relationship between law and China's economic development. Serious inquiries and candid opinions of the contributors have made for stimulating discussion and debate in many controversial areas. This book is likely to result in further research into factors affecting China's economic development, political change, and China's interaction with the international community. The book explores the development of the Chinese legal system from both China's historical perspective, taking into account the specific political and socioeconomic factors that are shaping Chinese law, and from a comparative perspective, exploring the interaction between China and the rest of the world. The book brings together key international scholars of Chinese law and economics, including Hualing Fu, Roda Mushkat, Randall Peerenboom, Zhigang Tao, and Frank Upham. The first part of the book focuses on the linkages between the formal law and China's economic development, looking at Chinese courts, economic institutions, and firm behaviour, as well as contract enforcement and property rights. Part two deals with issues of law, human rights, and social justice as they relate to economic and human development. Taken as a whole, the book offers a unique discourse on the interaction between law and economic and human development in China.

Mathematical Principles of Decision Making (Principia Mathematica Decernendi) Thomas L. Saaty, In this book Thomas Saaty summarizes his Analytic Hierarchy Process (AHP) theory for measuring intangible factors through paired comparisons using judgments from which priorities are derived that give the relative dominance of these factors. The important concepts of the AHP and its generalization to structures with dependence and feedback, the Analytic Network Process (ANP), are presented in an elegant, compact way, and new extensions of the theory to complex decisions involving benefits, opportunities, costs, and risks are presented. Applications to resource allocation and conflict resolution are included. The generalization to continuous comparisons is covered. The Encyclicon, three volumes, now available, is an encyclopedia of applications that is a useful accompaniment to the Principles of Mathematical Decision Making, containing examples of practical decisions.
