Psychological Aspects Of Early Breast Cancer:

Psychological Aspects of Early Breast Cancer Colette Ray, Michael Baum, 2013-03-07 Physical illness cannot be effectively treated other than in the context of the psychological factors with which it is associated The body may have the disease but it is the patient who is ill Research psychologists from a number of different backgrounds have in the past few decades turned increasingly to the study of physical illness and there is now an extensive literature on preventive behaviors the role of stress in the etiology of illness the patient's reactions to illness and its treatment and the physician patient relationship At the same time practicing clinical psychologists have extended their concern beyond the treatment of specifically psychiatric disorders to include also the psychological care of people experiencing distress through illness or injury Traditionally these patients have tended to fall through the net unless their distress is so great that it assumes the proportion of a psychiatric disorder that can then be treated in its own right Because the physical disorder is the primary one its existence has detracted from the salience of the very real emotional disturbance to which it can give rise Moreover emotional reactions in this setting being the norm seems to have been regarded as not meriting special attention and care This situation is changing and it is not just psychologists or psychiatrists who are responsible for the shift in attitudes Within general medicine itself there is now a renewed emphasis on the care of the whole patient and not just the disease

Current Bibliographies in Medicine, 1988 Breast Cancer Andrew Clark, Lesley Fallowfield, 2002-05-03 For many women breast cancer is one of the most distressing of all diseases *Breast Cancer* examines the effects of the disease through all stages of diagnosis and treatment Making extensive use of verbatim accounts by women of their experiences it intersperses these with relevant findings and theories from recent scientific research The book's **Current Issues in Clinical Psychology** Eric Karas, 2012-12-06 This is the third volume in the series of books based on the Annual Merseyside

Course in Clinical Psychology In common with its predecessors its aim is to present a number of topics of interest to practitioners researchers trainers and trainees in the field with the intent not only to inform but variously also to question and to guide further enquiry Selection for this volume has taken a somewhat different stance to the previous two Whereas in former volumes an attempt has been made to cover standard areas of general and scientific interest to psychologists and others in related professions such as anorexia nervosa forensic issues long term care mental handicap community psychology anxiety and depression in this one issues which are of equal relevance but not necessarily of equal prominence in psychological texts are included We have not however neglected those areas more readily recognized as of major clinical import which are being progressively covered in this series This year we have the section Bereavement and the Care of the Dying Although for many this may not be a main focus it is a subject that few helpers do not encounter either directly or indirectly with their clients It would be impossible for this subject to not reflect the most human side of the caring professions and it is perhaps in this field that the objective subjective dilemma of the clinician can be seen in its most acute form

Advances in Environmental Psychology (Volume 5) Andrew Baum,Jerome E. Singer,2020-09-10 The development of a field or an area of inquiry is often marked by changes in measurement techniques shifts in analytic emphasis and disputes over the best ways of doing research In many areas of psychology a number of issues have characterized methodological evolution of the discipline including questions regarding context and reductionism or laboratory versus field research For some of the newer areas in psychology such as environment or health psychology this is not an issue of either or Although there has been some debate about these trade offs it is generally regarded by people in this field that some combination of the two approaches is essential Depending on the question being studied this balance may change However the questions asked are less likely to inquire which way is better and concentrate on how both may be used This observation serves to illustrate the fact that different research endeavours have different methodological issues Originally published in 1985 this volume explores some of the issues characterizing work on health environment and behavior
