interest to those who have counselling or care giving roles An attentional resource model of homesickness experience is developed and the implications for self help and counselling are considered The book will also be of interest to cognitive psychologists since investigation of the cognitive basis of homesickness provides information into the way in which planning processes operate and in this sense there is a contribution to the understanding of cognitive factors in change and transition

Secret Science Ulf Schmidt,2015-07-09 From the early 1990s allegations that servicemen had been duped into taking part in trials with toxic agents at top secret Allied research facilities throughout the twentieth century featured with ever greater frequency in the media In Britain a whole army of over 21 000 soldiers had participated in secret experiments between 1939 and 1989 Some remembered their stay as harmless but there were many for whom the experience had been all but pleasant sometimes harmful and in isolated cases deadly Secret Science traces for the first time the history of chemical and biological weapons research by the former Allied powers particularly in Britain the United States and Canada It charts the ethical trajectory and culture of military science from its initial development in response to Germany's first use of chemical weapons in the First World War to the ongoing attempts by the international community to ban these types of weapons once and for all It asks whether Allied and especially British warfare trials were ethical safe and justified within the prevailing conditions and values of the time By doing so it helps to explain the complex dynamics in top secret Allied research establishments the desire and ability of the chemical and biological warfare corps largely comprised of military officials scientists and expert civil servants to construct and identify a never ending stream of national security threats which served as flexible justification strategies for the allocation of enormous resources to conducting experimental research with some of the most deadly agents known to man Secret Science offers a nuanced non judgemental analysis of the contributions made by servicemen scientists and civil servants to military research in Britain and elsewhere not as passive helpless victims without voices or as laboratory and desk perpetrators without a conscience but as history's actors and agents of their own destiny As such it also makes an important contribution to the burgeoning literature on the history and culture of memory

Ambition ,1919 The Health of Our Educators ,2005 South Africa has a severe HIV AIDS epidemic About 5 6 million South Africans the majority of whom are in the economically active age group are currently living with the virus Studies have been conducted to examine the impact of HIV AIDS on various sectors of the economy including mining manufacturing health and education The effectiveness and functioning of the public sector is also increasingly threatened by the HIV AIDS epidemic The education sector is thought to be particularly affected by HIV AIDS because both the demand for and supply of educators are affected Not only do children drop out of school because of HIV AIDS thus reducing demand for educators but educators school managers and education policy makers are said to be dying of AIDS thus reducing supply The Cure Within: A History of Mind-Body Medicine Anne Harrington,2009-01-27 People suffering from serious illnesses improve their survival chances by adopting a positive attitude and refusing to believe in the worst Stress is the great killer of modern life

Ancient Eastern mind body techniques can bring us balance and healing We ve all heard claims like these and many find them plausible When it comes to disease and healing we believe we must look beyond doctors and drugs we must look within ourselves Faith relationships and attitude matter But why do we believe such things From psychoanalysis to the placebo effect to meditation this vibrant history describes our commitments to mind body healing as rooted in a patchwork of stories that have allowed people to make new sense of their suffering express discontent with existing care and rationalize new treatments and lifestyles These stories are sometimes supported by science sometimes quarrel with science but are all ultimately about much more than just science
