Shhhh It Lives:

The Imaginary Lives of James Poneke Tina Makereti, 2019-12-01 James Poneke is a young Maori orphan raised by missionaries with a burning desire to travel and explore the world. When an English artist on a tour of New Zealand invites James to return home with him, the boy eagerly accepts and agrees to become a living exhibit at the artist's London show. By day, James dresses in full tribal outfit, being stared at, prodded, and examined by paying visitors. By night, he is free to explore the city, but anything can happen to a young New Zealander on the savage streets of Victorian London, and James is unprepared for the wonders, dangers, and unearthed secrets that await. *The Imaginary Lives of James Poneke* is an unforgettable work of historical fiction in the spirit of Sarah Waters and Sarah Perry. **Shh... It's Loud in Here** Agata Todd, The world is quiet but your mind is not so much. In *Shh... It's Loud in Here*, Agata Todd captures the inner noise we carry with us: the spiralling thoughts, the second-guessing, the relentless commentary that never seems to switch off. With honesty, warmth, and her trademark humour, she explores what it means to live with a loud brain in a world that often mistakes silence for peace. This is a book for anyone who's ever struggled to sleep, to switch off, or to just relax. Tender and relatable, it's a reminder that even in the mental clatter, there's space to breathe and that you're not the only one trying to find quiet in the noise. *Unsung Verses of Life* T. E. Vera, 2011 **Calculus for the Life Sciences: A Modeling Approach** James L. Cornette, Ralph A. Ackerman, 2019-05-25 *Calculus for the Life Sciences* is an entire reimagining of the standard calculus sequence with the needs of life science students as the fundamental organizing principle. Those needs, according to the National Academy of Science, include the mathematical concepts of change, modeling equilibria, and stability; structure of a system; interactions among components; data and measurement; visualization; and algorithms. This book addresses, in a deep and significant way, every concept on that list. The book begins with a primer on modeling in the biological realm, and biological modeling is the theme and frame for the entire book. The authors build models of bacterial growth, light penetration through a column of water, and dynamics of a colony of mold in the first few pages. In each case, there is actual data that needs fitting. In the case of the mold colony, that data is a set of photographs of the colony growing on a ruled sheet of graph paper, and the students need to make their own approximations. Fundamental questions about the nature of mathematical modeling—trying to approximate a real-world phenomenon with an equation—are all laid out for the students to wrestle with. The authors have produced a beautifully written introduction to the uses of mathematics in the life sciences. The exposition is crystalline; the problems are overwhelmingly from biology and are interesting, rich, and the emphasis on modeling is pervasive.
