Sex Determination In Mouse Man:

Sex Itself Sarah S. Richardson, 2013-12-13 Human genomes are 99.9 percent identical with one prominent exception. Instead of a matching pair of X chromosomes, men carry a single X coupled with a tiny chromosome called the Y. Tracking the emergence of a new and distinctive way of thinking about sex represented by the unalterable, simple and visually compelling binary of the X and Y chromosomes, *Sex Itself* examines the interaction between cultural gender norms and genetic theories of sex from the beginning of the twentieth century to the present postgenomic age. Using methods from history, philosophy and gender studies of science, Sarah S. Richardson uncovers how gender has helped to shape the research practices, questions asked, theories and models and descriptive language used in sex chromosome research. From the earliest theories of chromosomal sex determination to the mid-century hypothesis of the aggressive XYY supermale to the debate about Y chromosome degeneration to the recent claim that male and female genomes are more different than those of humans and chimpanzees, Richardson shows how cultural gender conceptions influence the genetic science of sex. Richardson shows how sexual science of the past continues to resonate in ways both subtle and explicit in contemporary research on the genetics of sex and gender. With the completion of the Human Genome Project, genes and chromosomes are moving to the center of the biology of sex. *Sex Itself* offers a compelling argument for the importance of ongoing critical dialogue on how cultural conceptions of gender operate within the science of sex.

Sex Determination, Differentiation and Intersexuality in Placental Mammals R. H. F. Hunter, 1995-03-09 How do males become male and females become female? And what are the consequences if the decision is not incisive? Drawing upon interests in animal genetics and molecular biology, the author endeavours to answer these difficult yet fascinating questions. Originally published in 1995, this book describes the genetic determination of sex and examines how sexual organs are differentiated. Using examples of intersexuality, chimaeras and asymmetries, the book describes the underlying molecular basis of sex determination and sexual differentiation and focuses on the critical role of the rate of embryonic development in these vital processes. Male precocity is a recurrent theme, as is the involvement of Sertoli cells and their secretion of anti-Müllerian hormone. An invaluable book for reproductive physiologists, geneticists and developmental biologists whose interests may extend from animal science through veterinary medicine to human clinical medicine.

Cell and Molecular Biology of the Testis Claude Desjardins, Larry L. Ewing, 1993 This book is a comprehensive, multi-authored work on the structure and function of the mammalian testis. The approach emphasizes gene expression, translation and production of specific gene products and the cellular and molecular regulation of these fundamental processes. Rather than provide a global survey of all aspects of male reproduction, this book stresses specific mechanisms that underscore the structure and function of the testis. It explains old and new concepts from a cellular and molecular perspective. This novel approach allows the authors to forge links between cell and molecular biology and well-established aspects of spermatogenesis and steroidogenesis. The result is a well-focused, comprehensive and synthetic

The Genetical Theory of Natural Selection by R A Fisher 1930 dictated that sexual dimorphisms may depend upon a single medelian factor This could be true for some species but his suggestion could not take off the ground as gender in *Drosophila* is determined by the number of X chromosomes Technical advances in molecular biology have revived the initial thinking of Fisher and dictate that TDF or SRY genes in humans or Tdy in mice are sex determining genes The fortuitous findings of XX males and XY female which are generally termed sex reversal phenomenon are quite bewildering traits that have caused much amazement concerning the pairing mechanisms of the pseudoautosomal regions of human X and Y chromosomes at meiosis These findings have opened new avenues to explore further the genetic basis of sex determination at the single gene level The aim of the fourth volume titled *Genetics of Sex Determination* is to reflect on the latest advances and future investigative directions encompassing 10 chapters Commissioned several distinguished scientists all pre eminent authorities in each field to shed their thoughts concisely but epitomise their chapters with an extended bibliography Obviously during the past 60 years the meteoric advances are voluminous and to cover every account of genes chromosomes and sex in a single volume format would be a herculean task Therefore a few specific topics are chosen which may be of great interest to scientists and clinicians The seasoned scientists who love to inquire about the role of genes in sex determination should find the original work of these notable contributors very enlightening This volume is intended for advanced students who want to keep abreast as well as for those who indulge in the search for genes of sex determination Twentieth Century Mouse Genetics Robert P. Why Men Won't Ask for Directions Richard C. Francis,2013-12-03 Much of the evolutionary biology that has grabbed headlines in recent years has sprung from the efforts of sociobiologists and evolutionary psychologists to explain sexual features and behavior even differences between how men and women think as evolutionary adaptations They have looked to the forces of natural selection to explain everything from the mimicry of male mockingbirds to female orgasms among humans In this controversial book Richard Francis argues that the utility of this approach is greatly exaggerated He proposes instead a powerful alternative rooted in the latest findings in evolutionary biology as well as research on the workings of our brains genes and hormones Exploring various sexual phenomena Francis exposes fundamental defects in sociobiology and evolutionary psychology which he traces to their misguided emphasis on why questions at the expense of how questions Francis contends that this preoccupation with why questions such as Why won t men ask for directions results in a paranoiac mindset and distorted evolutionary explanations His alternative framework entails a broader conception of what constitutes an evolutionary explanation one in which both evolutionary history as embodied in the tree of life and developmental processes are brought to the foreground This alternative framework is also better grounded in basic biology Deeply learned consistently persuasive and always engaging this book is a welcome antidote to simplistic sociobiological exegeses of animal and human behavior **Biomedical Index to PHS-supported Research** ,1993 **Reproductive Immunology** Satish Kumar Gupta,2012-12-06 Reproductive Immunology is a compilation of research articles presented during the VII International Congress of Reproductive Immunology which was held in New Delhi India on 27 30 October 1998 The articles

pertain to the following six major themes Molecular and Immunological Aspects of Sperm Egg Interaction Embryonic Endometrial Cross Talk Immunobiology of Pregnancy Autoantibodies and Infertility Immunocontraception Mucosal Immunology and Reproductive Tract Infections The first section deals with our current understanding of various steps involved in fertilization The functional significance of sperm surface mannosidase and glutathione S transferases to bind zona pellucida is described The role of zona pellucida glycoproteins in the binding of sperm induction of acrosome reactions and avoidance of polyspermy is discussed In the second section the role of various cytokines growth factors and immunomodulatory agents in implantation of embryos is described In the field of reproductive immunology one of the major issues is to explore the successful gestation of the histoincompatible fetus in the uterus of an immunologically competent mother The Proceedings presents the issues of paternal antigens at the fetomaternal interface and shows that Th2 type of immunity is involved in normal successful conception The role of membrane bound and soluble HLA G in protecting the fetus from the lytic activities of maternal uterine and peripheral blood natural killer NK cells is also presented Nature's experiments suggest that antibodies against sperm specific antigens are responsible for infertility in some women The possibility that an immunogenetic background contributes to production of sperm immobilizing antibodies in infertile women is discussed in the section on autoantibodies and infertility The Proceedings presents the issue of Th1 type cytokines in inducing recurrent spontaneous abortions of unexplained etiology The roles of 2 glycoprotein 1 2 GP1 dependent anticardiolipin antibody lupus anticoagulant antiphospholipids anti thyroid antibody and anti nuclear antibody in miscarriages are also described The rising global human population particularly in the developing countries has driven the need for new and safer methods of contraception Fertility regulation by vaccines is thus an interesting proposition The section on contraceptive vaccines discusses the latest advances in this area and describes the current status of vaccines based on hCG sperm antigens zona pellucida glycoproteins and riboflavin carrier proteins The issues of mucosal immunity and strategies for enhancing local genital immune responses to combat HIV infection is discussed The role of inflammatory and related cytokines in chorioamnionitis is described The contents of this Proceedings describes various facets of reproductive immunology which will help us to design strategies to combat genital infections and miscarriages caused by immunological etiology Descriptions of the molecular basis of gamete recognition implantation and survival of the allogenic fetus will help in designing strategies for overcoming infertility and also new contraceptive approaches The Proceedings will be useful to researchers and clinicians involved in basic or applied research in the disciplines of reproductive biology reproductive immunology and obstetrics and gynecology Gendered Innovations in Science and Engineering Londa L.
