Forest Mensuration Herman Haupt Chapman, 1921 Economic Evaluations in Exploration Friedrich-Wilhelm Wellmer, Manfred Dalheimer, Markus Wagner, 2007-11-29 This textbook now in its second English edition is originally a translation of the German textbook *Rechnen für Lagerstättenkundler und Rohstoffwirtschaftler Teil 1* also translated into the Chinese and Russian languages Compared to the previous English and German editions the chapters have been updated with new examples and in many cases amended The textbook is intended for the economic geologist who deals with the evaluation of deposits at an early stage of development Once an exploration project has reached the feasibility stage the exact calculations that are necessary for a comprehensive technical and economic assessment will be performed by a team of geologists mining engineers metallurgists and economists In the early stages of exploration however any evaluator of deposits must be able to cover the whole spectrum himself Since only order of magnitude parameters are available at this early stage the calculations can only yield order of magnitude results Precise calculations would even be misleading since the evaluation does not yet aim at accurate economic assessment but at making the right decision should the investigation be abandoned or should it be continued at higher costs and with more detailed methods

Radiation Protection and Dosimetry Michael G. Stabin, 2007-09-12 This text is meant to serve as the basis for a two course series in the study of radiation protection a health physics The first course would be an introduction to and fast paced overview of the subject For some this is the only course in radiation protection that they will take and thus all material must be covered in a fairly superficial and rapid fashion The second course is a more in depth and applied study of radiation protection bringing in current materials from the literature a detailed study of regulations practice with real world dose and shielding calculations and perhaps application in a semester long student project assigned by the instructor Several chapters include an additional section of suggested readings and other resources that can be used by the instructor to build such detailed investigations in a second course of this nature In the first course the chapter may be basically studied with reference to the idea that a much richer literature base exists than can be covered in a broad overview of radiation protection Through exploration of this literature

base and other similar materials that the instructor may be aware of that are not specifically cited this second more in depth course may be developed A routine part of any good health physics program is a complete course in radiation detection and measurement My brief overview chapter here cannot provide the depth needed for this subject [Thermal Management for LED Applications](#) Clemens J.M.
