**Transgenic Plants** Leandro Peña, 2008-02-05 The aim of Transgenic Plants Methods and Protocols is to provide a source of information to guide the reader through a wide range of frequently used broadly applicable and easily reproducible techniques involved in the generation of transgenic plants Its step by step approach covers a series of methods for genetically transforming plant cells and tissues and for recovering whole transgenic plants from them The volume then moves on to the use of selectable and reporter markers positive selection marker elimination after recovery of transgenic plants and the analysis of transgene integration expression and localization in the plant genome Although contributors usually refer to model plants in most chapters the protocols described herein should be widely applicable to many plant species The last two sections are devoted to methods of risk assessment and to exploring the current and future applications of transgenic technology in agriculture and its social implications in a case study Transgenic Plants Methods and Protocols is divided into six major sections plus an introduction comprising 27 chapters Part I the Introduction is a review of the past present and perspectives of the transgenic plants from the discovery of *Agrobacterium tumefaciens* as a feasible transformation vector to its use as a tool to study gene expression and function and the current and possible future applications of this technology in agriculture

Intellectual Property Thomas Cottier,Petros Constantinos Mavroidis,Marion Panizzon,2010-04-23 The incorporation of intellectual property protection into the WTO international trading system has been a milestone in international economic law and has added a new dimension to trade regulation new rights and obligations and new challenges alike The contributors leading scholars and practitioners in the field provide insights into the legal relationship of the TRIPs Agreement to the GATT 94 and the GATS The book widens the debate with a thorough discussion on pending and unresolved relations of TRIPs the WTO UPOV the Convention on Biodiversity and Farmers Rights contained in the FAO International Undertaking and efforts of the World Bank GCIAR system including IPGRI What will be the impact of TRIPs on ownership of plant genetic resources Largely a victory for OECD countries the present state of intellectual property rights has important implications for developing countries The incorporation of intellectual property rights into the WTO system will eventually change the

relationship of trade competition and intellectual property It will equally have to assist in providing equitable sharing of benefits in the use of plant genetic resources All of these issues are essential for the revision of exclusions from patenting in TRIPs This volume offers insights into how this difficult task could and should be approached in a balanced manner and will be essential reading for economists and trade and intellectual property lawyers interested in the subject Moreover the volume will be relevant to agricultural economists as it addresses complex problems in the interstices of trade intellectual property plant genetic resources and sustainable development Thomas Cottier is Professor of European and International Economic Law University of Bern and Managing Director World Trade Institute University of Bern Petros C Mavroidis is Professor of Law University of Neuchâtel He formerly worked in the Legal Affairs Division of the World Trade Organization Marion Panizzon is Research Fellow University of Bern Simon Lacey is Research Fellow University of Bern
