

The background is a collage of six aerial photographs showing different stages of Dutch urban planning. Top-left: A harbor with many small boats and a long pier. Top-right: A coastal town with a large harbor and a bridge. Middle-left: A wide, sandy beach next to a body of water. Middle-right: A suburban residential area with a grid of streets and a central green space. Bottom-left: A dense urban area with many tall buildings. Bottom-right: A large industrial or commercial area with many large, flat-roofed buildings. The title 'Ruimtelijke ordening' is written in large, white, sans-serif letters across the collage. The word 'Ruimtelijke' is on the top row, 'ordening' is on the middle row, and 'ning' is on the bottom row. The letters are partially obscured by the images and the grid lines.

Ruimtelijke Ordening:

Handboek ruimtelijke ordening in Vlaanderen en Brussel - ed. 2005 Johan Rutgeerts, 2005 Ruimtelijke ordening. Hete hangijzers voor de onderneming, 1999 **Design and politics** Henk Ovink, Elien Wierenga, 2009 In establishing a professorship in Design Politics at Delft University of Technology the Ministry of Housing Spatial Planning and the Environment has launched a program of education research and practice for the spatial design of the Netherlands aimed at reinforcing the interaction between design and politics The purpose of this book is to offer inspiration and an organizing framework for that program based on history reflection policy and just as importantly ambition The book traces the history of the Netherlands thinkers makers and builders It provides an understanding of how the roles and relationships in Dutch spatial planning have been transformed and of the ideals systems and processes that have been strengthened through confrontation And it reflects on the situation today Through excerpts from conversations with designers officials decision makers researchers and other experts the editors seek to demonstrate the array of narratives in the Netherlands and abroad Challenges in Dutch politics and design whether minor or major reflect these narratives and the confrontation between them Such confrontation is essential not just to foster thoughtful deliberation but also to uncover alternatives eventualities and potentials *Environmental Planning in the Netherlands: Too Good to be True* Gert de Roo, 2017-03-02 The Netherlands is one of the most prominent and innovative countries in the field of environmental planning Over the past decade its government has introduced such ground breaking schemes as Integrated Environmental Zoning the City Environment Project the Bubble Concept and Policy Concepts and new approaches to coping with noise odours soil pollution air pollution and safety issues These initiatives and policy tools reflect a rapidly changing and decentralising environmental policy which contrasts with more conventional environmental ideologies However at present little is known of these policies in the international arena De Roo shows how and why in recent years the country s planning system has moved away from its traditional top down structure The resulting changes have had far reaching consequences for the traditional principles of Dutch environmental policy In addition measures for compensating excessive environmental loads are now open to discussion and environmental quality is a subject of negotiation among stakeholders All these developments mean that environmental policy making has become more closely integrated with local initiatives that focus on general location specific qualities In this book this development is referred to as tailor made comprehensive planning which relates closely to the local context is area specific situation dependent and embraces shared governance **Sturing in de ruimtelijke ordening door Rijk en provincies** C.P. Hageman, 2016-12-22 Ruimtelijke ordening is in Nederland van oudsher een gedecentraliseerd verschijnsel Juridisch bindende beslissingen over de ontoelatenbaarheid van ruimtelijke ontwikkelingen worden in beginsel op gemeentelijk niveau genomen In dit uitgangspunt lijkt vandaag de dag op het eerste gezicht weinig veranderd Zowel de huidige Wet ruimtelijke ordening Wro als de aankomende Omgevingswet zijn opgebouwd volgens het principe decentraal

tenzij Gedurende de afgelopen decennia is het publiekrechtelijke instrumentarium van Rijk en provincies echter sterk uitgebreid Op nationaal en provinciaal niveau zijn verschillende nieuwe bevoegdheden geïntroduceerd in de sfeer van vergunningverlening en projectbesluitvorming Daarnaast zijn Rijk en provincies ook in interbestuurlijke verhoudingen steeds uitgebreider toegerust om beleid te laten doorwerken Deze monografie onderzoekt huidig en toekomstig recht vanuit het perspectief van ruimtelijke sturing Dit komt neer op een juridische studie naar het inmiddels omvangrijke instrumentarium waarmee het Rijk en de provincies de ruimtelijke ordening kunnen beïnvloeden In het kader van directe sturing komen nationale en provinciale bevoegdheden op grond van de Wro de Crisis en herstelwet en de Trac wet aan bod In de sfeer van indirecte sturing komen naast algemene regels en aanwijzingsbevoegdheden op grond van de Wro ook interbestuurlijke bevoegdheden in organieke wetgeving aan de orde Hierbij wordt in detail ingegaan op de verhouding tussen beleidsdoorwerking en interbestuurlijk toezicht evenals de gevolgen van de recente revitalisering van het generiek interbestuurlijk toezicht Een apart hoofdstuk is gewijd aan de wijzigingen die met de Omgevingswet in het sturingsinstrumentarium optreden De monografie geeft voor het huidige recht en de Omgevingswet een schematische weergave van het totale sturingsinstrumentarium van Rijk en provincies Dit overzicht van de gereedschapskist voor de uitvoering van ruimtelijk beleid maakt het boek bij uitstek geschikt voor overheden en hun adviseurs De uitgebreide bespreking van omgevingsrechtelijke en organieke bevoegdheden geeft daarnaast inzicht in de verhouding centraal decentraal als zodanig zowel in het huidige als het toekomstige omgevingsrecht Tot slot kan de monografie voor wetgevingsjuristen interessante inzichten bevatten Het onderzoek inventariseert niet enkel sturingsinstrumenten maar beoordeelt deze ook in relatie tot de bevoegdheidssystematiek waarvan zij deel uitmaken Uit beginselen van rechtsstatelijkheid en decentralisatie wordt een toetsingskader afgeleid waarmee de onderlinge relatie tussen sturingsinstrumenten binnen de gereedschapskist en de verticale afbakening tussen bevoegdheden van Rijk provincies en gemeenten wordt beoordeeld

Sustainable Banking Jan Jaap Bouma, Marcel Jeucken, Leon Klinkers, 2017-09-08 This comprehensive addition to the debate on sustainable development has been produced in order to take a global pulse on how the financial services sector is responding to the growing challenge of shareholder and stakeholder expectations on social and environmental performance In the opinion of many commentators in this new book given the intermediary role banks play within economies their potential contribution toward sustainable development is enormous Indeed for banks the conclusion that corporate sustainability has become an investable concept that increases long term shareholder value is becoming difficult to deny To date banks have been relatively slow to examine their exposure to risk the environmental and social performance of their clients and the business opportunities of sustainable development the products and services they offer Not before time Sustainable Banking concludes that this is beginning to change with both risk and opportunity becoming established elements in banking policies towards environmental sustainability In addition banks have now begun to

take notice of and address their own environmental performance Through the use of case studies and detailed analysis the book examines the environmental policies of banks the importance of transparency and communication with their stakeholders environmental and ethical investment funds current practice by the providers of financial services with regard to environmental risk management and finally the key role of government NGOs and multilateral banks in delivering sustainability Sustainable banking has not however been achieved and nor will it be in the immediate future As globalisation proceeds apace Sustainable Banking argues that improvements are necessary in banks attitudes toward transparency and accountability with regard to their lending policies In addition in order to promote best practice the leading banks need to start measuring their customers environmental performance in order to persuade polluting clients that minimum compliance to regulations will no longer suffice The book finds many shining examples in the co operative mutual and social sectors for the big players to emulate Environmental and ethical considerations in such loan portfolios have proven to be profitable and best in class larger banks are now also reaping benefits The unprecedented scope of the book has attracted contributors from four continents including Deloitte Touche Rabobank The World Bank The European Bank for Reconstruction and Development The United Nations Environment Programme The World Business Council for Sustainable Development UBS Henderson Investors KPMG The World Resources Institute and SAM Sustainability

Environmental Integration Ton Bührs, 2009-04-09 The environmental challenges facing humankind can most effectively be met through environmental integration incorporating environmental considerations into everyday human thinking behavior and practices at both the individual and collective levels Increasingly people and organizations throughout the world are taking the environment into account but at the same time there is insufficient integration of attitudes policies and programs People and groups have different and often conflicting views and interpretations of what is desirable or required to protect the environment Environmental Integration looks at the ways that governments can play a crucial role in advancing promoting and shaping a singular integrated environmental policy

Smart Methods for Environmental Externalities Gert de Roo, Jelger Visser, 2016-04-01 In recent years Dutch environmental policy has undergone some pivotal changes the most significant of which have been decentralization and deregulation encouraging local communities to develop and deliver policies which are tailor made to their particular situation These changes have led to the development of some innovative practical instruments for aiding sustainable environmental spatial policy This book discusses these new methods for environmental externalities and their significance in the development and delivery of Dutch environmental policies particularly how they ensure that issues such as health and hygiene are introduced in the early stages of spatial planning processes This book highlights the most prominent and relevant of these innovative methods for environmental externalities as well as comparing them with some of the classic methods and analysing strengths and weaknesses It argues that having such a broad and varied choice of methods is the key to ensuring the impressive and groundbreaking Dutch creativity in environmental management In

conclusion the book extrapolates current trends in environmental policy expresses likely and possible developments in methods for environmental externalities and shows how such methods can contribute in our ongoing attempts to develop and deliver liveable pleasant and sustainable towns and cities

It is widely cited as an example of how a region of interconnected small cities can effectively compete globally by providing complementary functions which together match the power of large monocentric cities. The methods of strategic spatial planning, regional design and strategic projects that are said to underpin this polycentric metropolis are used as models for practitioners and students around the world. But is this high reputation deserved? Does the Randstad really function as a polycentric metropolis? The operation of the Randstad as a polycentric networked region is controversial both in terms of the actual strength of relations between its component parts and the value of promoting polycentricity in policy. What are the costs and benefits of a Randstad metropolis? Does polycentricity improve the performance of the region in economic, social and environmental terms? How has the polycentric metropolis evolved and what part is played by its delta location? Has spatial planning made a difference in the form and operation of the region today? How will this spatial configuration fare in the face of the climate crisis and need to create healthy cities and regions? Is there benefit in pursuing the idea of a polycentric metropolis in government policy and action and how? These questions are of critical interest within the Netherlands but experience in the Randstad offers valuable insights to many other complex urban regions around the world. This book will provide a critical analysis of the Randstad and lessons for strategic planning in other metropolitan regions.

Expedition Agroparks Peter J.A.M. Smeets, 2011-05-25. This book is the result of several years of expedition into the development of metropolitan FoodClusters. The author's fascination for the agricultural landscapes in and around metropolises led him to the conclusion that improving the efficiency of agriculture is the most effective way to safeguard the quality of such landscapes. The wasteful modes of production developed in the past 150 years have led to a serious decline in both the surface area and the quality of the highly valued landscapes. Closing the loops within the agricultural production system and increasing their productivity is therefore the best remedy to arrest this decline. After analysing the development of agriculture against the background of the urbanisation process in today's network society, the focus shifts to research by design on agroparks. These are spatial clusters of agrofuctions and the related economic activities. Agroparks bring together high productivity plant based and animal based production and processing along industrial lines combined with the input of high levels of knowledge and technology. The cycles of water, minerals and gases are skillfully closed and the use of fossil energy is minimised, particularly by the processing of various flows of waste products and by products. An agropark may therefore be seen as the application of industrial ecology in the agrosektor. The scientific aim of this book is to find answers to the questions of whether agroparks contribute to sustainable development in metropolises, how an agropark is developed and how it must be designed. Under examination are seven designs for agroparks which were created from 2002 onwards in the Netherlands, China and India.

Decentralization in Environmental Governance Christian Zuidema, 2016-10-04. Decentralization in Environmental Governance is a critical reflection on the dangers and risks of governance renewal, warning against one-sided criticism on traditional command and control approaches to planning. The book formulates the arguments that support when

and how governance renewable might be pursued but this attempt is not just meant for practitioners and scholars interested in governance renewal It is also useful for those interested in the challenge of navigating a plural landscape of diverse planning approaches which are each rooted in contrasting theoretical and philosophical positions The book develops a strategy for making argued choices between alternative planning approaches despite their theoretical and philosophical positions It does so by revitalizing the idea that we can contingently relate alternative planning approaches to the circumstances encountered It is an idea traced to contingency studies of the mid and late 20th century reinterpreted here within a planning landscape dominated by notions of uncertainty complexity and socially constructed knowledge This approach called Post contingency is both a theoretical investigation of arguments for navigating the theoretical plurality we face and an empirical study into renewing environmental governance Next to its theoretical ambitions Decentralization in Environmental Governance is practical in offering a constructive critique on current processes of governance renewal in European environmental governance
