Physics of Collisionless Shocks André Balogh, Rudolf A. Treumann, 2013-01-04 The present book provides a contemporary systematic treatment of shock waves in high temperature collisionless plasmas as are encountered in near Earth space and in Astrophysics It consists of two parts Part I develops the complete theory of shocks in dilute hot plasmas under the assumption of absence of collisions among the charged particles when the interaction is mediated solely by the self consistent electromagnetic fields Such shocks are naturally magnetised implying that the magnetic field plays an important role in their evolution and dynamics This part treats subcritical shocks which dissipate flow energy by generating anomalous resistance or viscosity The main emphasis is however on super critical shocks where the anomalous dissipation is insufficient to retard the upstream flow These shocks depending on the direction of the upstream magnetic field are distinguished as quasi perpendicular and quasi parallel shocks which exhibit different behaviours reflecting particles back upstream and generating high electromagnetic wave intensities Particle acceleration and turbulence at such shocks become possible and important Part II treats planetary bow shocks and the famous Heliospheric Termination shock as examples of two applications of the theory developed in part I

Collisionless Shocks in the Heliosphere Robert G. Stone, Bruce T. Tsurutani, 1985 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 35 Violent expansions of the solar corona cause transient shock waves which propagate outward from the sun at hundreds to thousands of kilometers per second simple solar wind velocity gradients at the surface of the sun lead to high speed streams overtaking slower streams forming corotating shocks and steady state supermagnetosonic solar wind flow past objects such as the planets lead to standing bow shocks However the solar wind plasma is so hot and tenuous that charged particle Coulomb collisions produce negligible thermalization or dissipation on scale sizes less than 0.1 AU The irreversible plasma heating by these shocks is accomplished by wave particle interactions driven by plasma instabilities Hence these shocks are described as collisionless

Variability of Blazars E. VALTAOJA (Ed), Mauri Valtonen, 1992 Blazars also known as BL Lac objects first discovered in 1978 are unusually

energetic objects in the extragalactic universe About 200 are known or suspected They are radio sources with highly variable optical and radio emission as well as high polarisation and their optical spectra normally have no distinguishable features It is generally accepted that they belong to that class of galaxies with active galactic nuclei which are presumed to be driven by infall of matter to a supermassive black hole In this book researchers give a complete summary of the observations of blazars and the theoretical interpretation A comprehensive listing of confirmed and candidate objects is included Mechanisms in which the variability can arise from shocks and relativistic jets are discussed There are at least four different answers given to the question what is a blazar This book is a complete overview of the violent activity observed in these extreme active galactic nuclei

Collisionless Shocks in Space Plasmas David Burgess, Manfred Scholer, 2015-07-30 Shock waves are an important feature of solar system plasmas from the solar corona out to the edge of the heliosphere This engaging introduction to collisionless shocks in space plasmas presents a comprehensive review of the physics governing different types of shocks and processes of particle acceleration from fundamental principles to current research Motivated by observations of planetary bow shocks interplanetary shocks and the solar wind termination shock it emphasises the physical theory underlying these shock waves Readers will develop an understanding of the complex interplay between particle dynamics and the electric and magnetic fields that explains the observations of in situ spacecraft Written by renowned experts in the field this up to date text is the ideal companion for both graduate students new to heliospheric physics and researchers in astrophysics who wish to apply the lessons of solar system shocks to different astrophysical environments
