BRST Symmetry and de Rham Cohomology Soon-Tae Hong,2024-04-24 This book provides an advanced introduction to extended theories of quantum field theory and algebraic topology including Hamiltonian quantization associated with some geometrical constraints symplectic embedding and Hamilton Jacobi quantization and Becchi Rouet Stora Tyutin BRST symmetry as well as de Rham cohomology This extended new edition offers a multifaced insight into phenomenology of particles such as baryons and photons in terms of extended objects In particular in the second edition the baryons are described in hypersphere soliton model and the photon properties are additionally included in stringy photon model and in Dirac type relativistic quantum mechanics for a photon It offers a critical overview of the research in this area and unifies the existing literatures employing a consistent notation Although the results presented apply in principle to all alternative quantization schemes special emphasis is placed on the BRST quantization and its de Rham cohomology group which contribute to a deep understanding of constrained physical theories The book describes how solitons and other models subject to constraints include rigorous treatments of the geometrical constraints which affect the predictions themselves The book is intended for use by any graduate level student with quantum field and relativity theories and it also serves as a useful reference for those working in the field An extensive bibliography guides the reader toward the source literature on particular topics **Computational Prediction of Protein Complexes from Protein Interaction Networks** Sriganesh

Srihari,Chern Han Yong,Limsoon Wong,2017-05-30 Complexes of physically interacting proteins constitute fundamental functional units that drive almost all biological processes within cells A faithful reconstruction of the entire set of protein complexes the complexosome is therefore important not only to understand the composition of complexes but also the higher level functional organization within cells Advances over the last several years particularly through the use of high throughput

proteomics techniques have made it possible to map substantial fractions of protein interactions the interactomes from model organisms including *Arabidopsis thaliana* a flowering plant *Caenorhabditis elegans* a nematode *Drosophila melanogaster* fruit fly and *Saccharomyces cerevisiae* budding yeast These interaction datasets have enabled systematic inquiry into the identification and study of protein complexes from organisms Computational methods have played a significant role in this context by contributing accurate efficient and exhaustive ways to analyze the enormous amounts of data These methods have helped to compensate for some of the limitations in experimental datasets including the presence of biological and technical noise and the relative paucity of credible interactions In this book we systematically walk through computational methods devised to date approximately between 2000 and 2016 for identifying protein complexes from the network of protein interactions the protein protein interaction PPI network We present a detailed taxonomy of these methods and comprehensively evaluate them for protein complex identification across a variety of scenarios including the absence of many true interactions and the presence of false positive interactions noise in PPI networks Based on this evaluation we highlight challenges faced by the methods for instance in identifying sparse sub or small complexes and in discerning overlapping complexes and reveal how a combination of strategies is necessary to accurately reconstruct the entire complexosome

Advances in Materials and Pavement Performance Prediction II K. Anupam, A.T. Papagiannakis, A. Bhasin, D. Little, 2020-12-08 Inspired from the legacy of the previous four 3DFEM conferences held in Delft and Athens as well as the successful 2018 AM3P conference held in Doha the 2020 AM3P conference continues the pavement mechanics theme including pavement models experimental methods to estimate model parameters and their implementation in predicting pavement performance The AM3P conference is organized by the Standing International Advisory Committee SIAC at the time of this publication chaired by Professors Tom Scarpas Eyad Masad and Amit Bhasin *Advances in Materials and Pavement Performance Prediction II* includes over 111 papers presented at the 2020 AM3P Conference The technical topics covered include rigid pavements pavement geotechnics

statistical and data tools in pavement engineering pavement structures asphalt mixtures asphalt binders The book will be invaluable to academics and engineers involved or interested in pavement engineering pavement models experimental methods to estimate model parameters and their implementation in predicting pavement performance THE NATURE OF THE CORPORATION: A TALE OF ECONOMIC COMPLEXITY CĂLIN VÂLSAN,2020-01-01 This book presents a bold vision of the modern corporation one that some might find unsettling for it calls into question the real implications of human agency and the very notion of economic efficiency *Marine resources and legal-political arrangements for their development* United States. Commission on Marine Science, Engineering, and Resources,1969 *The Problem-drinking Drug Addict* National Institute on Drug Abuse,1978 **Earthquakes and the Urban Environment** G. Lennis Berlin,2018-01-18 This monograph attempts to amalgamate recent research input comprising the vivifying components or urban seismology at a level useful to those having an interest in the earthquake and its effects upon an urban environment However because some of those interested in the earthquake urban problem may not have a strong background in the physical sciences Panel Reports: Marine resources and legal-political arrangements for their development United States. Engel,Brigitte Röder,Xiaolan Fu,Gui Xue,2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many

separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience *Foundations of Space Biology and Medicine: Space as a habitat* ,1975
