Lowdown Jude Warne, David Paich, 2025-04-08 Boz Scaggs has always been a musical artist of complexity Boz Scaggs founded his connection to music through the blues but his lasting legacy is one of glamorous and romantic pop songwriting He possessed a somewhat shy and sensitive demeanor never totally at home in the public eye yet his claim to several chart topping singles and albums particularly the millions selling and critically acclaimed Silk Degrees 1976 demanded constant exposure The persona he expressed through his music was laid back effortlessly cool sophisticated stylish romantically charming and suave But the immense success he achieved in his career pointed in part to the driven and determined artist within Lowdown The Music of Boz Scaggs examines the uniqueness of these contradictions and Boz Scaggs's sixty plus year career and his rich and diverse musical catalogue Over the decades Scaggs collaborated with an array of talented heavies from the Steve Miller Band to the Muscle Shoals Rhythm Section which included a young Duane Allman on Boz Scaggs 1969 from the session players on Silk Degrees 1976 who would form the hit band Toto to Donald Fagen and Michael McDonald on the Dukes of September's 2010 Rhythm Revue tour This first ever book on Boz is constructed around intensely thorough analysis of his complete discography and new and exclusive in depth interviews with a selection of Scaggs's associated colleagues from his vast career

Animal Psychophysics: the design and conduct of sensory experiments William C. Stebbins, 2013-11-21 In May of 1969 the contributors to this book gathered at the University of Michigan in Ann Arbor for three days to talk about their work in the behavioral analysis of animal sensory function and to share their research experiences in the laboratory with particular emphasis on methodology in behavioral training testing and instrumentation It was their feeling and mine as a consequence of this meeting that we had sufficient substance to justify a book which we hoped would be of interest and even of pragmatic value to any biologic or biomedical scientist whose work deals with sensory function Clearly there is no aspect of an organism's behavior that is not to some extent controlled by environmental stimuli In recent years due in large part to technical advances in microscopy and histology and in electrophysiology there have been several extremely informative published proceedings from conferences and symposia concerned with some of the early and very basic stages in the reception of environmental energy by the sense organs and its processing by the nervous system Transduction at the receptor and stimulus coding by the nervous system cell membrane changes and the basic structure of the receptor and related tissue as seen through the electron and phase contrast microscope have received major attention and exciting new discoveries in sensory function and structure have been reported Ultimately such discoveries must be related to an intact behaving organism
