*Monoclonal Antibodies and Cancer* Barbara D. Boss, 1983      **Cancer Chemotherapy and Selective Drug**

**Development** K.R. Harrap, W. Davis, A.H. Calvert, 2012-12-06 Over the past 30 years many significant advances have been made in the management of a number of disseminated malignant diseases The prognosis for diseases such as childhood leukaemia choriocarcinoma and Hodgkin's disease has gradually been transformed as better anti tumour agents have become available and their clinical use has been refined During the past 10 years the advent of new agents particularly cisplatin bleomycin and the podophyllotoxins has allowed the cure of disseminated testicular tumours This degree of success has not however been achieved in the case of a number of other common cancers Ovarian carcinoma is tantalisingly chemo sensitive and although there are long term survivors from disseminated disease these are only a small proportion of the total Breast cancer although sensitive to a multitude of drugs appears to have yielded neither survival benefit nor cure to the efforts of therapists while tumours such as those of the colon remain stubbornly unresponsive Against this backdrop it is apparent that additional more selective treatments are needed if further impact is to be made on the problem of cancer The development of such agents requires the integration of a multidisciplinary effort encompassing the fields of chemistry biology and medicine This symposium provided a forum for clinical and preclinical scientists where current aspects of cancer treatment were reviewed and approaches to the development of a new generation of more selective anticancer drugs discussed      *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),      Current Catalog National Library of Medicine (U.S.),      **Receptor-Mediated Targeting of Drugs** G. Gregoriadis, 2013-06-29 Conventional attempts to control cell behaviour and function are often marred by the toxicity of the drugs used their premature waste or inactivation or by their inability to interact with or reach target sites efficiently New trends in pharmacology emphasise the development of methods for the optimization of drug action for instance by the delivery of drugs enzymes hormones antigens genetic material etc through carrier systems selectively to relevant cellular and subcellular sites A wide assortment of carriers was discussed in the first NATO Advanced Studies Institute ASI Targeting of Drugs the proceedings of which were published by Plenum Press in 1982 eds G Gregoriadis J Senior and A Trouet This book containing the proceedings of the 2nd NATO ASI Receptor Mediated Targeting of Drugs held again at Cape Sounion Greece during 20 June 1 July 1983 deals with drug delivery through systems possessing ligands which can recognize and interact with receptors on the target's surface Receptor recognizing carriers that have recently given promise of realistic expectations in targeting include monoclonal antibodies certain proteins that home to specific cells in the body and liposomes either as such when they can trigger specific reactions in the reticuloendothelial system or in association with targeting macromolecules Each of these are discussed extensively by leading authorities in terms of applications in biology and medicine and related methodologies

**Radioimmunoassay in Basic and Clinical Pharmacology** Carlo Patrono,Bernhard A. Peskar,2012-12-06

Thirty years have elapsed since the first description by S A BERNSON and R S YALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present 12 10 in body fluids at concentrations as low as  $10^{-10}$  M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr YALOW 10 years ago Although several excellent books have been published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators
