Caesar's Calendar Denis Feeney, 2007-06-04 The ancient Romans changed more than the map of the world when they conquered so much of it they altered the way historical time itself is marked and understood In this brilliant erudite and exhilarating book Denis Feeney investigates time and its contours as described by the ancient Romans first as Rome

positioned itself in relation to Greece and then as it exerted its influence as a major world power Feeney welcomes the reader into a world where time was movable and changeable and where simply ascertaining a date required a complex and often contentious cultural narrative In a style that is lucid fluent and graceful he investigates the pertinent systems including the Roman calendar which is still our calendar and its near perfect method of capturing the progress of natural time the annual rhythm of consular government the plotting of sacred time onto sacred space the forging of chronological links to the past and above all the experience of empire by which the Romans meshed the city state s concept of time with those of the foreigners they encountered to establish a new worldwide web of time Because this web of time was Greek before the Romans transformed it the book is also a remarkable study in the cross cultural interaction between the Greek and Roman worlds Feeney s skillful deployment of specialist material is engaging and accessible and ranges from details of the time schemes used by Greeks and Romans to accommodate the Romans unprecedented rise to world dominance to an edifying discussion of the fixed axis of B C A D or B C E C E and the supposedly objective dates implied He closely examines the most important of the ancient world s time divisions that between myth and history and concludes by demonstrating the impact of the reformed calendar on the way the Romans conceived of time s recurrence Feeney s achievement is nothing less than the reconstruction of the Roman conception of time which has the additional effect of transforming the way the way the reader inhabits and experiences time

offers both students and teachers of ancient Greek religion a comprehensive overview of the current state of scholarship in the subject from the Archaic to the Hellenistic periods. It not only presents key information but also explores the ways in which such information is gathered and the different approaches that have shaped the area. In doing so, the volume provides a crucial research and orientation tool for students of the ancient world and also makes a vital contribution to the key debates surrounding the conceptualization of ancient Greek religion. The handbook's initial chapters lay out the key dimensions of ancient Greek religion: approaches to evidence and the representations of myths. The following chapters discuss the continuities and differences between religious practices in different cultures, including Egypt, the Near East, the Black Sea, and Bactria and India. The range of contributions emphasizes the diversity of relationships between mortals and the supernatural in all their manifestations across between and beyond ancient Greek cultures and draws attention to religious activities as dynamic, highlighting how they changed over time, place, and context.

The Jewish Calendar Controversy of 921/2 CE Sacha Stern, 2019-09-02. In the year 921/2, the Jewish leaders of Palestine and Babylonia disagreed on how to calculate the calendar. This led the Jews of the entire Near East to celebrate Passover and the other festivals through two years on different dates. The controversy was major but it became forgotten until its late 19th-century rediscovery in the Cairo Geniza. Faulty editions of the texts in the following decades led to much misunderstanding about the nature, leadership, and aftermath of the controversy. In this book, Sacha Stern re-edits the texts, completely discovers many new Geniza sources, and challenges the historical consensus. This book sheds light on early medieval Rabbanite leadership and controversies and on the processes that eventually led to the standardization of the medieval Jewish calendar.

Calendars and Years John M. Steele, 2007-10-08. Dates form the backbone of written history. But where do these dates come from? Many different calendars were used in the ancient world. Some of these calendars were based upon observations or calculations of regular astronomical phenomena such as the first sighting of the new moon crescent that defined the beginning of the month in many calendars, while others incorporated schematic simplifications of these phenomena such as the 360-day year used in early Mesopotamian administrative practices in order to simplify accounting procedures. Historians frequently use handbooks and tables for converting dates in ancient calendars into the familiar BC/AD calendar that we use today. But very few historians understand how these tables have come about or what assumptions have been made in their construction. The seven papers in this volume provide an answer to the question: what do we know about the operation of calendars in the ancient world and just as importantly, how do we know it? Topics covered include the ancient and modern history of the Egyptian 365-day calendar, astronomical and administrative calendars in ancient Mesopotamia, and the development of astronomical calendars in ancient Greece. This book will be of interest to ancient historians, historians of science, astronomers who use early astronomical records, and anyone with an interest in calendars and their development.

Collaborative Computing: Networking, Applications and Worksharing Elisa Bertino, James Joshi, 2009-07-25. CollaborateCom is an annual

international forum for dissemination of original ideas and research results in collaborative computing networks systems and applications A major goal and feature of CollaborateCom is to bring researchers from networking systems CSCW collaborative learning and collaborative education areas together CollaborateCom 2008 held in Orlando Florida was the fourth conference of the series and it reflects the accelerated growth of collaborative computing both as research and application areas Concretely recent advances in many computing fields have contributed to the growing interconnection of our world including multi core architectures 3G 4G wireless networks Web 2.0 technologies computing clouds and software as a service just to mention a few The potential for collaboration among various components has exceeded the current capabilities of traditional approaches to system integration and interoperability As the world heads towards unlimited connectivity and global computing collaboration becomes one of the fundamental challenges for areas as diverse as eCommerce eGovernment eScience and the storage management and access of information through all the space and time dimensions We view collaborative computing as the glue that brings the components together and also the lubricant that makes them work together The conference and its community of researchers demonstrate the concrete progress we are making towards this vision The conference would not have been successful without help from so many people
