E H Mikhail,1976-06-01 **Acoustics and Sound Insulation** Eckard Mommertz,2012-12-17 Acoustics and protection
against noise do not perhaps number among the primary parameters that normally influence the design of a building
Nevertheless at the very latest when the lecturer in the seminar room cannot be heard when the noise level in an open plan
office reaches unbearable levels or when a neighbor's noise deprives you of sleep it becomes clear just how essential acoustic
can be to everyday well being it is not just concert halls or the amphitheaters of antiquity that call for acoustic quality rather
every building indeed every room has an acoustic dimension that changes according to the nature of its particular
requirements This practice oriented volume provides expert planners and architects but also interested developers with
practical knowledge on the subject of acoustics in high rise architecture beginning with standards on methods of planning
and prognosis and moving on to the areas of acoustics of rooms and architecture and noise protection in urban planning
Typologically organized chapters comment on proper approaches to the subject with examples of different types of building
such as residential and office buildings schools kindergartens lecture halls event spaces and so on because appropriate
acoustic conditions make an essential contribution to the success of a project Strategic Decision Making in the Arts Gary
