The Changing American Countryside Emery N. Castle, 1995 The literature on rural America to the extent that it exists has largely been written by urban based scholars perpetuating out of date notions and stereotypes or by those who see little difference between rural and agricultural concerns As a result the real rural America remains much misunderstood neglected or ignored by scholars and policymakers alike In response Emery Castle offers *The Changing American Countryside* a volume that will forever change how we look at this important subject Castle brings together the writings of eminent scholars from several disciplines and varying backgrounds to take a fresh and comprehensive look at the forgotten hinterlands These authors examine the role of non metropolitan people and places in the economic life of our nation and cover such diverse issues as poverty industry the environment education family social problems ethnicity race religion gender government public policy and regional diversity The authors are especially effective in demonstrating why rural America is so much more than just agriculture It is in fact highly diverse complex and interdependent with urban America and the international market place Most major rural problems they contend simply cannot be effectively addressed in isolation from their urban and international connections To do so is misguided and even hazardous when one fourth of our population and ninety seven per cent of our land area is rural Together these writings not only provide a new and more realistic view of rural life and public policy but also suggest how the field of rural studies can greatly enrich our understanding of national life **Social**

Pumar, Ross Koppel, 2010 This book shows students the steps involved in the research process the various strategies for conducting a valid social inquiry and most importantly the persuasiveness and elegance of reliable social research It highlights the link between academic research and the real world Included are carefully chosen examples of each of the major methodological techniques survey interviews fieldwork observations experiments content analysis secondary analysis and program evaluation Also included are selections on sampling strategies research ethics and both qualitative and quantitative data analysis *Struggling for Health in the City* Brigit Obrist, 2006 For international experts health is a comprehensive concept closely linked to bodily material spiritual and social well being But what does health mean to women living in a poor neighborhood of an African city Women in Dar es Salaam see health as primarily related to livelihood hygiene and care To stay healthy one has to fulfill basic needs for food water and shelter to keep the body and home clean and to take good care of the family Since the state and newly privatized services hardly reach them and husbands often fail in their role as breadwinners women bear a growing burden in daily health practice They become increasingly vulnerable unless they manage to create a new balance by improving their knowledge becoming economically more independent and raising support within the household in social networks and organizations By shifting the focus from illness to local meanings of health and vulnerability anthropology can make a unique contribution to the rapidly expanding field of urban health research Such an actor centered approach provides fascinating insights and fosters innovative theoretical debates for both scholars and practitioners With regard to medical anthropology this study opens new lines of inquiry which may eventually lead to an anthropology of health
