Origins Of Life From The Birth Of Life To The Origin Of Language:

The Origins of Life John Maynard Smith, Eörs Szathmáry, During evolution there have been a number of major transitions in the way in which information is passed between generations This book describes these transitions and the way they came about and is based on The Major Transitions in Evolution **The Origins of Life** John Maynard Smith, Eörs Szathmáry, 2000 Presents for the general readership the novel picture of evolution proposed in the 1995 book The major transitions in evolution Origins of Life, 2000-03-16 Living organisms are astonishingly complex And the more we know about them their biochemistry their anatomy their behaviour the more astonishing are the detailed adaptations that we discover How could this complexity have arisen Most of us are familiar with Darwin's theory of evolution by natural selection The idea behind it being that in nature those individuals best able to survive and reproduce will transmit the characteristics that enabled them to do so to their offspring leading to the evolution of traits beneficial to the organism Although Darwin's idea is simple perhaps because it is so simple it is hard to believe that it is able to explain the complexity of the living world We can breed cows that produce more milk compared with earlier generations say but we cannot breed pigs that fly or horses that can talk there would be no promising variants that we could select and breed from Where then does the variation come from that has made possible the evolution of ever increasing complexity in the wonderfully adapted organisms we see around us In answering this central question John Maynard Smith and Eörs Szathmáry present for a general readership a novel picture of evolution Their basic idea is that evolution depends on changes in the information that is passed between generations and that there have been a number of major transitions in the way that information is stored and transmitted These transitions include the appearance of the first replicating molecules the origin of life itself the origin of cells reproduction by sexual means the appearance of multicellular plants and animals the emergence of cooperation and of animal societies and the unique language ability of humans Here then is an accessible account of contemporary biology on the grandest scale from the birth of life to the origin of language Containing many original ideas and covering many of the most fundamental ideas in biology this important and deeply interesting book will appeal both to readers with little prior knowledge of science and to biologists themselves WHERE WHEN AND HOW ANCESTRAL (LUCA) TO ALL LIFE ORIGINATED Jagjit Singh Rawat, 2021-12-06 The book is all about the living beings All living beings including humans have originated and evolved from the Last Universal Common Ancestor LUCA that was possible as a result of spontaneous step by step chemical origin in about 3 750 billion years ago from the elements consisting of life body such as nitrogen bases adenine thiamine cytosine guanine and uracil which are made up off the elements C H O N and ribose sugar This life originated in the sediments of the palaeo floodplains at the palaeo mouths of fresh water flows rivers on the Hadean surface in the Archaean Eon This was a global phenomenon The life on the rocky planet like our Earth was possible because of existence of fresh water bodies over minerals metals and clay deposits which rested on Hadean surface and active geological processes

and active environments The book also makes an attempt to explain as to how do the simple elements like C H O N S and P first change to simple chemistry H_2O NH_3 followed by CH_4 HCN and monomers monosaccharides amino acids glycerol s fatty acids nucleotides and polymers carbohydrates proteins lipids and nucleic acids There was not much development for about 3210 million years from 3750 million years to 540 million years and suddenly changed jumped to complex life forms in about 541 million years ago Here the life originated and evolved without head and heart from 3750 million years ago to 522 million years ago i e for about 3228 million years The head was originated and evolved in about 521million years ago However consciousness emerged along with bonding of carbon with hydrogen and other elements which were finally converted into nucleosides having nitrogenous base and ribose sugar The gravity and gravitational force intertwined with electromagnetic force were the reason there were bonding of carbon and hydrogen and other elements to originate and evolve LUCA which stayed away from thermodynamic equilibrium

Demographic and Socioeconomic Basis of Ethnolinguistics Jacob S. Siegel, 2017-10-25 This book presents a description and analysis of sociolinguistics written from a demographer s perspective It synthesizes the data on the materials methods and issues of this interdisciplinary field pulling together the scattered materials published in this area into a coherent whole Drawing on a wide range of sciences in addition to demography and sociolinguistics including sociology anthropology statistics psychology neuroscience and public policy the book treats theoretical and applied issues links methods and substantive findings covers both national and international materials and provides prehistorical historical and contemporary illustrations The book treats the theoretical issue of how the language we use develops socially on a base of linguistic genetic capacity and the practical issue of how the intervention of the state and public figures may profoundly alter the natural evolution of the language As such this book will appeal to a wide range of users from students to teachers and practitioners of social demography sociolinguistics cultural anthropology and particularly to those social scientists interested in ethnic studies and human migration

Advances in Artificial Life Jozef Kelemen, Petr Sosik, 2003-06-30 Why is the question of the difference between living and non living matter tellectually so attractive to the man of the West Where are our dreams about our own ability to understand this difference and to overcome it using the rmly established technologies rooted Where are for instance the cultural roots of the enterprises covered nowadays by the discipline of Arti cial Life Cont plating such questions one of us has recognized 6 the existence of the eternal dream of the man of the West expressed for example in the Old Testament as follows the Lord God formed the man from the dust of the ground and breathed into his nostrils the breath of life and the man became a living being Genesis 2 7 This is the dream about the workmanlike act of the creation of Adam from clay about the creation of life from something non living and the con dence in the magic power of technologies How has this dream developed and been converted into a reality and how does it determine our present day activities in science and technology What is this con dence rooted in Then God said Let us make man in our image Genesis 1 26 Man believes in his own ability to repeat the Creator s acts to change ideas into real

things because he believes he is godlike This con dence is using the trendy Dawkins term perhaps the most important cultural meme of the West

How Molecular Forces and Rotating Planets Create Life Jan Spitzer,2021-02-09 A reconceptualization of origins research that exploits a modern understanding of non covalent molecular forces that stabilize living prokaryotic cells Scientific research into the origins of life remains exploratory and speculative Science has no definitive answer to the biggest questions What is life and How did life begin on earth In this book Jan Spitzer reconceptualizes origins research by exploiting a modern understanding of non covalent molecular forces and covalent bond formation a physicochemical approach propounded originally by Linus Pauling and Max Delbr ck Spitzer develops the Pauling Delbr ck premise as a physicochemical jigsaw puzzle that identifies key stages in life s emergence from the formation of first oceans tidal sediments and proto biofilms to progenotes proto cells and the first cellular organisms

The Nature of Life Mark A. Bedau,Carol E.
