohr lift, sharp forms of the Bohnenblust-Hille theorem, Hardy-Dirichlet spaces, composition operators of the Hardy-Dirichlet space, and much more. Proofs throughout the book mix Hilbertian geometry, complex and harmonic analysis, number theory, and ergodic theory, featuring the richness of analytic theory of Dirichlet series. This self-contained book benefits beginners as well as researchers.
