[Monarchs in a Changing World](#) Karen S. Oberhauser,Kelly R. Nail,Sonia Altizer,2015-11-16 Monarch butterflies are among the most popular insect species in the world and are an icon for conservation groups and environmental education programs. Monarch caterpillars and adults are easily recognizable as welcome visitors to gardens in North America and beyond, and their spectacular migration in eastern North America from breeding locations in Canada and the United States to overwintering sites in Mexico has captured the imagination of the public. Monarch migration behavior and chemical ecology have been studied for decades. Yet many aspects of monarch biology have come to light in only the past few years. These aspects include questions regarding large-scale trends in monarch population sizes, monarch interactions with pathogens and insect predators, and monarch molecular genetics and large-scale evolution. A growing number of current research findings build on the observations of citizen scientists who monitor monarch migration, reproduction, survival, and disease. Monarchs face new threats from humans as they navigate a

changing landscape marked by deforestation pesticides genetically modified crops and a changing climate all of which place the future of monarchs and their amazing migration in peril To meet the demand for a timely synthesis of monarch biology conservation and outreach *Monarchs in a Changing World* summarizes recent developments in scientific research highlights challenges and responses to threats to monarch conservation and showcases the many ways that monarchs are used in citizen science programs outreach and education It examines issues pertaining to the eastern and western North American migratory populations as well as to monarchs in South America the Pacific and Caribbean Islands and Europe The target audience includes entomologists population biologists conservation policymakers and K 12 teachers

Monarchs and Milkweed Anurag Agrawal, 2017-03-28 The fascinating and complex evolutionary relationship of the monarch butterfly and the milkweed plant Monarch butterflies are one of nature's most recognizable creatures known for their bright colors and epic annual migration from the United States and Canada to Mexico Yet there is much more to the monarch than its distinctive presence and mythic journeying In *Monarchs and Milkweed* Anurag Agrawal presents a vivid investigation into how the monarch butterfly has evolved closely alongside the milkweed a toxic plant named for the sticky white substance emitted when its leaves are damaged and how this inextricable and intimate relationship has been like an arms race over the millennia a battle of exploitation and defense between two fascinating species The monarch life cycle begins each spring when it deposits eggs on milkweed leaves But this dependency of monarchs on milkweeds as food is not reciprocated and milkweeds do all they can to poison or thwart the young monarchs Agrawal delves into major scientific discoveries including his own pioneering research and traces how plant poisons have not only shaped monarch milkweed interactions but have also been culturally important for centuries Agrawal presents current ideas regarding the recent decline in monarch populations including habitat destruction increased winter storms and lack of milkweed the last one a theory that the author rejects He evaluates the current sustainability of monarchs and reveals a novel explanation for their plummeting numbers Lavishly illustrated with more than eighty color photos and images *Monarchs and Milkweed* takes readers on an unforgettable exploration of one of nature's most important and sophisticated evolutionary relationships

THE TRUTH OF THE ORIGIN OF THE UNIVERSE Sabrie Soloman, 2024-06-12 Matured Creation Finely Tuned Earth The concept of a matured creation and a finely tuned Earth is a fascinating topic that has sparked much debate in the realms of science religion and philosophy Proponents of this idea argue that the universe and the Earth were created in a state of maturity and perfection with all the necessary conditions for life to thrive One of the key arguments for a matured creation is the idea of fine tuning in the universe This concept suggests that the fundamental physical constants and laws of nature are precisely calibrated to allow for the existence of life as we know it For example if the strength of gravity or the electromagnetic force were even slightly different life as we know it would not be possible This level of precision has led some to suggest that a higher power must have orchestrated the creation of the universe with the express purpose of allowing life to flourish on Earth Moreover the Earth itself is viewed as a finely tuned machine that provides the perfect conditions for life From the composition of the atmosphere to the distance of our planet from the sun everything seems to be finely calibrated to allow for the existence of living organisms The intricate ecosystems that exist on Earth further demonstrate the complexity and harmony of this finely tuned planet

The Math Instinct Keith Devlin, 2009-04-29 There are two kinds of math the hard kind and the easy kind The easy kind practiced by ants shrimp Welsh corgis and us is innate What innate calculating skills do we humans have Leaving aside built in mathematics such as the visual system ordinary people do just fine when faced with mathematical tasks in the course of the day Yet when they are confronted with the same tasks presented as math their accuracy often drops But if we have innate mathematical ability why do we have to teach math and why do most of us find it so hard to learn Are there tricks or strategies that the ordinary person can do to improve mathematical ability Can we improve our math skills by learning from dogs cats and other creatures that do math The answer to each of these questions is a qualified yes All these examples of animal math suggest that if we want to do better in the formal kind of math we should see how it arises from natural mathematics From NPR's Math Guy The Math Instinct will provide even the most number phobic among us with confidence in our own mathematical abilities
