Moneyshock Ten Ways The Financial Marketplace Is Transforming Our Lives:

Transnational Capital and Class Fractions Bob Jessop, Henk Overbeek, 2018-08-14 Emerging in the late 1970s the Amsterdam School's AS most distinctive contribution to international political economy was the systematic incorporation of the Marxian concept of capital fractions into the study of international politics. Contending that politics in advanced capitalist countries takes place in a fundamentally transnationalized space in which the distinction between domestic and international has blurred, it shows how in this space politics is structured by competing comprehensive concepts of control. Presenting a concise and instructive introduction to the origins, development and significance of this distinct approach, this book provides a unique overview of the School's contemporary significance for the field. Offering a new generation of critical scholars the opportunity to become acquainted at first hand with some of the contributions that have shaped the work of the AS, the contributions present critical commentaries discussing the merits and shortcomings of the AS from a variety of perspectives and undertake a self-critical evaluation of the current place and value of the AS framework in the broader landscape of approaches to the study of contemporary capitalism. Written for scholars and students alike, it will be of interest to those working in international political economy, international relations and political science, political sociology, European studies and branches of academic economics such as regulation theory and institutional economics. **Globalization,**

Democratization and Multilateralism Stephen Gill, 2016-07-27 Globalization involves structural changes in forms of state, society and culture, ecology and political economy and in ethics and expectations. In this collection, globalization and multilateralism are linked to questions of epistemology, ontology and strategy. Epistemology entails critical questioning of the nature of knowledge and its foundations. Ontology concerns the significant factors in global political economy. Strategy involves how to move world affairs from its present condition towards normative goals enunciated in the MUNS programme so as to promote collective ability to channel structural change in a more democratic direction. *States of Emergency* Kees van der Pijl, 2022-01-01 Brilliantly researched, impeccably sourced, the story is told in an engaging style and with great analytical acuity. Here is a dire warning against the slide into authoritarianism. WILLIAM I. ROBINSON, Distinguished Prof of Sociology, UC Santa Barbara. Ever since large parts of the world were placed in lockdown in March 2020 in the name of public health, there has been a growing public suspicion that some sort of global seizure of power and social transformation is being implemented under guise of the extraordinary suspension of democracy and unprecedented restrictions of basic freedoms occurring in so many countries at the same time. This book contends that since the financial collapse of 2008, populations in many countries have become restive in the face of extreme inequality and diminishing life chances. In a digital economy, one to two billion people will soon be superfluous, but they are not likely to remain sitting on their hands. In many parts of the world, their resistance has begun. The Western capitalist elites have lost the capacity to engage their respective peoples in an equitable social contract and have resorted to stoking fear from the terrorism scare and the Russian threat to
