Molecularizing Biology And Medicine New Practices And Alliances 1930s To 1970s:

Molecularizing Biology and Medicine Soraya de Chadarevian, Harmke Kamminga, 2003-09-02 The contributors present a coherent set of case studies of practices technologies and strategies aimed at the isolation investigation manipulation production and uses of molecules including vitamins hormones blood products antibiotics and vaccines These case studies examine how processes of molecularization were set in motion in the inter war period how they were used as a resource in the biomedical mobilization of World War II and how new alliances and strategies created as part of the war effort played a central role in the reorganisation of biomedicine in the post war period , **Human Heredity in the Twentieth Century** Bernd Gausemeier, 2015-10-06 The essays in this collection examine how human heredity was understood between the end of the First World War and the early 1970s The contributors explore the interaction of science medicine and society in determining how heredity was viewed across the world during the politically turbulent years of the twentieth century *Radium and the Secret of Life* Luis A. Campos, 2015-04-03 Before the hydrogen bomb indelibly associated radioactivity with death many chemists physicians botanists and geneticists believed that radium might hold the secret to life Physicists and chemists early on described the wondrous new element in lifelike terms such as decay and half life and made frequent references to the natural selection and evolution of the elements Meanwhile biologists of the period used radium in experiments aimed at elucidating some of the most basic phenomena of life including metabolism and mutation From the creation of half living microbes in the test tube to charting the earliest histories of genetic engineering *Radium and the Secret of Life* highlights previously unknown interconnections between the history of the early radioactive sciences and the sciences of heredity Equating the transmutation of radium with the biological transmutation of living species biologists saw in metabolism and mutation properties that reminded them of the new element These initially provocative metaphoric links between radium and life proved remarkably productive and ultimately led to key biological insights into the origin of life the nature of heredity and the structure of the gene *Radium and the Secret of Life* recovers a forgotten history of the connections between radioactivity and the life sciences that existed long before the dawn of molecular biology **Old Age, New Science** Hyung Wook Park, 2016-03-09 Between 1870 and 1940 life expectancy in the United States skyrocketed while the percentage of senior citizens age sixty five and older more than doubled a phenomenon owed largely to innovations in medicine and public health At the same time the Great Depression was a major tipping point for age discrimination and poverty in the West seniors were living longer and retiring earlier but without adequate means to support themselves and their families The economic disaster of the 1930s alerted scientists who were actively researching the processes of aging to the profound social implications of their work and by the end of the 1950s the field of gerontology emerged *Old Age New Science* explores how a group of American and British life scientists contributed to gerontology s development as a multidisciplinary field It examines the foundational biosocial visions they shared a byproduct of both their

research and the social problems they encountered Hyung Wook Park shows how these visions shaped popular discourses on aging directly influenced the institutionalization of gerontology and also reflected the class gender and race biases of their founders

The Past, Present, and Future of Integrated History and Philosophy of Science Emily Herring, Kevin Jones, Konstantin Kiprijanov, Laura Sellers, 2019-05-14 Integrated History and Philosophy of Science iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS

Biomedicine in the Twentieth Century: Practices, Policies, and Politics Caroline Hannaway, 2008-02-15 Biomedicine in the Twentieth Century Practices Policies and Politics is a testimony to the growing interest of scholars in the development of the biomedical sciences in the twentieth century and to the number of historians social scientists and health policy analysts now working on the subject The book is comprised of essays by noted historians and social scientists that offer insights on a range of subjects that should be a significant stimulus for further historical investigation It details the NIH s practices policies and politics on a variety of fronts including the development of the intramural program the National Institute of Mental Health and mental health policy the politics and funding of heart transplantation and the initial focus of the National Cancer Institute Comparisons can be made with the development of other American and British institutions involved in medical research such as the Rockefeller Institute and the Medical Research Council Discussions of the larger scientific and social context of United States federal support for research the role of lay institutions in federal funding of virus research the consequences of technology transfer and patenting the effects of vaccine and drug development and the environment of research discoveries all offer new insights and suggest questions for further exploration

The Handbook of Food Research Anne Murcott, Warren Belasco, Peter Jackson, 2013-08-15 The last 20 years have seen a burgeoning of social scientific and historical research on food The field has drawn in experts to investigate topics such as the way globalisation affects the food supply what cookery books can and cannot tell us changing understandings of famine the social meanings of meals and many more Now sufficiently extensive to require a critical overview this is the first handbook of specially commissioned essays to provide a tour d horizon of this broad range of topics and disciplines The editors have enlisted eminent researchers across the social sciences to illustrate the debates concepts and analytic approaches of this widely diverse and dynamic field This volume will be essential reading a ready to hand reference book surveying the state of the art for anyone involved in and actively concerned about research on the social political economic psychological geographic and historical aspects of food It will cater for all who need to be informed of research that has been done and that is being done

The Story of Taxol Jordan Goodman, Vivien

Walsh,2001-03-05 Taxol is arguably the most celebrated talked about and controversial natural product in recent years It is celebrated because of its efficacy as an anti cancer drug and because its discovery has provided powerful support for policies concerned with biodiversity talked about because in the late 1980s and early 1990s the American public was bombarded with news reports and special programmes about the molecule and its host the Pacific yew and controversial because during the early 1990s the drug and the tree became embroiled in a number of very sensitive political issues with wide implications for the conduct of public policy The Story of Taxol tells this story **Crafting Immunity** Jennifer Keelan,2017-03-02 Immunity is as old as illness itself yet historians have only just begun to take up the challenge of reconstructing the modern transformation of attempts to protect against disease Crafting Immunity assembles in one volume the most recent efforts of an international group of scholars to place the diverse practices of immunity in their historical contexts It is this diversity that provides the book with its greatest source of strength Collectively the papers in this volume suggest that it was the craft like small scale and local conditions of clinical medicine that turned the immunity of individuals and populations into biomedical objects That is to say the modern conception of immunity was at least as much the product of the work of healing as it was the systematic result of discoveries about the immune system Working outside the narrow confines of laboratory histories Crafting Immunity is the first attempt to set the problems of immunity into a variety of social technological institutional and intellectual contexts It will appeal not only to historians and sociologists of health but also to social and cultural historians interested in the biomedical creation of modern health regimens
