theragnostic applications in cancer and neurodegenerative diseases this book emphasizes the future of a cell free approach in regenerative medicine This book is a useful resource for researchers and students in regenerative medicine Key Features Provides insights into EV based therapies and their role in regenerative medicine across multiple medical fields Discusses the potential of mesenchymal stem cell derived exosomes in treating neurodegenerative ophthalmological and cardiovascular conditions Explores cell free scaffolding for targeted tissue and organ regeneration Reviews the current regulatory production and clinical challenges in bringing cell free therapies to market Explores cutting edge theragnostic applications of EVs in oncology and neurological disorders

Monitoring Stem Cell Research, 2003 *Stem Cell Research* Janet T. Arnes, 2006 Embryonic stem cells have the ability to develop into virtually any cell in the body and may have the potential to treat medical conditions such as diabetes and Parkinson s disease In August 2001 President Bush announced that for the first time federal funds would be used to support research on human embryonic stem cells but funding would be limited to existing stem cell lines The National Institutes of Health NIH has established the Human Embryonic Stem Cell Registry which lists stem cell lines that are eligible for use in federally funded research Although 78 cell lines are listed 21 embryonic stem cell lines are currently available Scientists are concerned about the quality longevity and availability of the eligible stem cell lines For a variety of reasons many believe research advancement requires new embryonic stem cell lines and for certain applications stem cells derived from cloned embryos may offer the best hope for progress in understanding and treating disease A significant cohort of pro life advocates support stem cell research those opposed are concerned that the isolation of stem cells requires the destruction of embryos Letters from Congress one signed by 206 Members of the House and a second signed by 58 Senators have been sent urging President Bush to expand the current federal policy concerning embryonic stem cell research Some have argued that stem cell research be limited to adult stem cells obtained from tissues such as bone marrow They argue that adult stem cells should be pursued instead of embryonic stem cells because they believe the derivation of stem cells from either embryos or aborted fetuses is ethically unacceptable Other scientists believe adult stem cells should not be the sole target of research because of important scientific and technical limitations Groups make ethical distinctions in the debate on how to proceed with stem cell research based upon embryo protection relief of suffering viability the purpose and timing of embryo creation and destruction donor consent scientific alternatives federal funding and cloning Other countries are moving fast with active research programs This book presents the current confused situation along with a selective bibliography

The California Institute for Regenerative Medicine

Institute of Medicine, Board on Health Sciences Policy, Committee on a Review of the California Institute for Regenerative Medicine, 2013-02-27 The California Institute for Regenerative Medicine CIRM was created in 2005 by The California Stem Cell Research and Cures Act Proposition 71 to distribute 3 billion in state funds for stem cell research The passage of Proposition 71 by the voters of California occurred at a time when federal funding for research involving human embryonic stem cells was uncertain given the ethical questions raised by such research During its initial period of operations CIRM has successfully and thoughtfully provided more than 1.3 billion in awards to 59 California institutions consistent with its stated mission As it transitions to a broadened portfolio of grants to stimulate progress toward its translational goals the Institute should obtain cohesive longitudinal and integrated advice restructure its grant application review process and enhance industry representation in aspects of its operations CIRM's unique governance structure while useful in its initial stages might diminish its effectiveness moving forward The California Institute for Regenerative Medicine Science Governance and the Pursuit of Cures recommends specific steps to enhance CIRM's organization and management as well as its scientific policies and processes as it transitions to the critical next stages of its research and development program

The Republican War on Science

Chris Mooney, 2007-03-16 Science has never been more crucial to deciding the political issues facing the country

Yet science and scientists have less influence with the federal government than at any time since the Eisenhower administration. In the White House and Congress today findings are reported in a politicized manner spun or distorted to fit the speaker's agenda or when they're too inconvenient ignored entirely. On a broad array of issues stem cell research, climate change, missile defense, abstinence education, product safety, environmental regulation and many others the Bush administration's positions fly in the face of overwhelming scientific consensus. Federal science agencies once fiercely independent under both Republican and Democratic presidents are increasingly staffed by political appointees and fringe theorists who know industry lobbyists and evangelical activists far better than they know the science. This is not unique to the Bush administration but it is largely a Republican phenomenon born of a conservative dislike of environmental health and safety regulation and at the extremes of evolution and legalized abortion. In *The Republican War on Science* Chris Mooney ties together the disparate strands of the attack on science into a compelling and frightening account of our government's increasing unwillingness to distinguish between legitimate research and ideologically driven pseudoscience.
