## **New Variational Methods In Flight Dynam:**

**New Variational Methods in Flight Dynamics** Vadim Fedorovich Krotov, 1959      **New Variational Methods in Flight Dynamics** VADIM FEDOROVICH. KROTOV, 1969      **Global Methods in Optimal Control Theory** Vadim Krotov, 1995-10-13 This work describes all basic equations and inequalities that form the necessary and sufficient optimality conditions of variational calculus and the theory of optimal control Subjects addressed include developments in the investigation of optimality conditions new classes of solutions analytical and computation methods and applications

**Optimization of Dynamical Systems with Impulse Controls and Shocks** Boris Miller, Evgeny Rubinovich, 2024-09-19 This text explores the state of the art in the rapidly developing theory of impulse control and introduces the theory of singular space time transformations a new method for studying shock mechanical systems Two approaches in the theory of impulse control are presented The first more traditional approach defines the impulsive action as a discontinuity of phase coordinates depending on the current time the state preceding the action and its magnitude The second requires the use of modern methods for describing dynamical systems differential equations with measures The impulse is treated as an idealization of a very short action of high magnitude which produces an almost abrupt change of phase coordinates The relation between these two approaches is also discussed and several applications both traditional and emerging are considered This text is intended for graduate students and researchers in control engineering and optimal control theory for dynamical systems Readers are assumed to be familiar with the theory of ODEs optimal control and functional analysis though an appendix is included that covers many of the necessary mathematical concepts      New Variational Methods in Flight Dynamics Georgii Vladimirovich Logvinovich, Vadim Fedorovich Krotov, 1971      **Optimal Trajectories in**

**Atmospheric Flight** Nguyen Vinh, 2012-12-02 Optimal Trajectories in Atmospheric Flight deals with the optimization of trajectories in atmospheric flight The book begins with a simple treatment of functional optimization followed by a discussion of switching theory It then presents the derivation of the general equations of motion along with the basic knowledge in aerodynamics and propulsion necessary for the analysis of atmospheric flight trajectories It goes on to the study of optimal trajectories by providing the general properties of the optimal aerodynamic controls and the integrals of motion This is followed by discussions of high subsonic and supersonic flight and approximation techniques to reduce the order of the problem for a fast computation of the optimal trajectory The final chapters present analyses of optimal reentry trajectories and orbital maneuvers This book is intended as a reference text for scientists and engineers wanting to get into the subject of optimal trajectories in atmospheric flight If used for teaching purposes the book is written in a self contained way so that a selective use of the material is at the discretion of the lecturer The first 11 chapters are sufficient for a one semester course with emphasis on optimal maneuvers of high performance aircraft      *New Variational Methods in Flight Dynamics* Vadim Fedorovich Krotov, 1971      *NASA Technical Translation* United States. **Advances in Nonlinear Dynamics and Control: A Report from Russia** Alexander B. Kurzhanski, 2012-12-06 The purpose of this volume is to present a coherent collection of overviews of recent Russian research in Control Theory and Nonlinear Dynamics written by active investigators in these fields It is needless to say that the contribution of the scientists of the former Soviet Union to the development of nonlinear dynamics and control was significant and that their scientific schools and research community have highly evolved points of view accents and depth which complemented enhanced and sometimes inspired research directions in the West With scientific exchange strongly increasing there is still a considerable number of Eastern publications unknown to the Western community We have therefore encouraged the authors to produce extended bibliographies in their papers The particular emphasis of this volume is on the treatment of uncertain systems in a deterministic setting a field highly developed in the former Soviet Union and actively investigated in the West The topics are concentrated around the three main branches of uncertain dynamics which are the theory of Differential Games the set membership approach to Evolution Estimation and Control and the theory of Robust Stabilization The application of these techniques to nonlinear systems as well as the global optimization of the latter are also among the issues treated in this volume     Scientific and Technical Aerospace Reports ,
